ISBN 0 521 55227 3 hardback

CONTENTS

<i>List of figures</i>	page ix
<i>Preface</i>	xxv
<i>Acknowledgements</i>	xxviii
1 Background to the inquiry	1
1.1 Introduction	1
1.2 European origins	7
2 Background to the archaeology	18
2.1 Archaeological context	18
2.2 Geographical and chronological framework	27
3 Theoretical context	36
3.1 Contextualising archaeological theory	36
3.2 Systems of social evolution	44
3.3 Societies as organised networks	54
4 Regional systems: the social and cultural landscape in Europe in the Late Bronze Age, 1100–750 BC	63
4.1 The social and cultural landscape	63
4.2 Demographic and economic trends	98
5 Regional divergence: the Mediterranean and Europe in the 9th–8th centuries BC	124
5.1 Economic take-off in the Mediterranean: the Phoenician and Greek expansion	124
5.2 Interaction along the Atlantic façade	144
5.3 From Villanova to Fuen: the Phahlbau connection	161
5.4 The nomadic connection: the Thraco-Cimmerians	185
6 The new economic axis: Central Europe and the Mediterranean 750–450 BC	210
6.1 Interlude and change: the beginning of the Hallstatt Culture	210
6.2 The royal dynasties	249
6.3 Transformation and decline	290

7 Transformation and expansion: the Celtic movement, 450–150 BC	314
7.1 The archaeological context of population movements	314
7.2 The social and historical context of Celtic population movements	320
8 The emergence of the European world system in the Bronze Age and Early Iron Age: Europe in the 1st and 2nd millennia BC	359
8.1 The 2nd millennium: an interpretative and explanatory sketch	359
8.2 Some social and cultural regularities	394
8.3 Some evolutionary regularities	407
8.4 Concluding perspective – epilogue	418
<i>Notes</i>	420
<i>Bibliography</i>	434
<i>Index</i>	492

FIGURES

1	The world according to Herodotus, c. 440 BC (Herodotus, trans. Green 1987, 294–5)	8
2	An Assyrian bull statue from Nineveh on its way through the Dorian colonnade at the British Museum in 1850. From the <i>Illustrated London News</i> , reproduced after Larsen (1988, 19)	9
3	Early Iron Age warrior representing the early 20th-century myth of heroic European barbarism (after Brun 1987, 6)	11
4	Gordon Childe (1892–1957)	15
5	Colin Renfrew (1937–) (from a private photo)	15
6	The Swedish archaeologist Oscar Montelius (1843–1921) (reproduced after Gräslund 1987, fig. 28)	19
7	The German philologist and historian Gustav Kossinna (1858–1931) (reproduced after Jensen 1988, 39)	19
8	C. J. Thomsen (1788–1865) (reproduced after Gräslund 1987, fig. 14)	25
9	Different modes of change in economy (economic practice) and material culture (symbolic and ideological order)	27
10	Vegetational map of Europe, defining the basic environmental zones	29
11	Copper and tin deposits in Europe	30
12	(a) Climatic fluctuations based upon glacial advances and retreats, reflecting respectively cold and warm periods. (b) More detailed climatic fluctuations for the period 2500 BC–0, based on variations in C14, reflecting cooler and warmer periods (redrawn after Billamboz 1977)	31
13	The major chronological systems for the Bronze and Early Iron Ages in Europe	32
14	The theoretical cycle oscillating between evolutionary and diffusionist, generalising and particularising interpretations of the past and the present	37
15	Civilisational cycles of hegemony and cultural identity (after Friedman 1989: Fig. 16.4)	39
16	Relationship between meaning and function in the archaeological record (after Shanks and Tilley 1987a, fig. 6.1)	43
17	A temporal model of evolutionary trajectories	49

