Index

- abundances of elements and isotopes: cosmic, 13; Earth, 13, 15, 19; meteorites, 17, 20, 148, 173; Solar System, 19, 96
- accretion, heterogeneous/inhomogeneous, 138, 153
- accretion disk, 19, 116–17, 140, 155, 187, 246
- actualism, 160–1; *see also* naturalism
- Acuña, Mario, 168–9
- Adams, John Couch, 191; career, 191
- Aerospace Corporation, 241
- Africano, John, 127
- Ahrens, Thomas J., 246–7
- Airy, G. B., 191, 192
- Alexander, Tom, 205
- Alfvén, Hannes: career, 12; extrasolar planetary systems, 174; formation of planets, 12, 15, 17, 139, 162–3, 171; on Gerstenkorn, 202, 222; on Hoyle's theory, 111; jet streams, 170; Kaula and others on, 171–2; naturalistic method, 99; partial corotation ($\frac{1}{2}$ effect), 163–4; on planetesimal accretion, 12; plasma theory, 100, 160–8; satellite prediction, 164; Saturn's rings, 164
- alkali metals, 149, 153
- Allende meteorite, 17, 92, 119–20, 122–4, 126, 128; Ca–Al-rich inclusions, 128, 152, 156
- Alphonsus (region of Moon), 205
- Alter, Dinsmore, 202
- aluminum: ^{26}Al isotope, 18, 107, 119–20, 122, 124, 126–8, 173
- aluminum oxide, 151
- ammonia in giant planets, 139, 142
- Anders, Edward, 120–1, 123, 127, 148, 156, 212; analysis of lunar samples, 228, 230–1, 237–40, 256; career, 150; hot-origin hypothesis, 150–1; selenogony, 183, 236
- Anderson, D. H., 228
- Anderson, Don L., 152, 158, 236
- Anderson, E. E., 228
- angular momentum: Earth–Moon system, 179, 202, 244, 248; Jupiter, 7, 42, 96; objection to Nebular Hypothesis, 39, 41, 49, 81; objection to tidal/encounter theories, 75, 80; in selenogony, 174, 184, 186, 244, 246, 258; in Solar System, 7–10, 41, 53, 96, 115, 162, 173; Sun, 7, 12, 96, 107; transfer in accretion disk, 116
- antimony, 231
- Apollo 11* (mission to Moon), 92, 119, 183, 209, 223–30, 232
- Apollo 12*, 225, 229, 231, 237
- Apollo 15*, 237
- Apollo 16*, 241, 256
- Apollo 17*, 256
- argon isotopes, 157
- Armagh Observatory (Ireland), 172
- Arnett, W. D., 126
- Arnold, J. R., 156
- Arrhenius, Gustav, 17, 47, 165–7, 170; career, 171
- Arrhenius, Svante, 47, 66; career, 47
- Asoussa, George, 123, 125
- asteroids, 59, 96, 164, 170
- Astrophysical Journal*, 62
- Atomic Energy Commission, 103
- Audouze, J., 126
- Australian National University, 103, 147, 223, 229
- Babinet's criterion, 49
- Baker, Howard, 186, 241
- Baker, James G., 186, 241–2; career, 186, 241
- Ball, Sir Robert, 24, 195
- Banerjee, S. K., 181, 248
- basalt, 228, 231–2, 237–40
- Baxter, B. E., 241
- B²FH (Burbidge, Burbidge, Fowler, & Hoyle), 105–6, 150
- Beachey, Ann, 252
- Becker, George F., 53–4
- Becker–Döring condensation theory, 11
- Bell, P. R., 228
- Bernas, R., 110
- beryllium, 15, 106–7
- Bickerton, A. W., 23–4; career, 23
- Bieman, Klaus, 229
- Big Bang cosmology, 98, 260
- Binder, Alan, 205, 233, 248
- Birkeland, Kristian, 49
- bismuth, 151, 228, 231
- Black, Donald C., 121
- Bodenheimer, Peter, 142
- Bode's Law, *see* Titius–Bode Law
- Bogard, D. D., 229
- Bok, Bart, 12
- Boltzmann, Ludwig, 131

