

INDEX

- act meaning, 85, 87
 action meaning, 85–86
 activity duration, 103–104
 activity frequency, 103
 activity organization, 102–105, 160–61
 activity placement studies, 160–61
 activity regularity, 104
 acts and actions, 85–87
 agriculture, and ceramic production, 26
amarillo clays *and see* clays, 22
 archaeological interpretation, 83–87, 156, 159
 and assemblage size, 71–72
 and production areas, 87–91
 and specialization, 152–53
 ashtrays, 46–47, 117
 assemblage size,
 and access, 67–72
 and archaeological interpretation, 71–72
 and household size, 66–67
 variability, 76–78
 availability of vessels, 67–72
- Bascascaltepec, 15
 breakage rates, 56–57
- cazuelas*, 45, 46, 69, 70, 117
 use life, 73–77
 vessel frequency, 62–63
 ceramic ecology, 3–5
 ceramic production,
 definition of theory, 3–4
 evaluation of, 2–3
 learning the craft, 28–30
chimoleras, 45, 117
 Chuniapan de Abajo, 15
cineros, 46–47, 117
 circle of interpretation, 86–87
 clay:temper ratios, 38–39
 clays,
 acquisition, 21–23, 32–33
 consumption rates, 38
 deposits, 20–22
 processing, 36–39
 properties, 21
 color and durability, 22–23
 climate *and see* precipitation, weather conditions,
 5, 11, 16–20, 33
 coffee consumption, 65
colorado clay *and see* clays, 22, 38–39
comales, 44, 69, 116–17
 production of, 41, 42–32
 use life, 73, 74–77
 vessel frequency, 62–63
 Comoapan *see* Maticapan
 competition, and standardization, 96–98
 costs,
 of production, 56, 91
 of replacement, 74
 curation, and vessel use life, 78–79
- debitage analysis and data interpretation, 153–56
 distances,
 to clay sources, 21–23
 to firing areas, 110–12
 to fuel sources, 25–26
 to temper sources, 24–25
 diversity of production, 48–50
 domestic production *see* household production
 drying of vessels, 50–51
- ejido*, 26
 ethnoarchaeology, definition, 4
 excavation evidence, 113–18, 145–51
 experimentation, and standardization, 96–98
- firing *and see* kilns, open firing, 35, 51–60
 breakage rates, 56–57
 excavation evidence, 113–18
 and fuel availability, 59–60
 location of, 104, 110–13
 patterns of, 158
 and precipitation, 58–59
 and spatial organization, 107–13
 temperatures, 52–53, 55
 variability, 57–60
 vessel arrangement, 53, 54
 firing loss, 56–57
 flowerpots, 48
 food preparation, 61, 64–65
frideras see cazuelas
 fuel for firing, 25–26, 32–33, 59–60
 burning temperatures, 53, 55
 quality, 32–33, 37
- hornos and see* kilns, 54–56
 household industry, 92–93
 household production, 92
 household size,
 and assemblage size, 66–67
 and production frequency, 30–33
 and production space, 105
 and vessel frequency, 62–65, 66

Index

176

- houselot maintenance,
 and refuse areas, 122–24
 and refuse distribution, 136
 houselot size, and drying of vessels, 51
incensarios, 47
jugetes, 47
 kilns *and see* firing, 54–56, 108–109
 construction of, 145
 excavation evidence, 113–18, 145
 identification of, 88
 labor allocation, 26, 30–33, 93–93, 104–105
 land use, 26
 Los Tuxtlas, 11–12, 15
maceteras, 48
 manufactory, 94
 Matacapán, ceramic production study, 142–51,
 159
 material technology, and ceramic production,
 100, 102
 middle-range theory, 1, 153, 154
 formulation, 157–58
 and spatial organization, 3–4, 5–7
 molds, 42, 96
molinos, vessel frequency, 65
 mushroom stones, 88
negro clays and see clays, 22–23
 nucleated workshops, 94
 objectivity, 154–56
ollas de frijol, 454–46, 117
 use life, 73–77, 79
 vessel frequency, 62, 64
ollas de maíz, 45–46, 70
 use life, 73–77, 78–79
 vessel frequency, 62, 64, 65
 open firing *and see* firing, 52–53, 56
 excavation evidence, 117–18
 and weather conditions, 108
 organizational structures, 100–102
palanganas and see molds, 42
palmeado, production of, 42–44
parado, production of, 39–42, 44
 participation, 104–105
 patterning, 84–85
pinatas, 47
 populations *and see* household size, 13
 precipitation *and see* climate, weather conditions,
 16, 18–20
 and firing, 58–59
 prices *and see* costs, 56, 91
 production areas, identification of, 87–91
 production,
 costs, 56, 91
 frequency, 26–28, 30–33, 44, 49–50, 105–107
 interpretation of, 91–92
 labor allocation, 30–33
 organization of, 99–105, 147–51
 scales of, 91, 92–95, 102
 spatial organization, 101–102, 105–109
 techniques, 39–44
 time taken, 42, 95, 103–104
 variability, 77–78
 provisional discard, 121–22
 rainfall *see* precipitation
 refuse *and see* residues,
 areas for, 122–27
 deposit size, 124
 disposal of, 121–27
 distribution, 120–21, 124–27, 136, 147–48,
 158
 material size and distribution, 127–37
 provisional discard, 121–22
 replacement costs, 74
 residues of production *and see* refuse,
 disposal of, 104
 and identification of production areas, 89–90
 San Isidro, 14–15
 refuse distribution study, 128–32
 Schualaca, 15
 refuse distribution study, 132–36
 Shipibo-Conibo pottery, 68
 social influences, 11, 26–30
 socioeconomics, 1–2
 spatial flexibility, 106–107
 spatial organization, 103, 104, 158–59
 and firing, 107–113
 and middle-range theory, 3–4, 5–7
 and production, 101–102, 105–109
 spatially flexible activities, 100–101, 161
 spatially restrictive activities, 101, 161
 specialist potters, 94–95
 specialization, 95–98
 archaeological identification of, 152–53
 standardization, 90–91, 95–96
 and competition, 96–98
 and experimentation, 96–98
 stockpiling, 67–68
 streamlining of ceramic assemblages, 71
tecualones, 44–45, 46, 70, 117
 use life, 73–77
 vessel frequency, 62–63
 temper:clay ratios, 38–39
 temperatures *and see* climate, 16–18
 temperatures (firing), 52–53, 55
 tempers, 23–25
 acquisition, 32–33
 consumption rates, 38
 processing, 36–39
 and vessel use life, 78
 time, and ceramic production, 42, 95, 103–104
 toft zones, 121
 tools, 39–40, 88
 and spatially flexible activities, 100–101
 and spatially restrictive activities, 101
tostadores, 44
 production of, 42–43
 use life, 73–77, 78–79
 vessel frequency, 62, 65