18	A spatial model of centre–periphery relationships among evolutionary types	51
19	Strategies for establishing and maintaining order and control vertically	55
20	Strategies for extending social relations and control horizontally	57
21	Types of relationships between strategies of vertical and horizontal control defining dominant strategies and structures	57
22	Basic settlement components, which in various combinations define different types of hierarchy and contradiction	57
23	Types of relationships between dominant subsistence strategies and the subsequent organisation and ritualisation of the landscape	59
24	Summary diagram of strategies and dynamics constituting Bronze and Iron Age social organisation	59
25	Two ideal types – tribal and state forms – of overlapping power networks	60
26	Late Bronze Age regional traditions in Europe	64
27	Common decorative motif and its application on pottery in Central Europe and on bronze ornaments in the Nordic region during HaB1: (A) from Nordic hanging vessels (after Beltz and Wagner, <i>Vorgeschichte Mecklenburgs</i> , Berlin 1899, Abb. 83; Sprockhoff 1937, Tafel 23); (B) from Moravia (after Podborsky 1970, fig. 12)	65
28	Terminology employed to characterise different geographical levels of cultural identity in material culture in Bronze Age Europe (reworked from Brun 1991, 13)	67
29	The basic Nordic chiefly symbols during the Bronze Age, as represented in (A) prestige goods depositions of single pieces (one-type hoards); (B) prestige goods depositions of several pieces/sets (multi-type hoards/personal sets); and (C) burial depositions (modified after Bodilsen 1987, fig. 6)	69
30	Geographical distribution of the Nordic Bronze Age tradition during the Late Bronze Age, defined by the use of barrows, cairns, ritual centres of rock carvings, and Nordic and Arctic bronzework (redrawn after Kristiansen 1987a, fig. 30)	71
31	Cultural interaction in the Alpine Urnfield tradition as reflected in the similarity of pins (after Kimmig 1949/50, Abb. 7,8)	72
32	(A) Ritual variations through time: patterns of investment in wealth deposition and monument construction during the Nordic Bronze Age (after Kristiansen 1991, fig. 2.3); (B) Ritual variations through time: chronological fluctuations in the amount of metal deposition by weight scores in hoards, isolated finds and burial finds in the Lausitz Culture during Montelius I–V (after Stepniak 1986, fig. xxiv)	

33	Ritual variation in space: distribution of Balkan or Macedonian pendants in burials and sanctuaries (after Pingel 1980, Abb. 2)	77
34	Axe and sword frequency in Southern Sweden over the six Bronze Age periods (based on Larsson 1986, figs. 41 and 42)	77
35	The circulation of metal and some methods of deposition or discard of metal objects in the Bronze Age (after Coles 1982, fig. 2)	80
36	Scrap hoard for recycling from Eiby, Zealand. (Photo National Museum Copenhagen)	81
37	Set of personal valuables, and trading goods, from the central site of Stramberk-Koptouc in Moravia (after Podborsky 1970)	82
38	Distribution hoard of identical Central European winged axes from Ørbækklunde, Fuen, Denmark (after Broholm 1946, M63)	83
39	Personals hoards consisting of two sets of female ornaments, from (A) Rannered, Northern Jutland, and (B) Kirkendrup, Fuen, Denmark (photo National Museum Copenhagen)	84
40	Boundary formation and interaction in Northern Germany between the Nordic Culture and the Lausitz Culture (redrawn after Eggers 1959, Abb. 30)	86
41	Two phases of later Urnfield expansion into France from the western Rhine-Swiss group (based on Brun 1988a, figs. 3, 4 and 6)	87
42	Distribution of Ha B1 hammered bronze vessels, showing areas of production and consumption (after Thrane 1975, fig. 89)	89
43	Distribution of hammered bronze vessels (after Thrane 1975, fig. 81)	90
44	Model of the regional and local distribution of metalwork from Central Europe (Hungary) to Denmark	91
45	Local chiefly networks of personally exchanged objects in burials between Lausitz and Zealand, represented by local variants of Phatten knives (based on Thrane 1975, figs. 49 and 46)	92
46	Model of the regional division of metal production and distribution in Europe during Ha B1	95
47	Rock-carvings and statuettes showing ritual performances by the chiefly elite of common Bronze Age myths (after Kristiansen 1984a, fig. 11)	97
48	Frequency of cemeteries in the Lausitz Culture during Montelius I–V (after Stepniak 1986, fig. xxiii)	99
49	Frequencies of settlements from the Knoviz group during Br. D (TD), Ha A1–2 (MPE), Ha B1 (MPL) and Ha B2–3 (LP) for the whole settlement area, and for three local areas (after Bouzek <i>et al.</i> 1966, 106)	100
50	Settlement development in a local area of the Lausitz culture in Silesia in relation to topography during the Late Bronze Age,	