Science Citation Index, 102, 104, 124, 135, 141
 Scott, R. F., 229
 Scripps Institute of Oceanography, 171
 Secco, L., 110–11
 Sedgwick, W. F., 75
 See, T. J. J., 48–9, 62–3, 198; capture theory,
 49, 197–8; career, 48–9; selenogony, 179,
 197
 selenogony, 91, 93, 115, 174, 177–260; *see also*
 Moon, origin
- Shervais, J. W., 248
 Shoemaker, E. M., 229
 Showalter, M. R., 274
 siderophile elements, 183, 209–10, 214–15,
 228–32, 236–40, 249, 259
 silicates: collisions, 246–7; in meteorites, 145–6;
 in terrestrial planets, 135, 146, 149, 153; *see*
also iron, separation from silicates
- silicon: dioxide, 109, 149; in Sun, 10
 silver, 228, 231; isotopic anomaly of ¹⁰⁷Ag, 124
 Simanton, J. R., 119
 Simoneit, B. R., 229

INDEX

- uranium, 121, 259
 Uranus: composition, 142; formation, 138; orbit, 191; rings, 163, 165–8; rotation, 23, 59, 96; satellites, 163
 Urey, Harold C.: on ^{26}Al , 120; and *Apollo* program, 180, 199; career, 15, 203; formation of planets, 15–16, 113, 131, 145–6, 150; on Gilbert, 196; influence on planetary science, 122, 144, 151, 200, 215, 223; on meteorites, 152; on O’Keefe, 207; origin of life, 16; and *Ranger* lunar missions, 205; selenogony, 16, 98, 179–80, 182, 198–206, 209–17, 222–3, 237–8, 260; on silicate-core hypothesis, 219; on subjectivity of scientists, 200, 216; supernova trigger, 107; synthesis of light elements, 109; on Wise, 206
- Van Arsdale, W. E., 248
 Van Maanen, A., 67
 vanadium, 212, 239; oxide, 151
 Vangioni-Flam, E., 126
 Vanyo, J. P., 248
 Velikovskiy, I., 167, 186
Venera spacecraft, 157
 Venus: argon isotopes, 157; composition, 153, 158; lost satellite, 255; orbit, 23, 59; rotation, 59, 246, 256
 Vesta (asteroid), 237
 viscosity: of gases, 14; turbulent, 19, 115
 Vogel, H. C., 23
 volatile substances: in Moon, 183–4, 208, 211, 215, 227, 231–2, 236, 259; in terrestrial planets, 110, 148
Voyager spacecraft, 142, 164–5, 168–9, 184
 Vsekhsvyatskii, V. S., 168
- Waal, J. D. van der, 158
 Wänke, Heinrich, 211–12, 237, 239–40, 248
 Walcott, Charles D., 50–1
 Walls, F. C., 229
 Ward, William R., 20, 135–6, 187, 244–6, 255–6, 260; career, 20
 Wark, D. A., 125
 Warner, J., 229
 Warren, Paul H., 238, 240, 248, 253, 256
 Washington State University, 229
 Wasserburg, G. J., 18, 120, 122, 124; career, 122
- Wasson, John, 155–6, 238, 248, 256, 259; career, 155
 water: in Earth’s atmosphere, 148–9; in giant planets, 139; on Moon, 98, 182–3, 204, 208, 228; in preplanetary nebula, 108–9
 Weaver, Thomas A., 126
 Wefel, J. P., 126
 Wegener, Alfred, 37, 87
 Weidenschilling, S. J., 136, 172, 248, 256–7
 Weizsäcker, C. F. von, 14–15, 200; career, 14
 Wetherill, George W., 16, 21, 101, 136–8, 141, 187, 246, 248, 260; career, 136
 Wheeler, J. A., 198
 Whipple, Fred, 11–12, 158–9; career, 12; on Hoyle’s theory, 111
 Whitney, A. W., 29
 Wilcox, R. E., 229
 Wilhelms, Don E., 216
 Williams, I. P., 17
 Wilmarth, V. R., 229
 Winchell, Alexander, 4
 Wise, D. U., 115, 181–2, 205–6, 232; career, 182
 Witting, J. M., 97, 132, 171
 Wolf, Rainer, 231–2
 Wood, John, 152, 156, 242, 248, 256, 258; career, 156
 Woodward, Robert S., 52, 57; career, 57
 Woolfson, M. M., 15, 16, 17; career, 16; on Hoyle’s theory, 111; selenogony, 241
 Woosley, S. E., 122, 126
 Worden, Simon P., 127
- xenon, 238; isotopic anomaly, 17, 105, 113, 115, 121, 123
- Yale University, 103, 152, 173
 Yerkes Observatory, 15, 62, 103
 Yeshiva University, 18
 Yoder, C. F., 222, 248
 Young, Anne Sewall, 41
 Young, Charles Augustus, 62; career, 61–2
 yttrium, 229
- Zähringer, J., 229
 zinc, 231
 zirconium, 183, 227, 229; oxide, 151