	Montelius III–V, showing expansion and increasing settlement density (redrawn after Gediga 1967, appendix of folded maps)	101
51	The development of settlement location, as represented by cemeteries, in relation to soil quality, in Silesia from Montelius III to V, demonstrating the increased use of poorer soils (analysis based on soils maps and settlement maps in Gediga 1967)	104
52	Plans of the Urnfield settlements Wasserburg, Buchau in Baden-Württemberg (after Audouze and Büchsenschütz 1992: 115 and 110)	105
53	Local cultural groups in lowland Northern Europe during Montelius V, as represented by axes (after Struwe 1979, Taf. 53)	107
54	Animal bone frequencies at South Scandinavian settlements from Late Bronze Age IV to Late Bronze Age V/VI, showing the increase of pig and sheep over time (after Hedeager and Kristiansen 1988, 86; based on Nyegaard 1983)	108
55	Animal bone frequencies at North German/Nordic settlements and Lausitz/Central European Late Bronze Age/Early Iron Age settlements (data based on Ambros 1986, Abb. 2)	109
56	Changes in the relationship between cattle, sheep/goat and pig from Middle to Late Bronze Age and Early Iron Age at two Alpine settlements – Mottata-Ramosch and Montlingerberg (data from Ostorja-Zagorski 1974, fig. 6)	110
57	Reconstruction of defence works from the Lausitz Culture, illustrating their variety and complexity (after Buch 1986, Abb. 7)	112
58	Comparative diagrams of age structure at Late Bronze Age cemeteries (data after (A) Furmanek and Stloukal 1986, Tab. 3; (B) Bukowski 1991, Abb. 41; (C) Olausson 1987, fig. 19); (D) The age structure of a living Hallstatt population based on evidence from Polish cemeteries (after Ostorja-Zagorski 1984, fig. 6)	114–115
59	(A) Chiefly Urnfield warriors of the Danube, reconstructed on the basis of burials and hoards (after Schauer 1975); (B) Chiefly Urnfield warriors of the Northwestern Alps, reconstructed on the basis of burials and hoards (after Schauer 1975); (C) Chiefly Urnfield warriors of Northern Italy, reconstructed on the basis of burials and hoards (after Schauer 1975); (D) Chiefly Urnfield warriors of Western Europe, reconstructed on the basis of burials and hoards (after Schauer 1975)	116–119
60	Community areas (25–40 km) of the Late Lausitz Culture (after Buch 1989, fig. 76)	121
61	Model of the Late Urnfield settlement system	121
62	Depictions of Bronze Age warriors with shield and spears, the military backbone of chiefly retinues throughout the 1st and 2nd	

	millennia BC (partly redrawn, based on selections from: Malmer 1981, fig. 5; Carpenter 1991, figs. 46 and 296)	123
63	Phoenician trade routes in the Mediterranean and map of 'Phoenician' objects/trade monopoly in the late 8th and early 7th centuries BC (based on Shefton 1982, Abb. 1; Picard 1982, Abb. 1)	127
64	Distribution of Cypriot and related fibulae in the Mediterranean and in Atlantic Europe (after Coffyn 1985, carte 24)	129
65	Ox and sheep figurines as a percentage of all animal figurine dedications at Olympia, showing a gradual decline from the 10th to the 8th century (after Snodgrass 1987, fig. 64)	129
66	Number of settlements compared to number of burials on the Argive plain in Greece (based on Morris 1987, fig. 54; Snodgrass 1980, fig. 4)	131
67	Number of strong archaeologically known tomb cults compared to number of burials (based on Morris 1988, fig. 2; Snodgrass 1980, fig. 3)	132
68	The foundation of Greek colonies in the Mediterranean (based on Cunliffe 1988, Abb. 15)	134
69	Foreign dedications at Olympia during the 8th–7th centuries BC (after Kilian-Dirlmeier 1985, Abb. 15)	135
70	The evolution of settlement in Etruria and Latium, showing an increasing trend towards centrality, followed by urbanisation (after Auidi 1985, figs. 11.1, 11.3, 11.5, 11.9)	138–139
71	The development of armour from the 9th to the 6th century BC in Italy (after Stary 1981, Beilage 1–2)	142–143
72	Schematic outline of the Atlantic tradition and its regional/local groups (after Brun 1991, fig. 4)	146
73	The distribution of flesh hooks/spits for feasting according to type (after Coffyn, Gomez and Mohen 1981, carte 28)	147
74	The distribution of carps-tongue swords (after Coffyn 1985, carte 18)	148
75	The distribution of Irish cauldrons, Breton sickles and double looped axes (after Coffyn, Gomez and Mohen 1981, carte 25)	149
76	Quantification of use wear and repairs on Late Bronze Age metalwork from Southwest Britain, East Anglia and the Thames Valley (after Taylor unpublished ms 1982, see also Taylor 1993)	151
77	The European relations of the Venat hoard (after Coffyn 1985)	152
78	Model of the social organisation and the corresponding settlement structure of the Late Bronze Age of Southwest England (after Pearce 1983, fig. 6.21)	156
79	Reconstruction drawing of palisaded farmstead from Staple Howe, Yorkshire. Although from the Early Iron Age, it	

- represents the tradition of the Late Bronze Age farmsteads (after Audouze and Büchschütz 1992, fig. 100) 157
- 80 (A) Distribution of grave stelae and mineral resources, forming a centre-periphery relation between coast and inland areas (based on Schauer 1983, abb. 10); (B) Stelae and old road systems, suggesting an ancient communication system between coast and inland areas, and between inland settlements (after Ruiz-Galvez and Galan Domingo 1991, fig. 3). Triangles represent Late Bronze Age/Early Iron Age stelae near tombs (Extremadura type); crosses represent engraved slabs covering Late Bronze Age cists (Alentejo type); dashed lines represent old roads. 158
- 81 Examples of grave stelae from the Late Bronze Age of southwestern Iberia (after Gamito 1988, 245) 159
- 82 Distribution of horse gear and Antenna swords from Ha B3 in Europe (based on Thrane 1975, figs. 74 and 119) 163
- 83 Chiefly centres from northern Italy to northern Europe, as indicated by the deposition of the Antenna sword and the Moringen sword (based on Müller-Karpe 1961, fig. 76) 164
- 84 Distribution of Phahlbau spearheads and West Baltic spearheads in relation to Cimmerian bridles and the full distribution of the late Lausitz Culture (based on Thrane (1975, fig. 30), Kossack (1954a, Karte 5) and Bukuwski (1974: abb. 1)) 165
- 85 Geometric motif (meander) on a bone tool (belt?) from an urn grave in northern Jutland, Denmark, late period IV (Ha B1/B2) (after Broholm 1946, no. 671) 167
- 86 Villanovan pottery helmets (replicas), used as urn lids and Nordic belt buckles of bronze (after Hencken 1968, fig. 268; Broholm 1946, 186 and 208) 168
- 87 Italian bronze shields and Nordic belt boxes (after Strøm 1971, 10 and fig. 1; Broholm 1946, 214; Beltz and Wagner 1899, 57) 169
- 88 Amphorae from Vejo in Italy and Gevlinghausen in northern Germany (after Jockenhövel 1974, Abb. 2 and 4) 170
- 89 The common Urnfield sunship bird motif from a selection of hammered works: (1) Unterglauheim, Kr. Dillingen, (2) Gevlinghausen, Kr. Meschede, (3) Vejo, Quattro Fontanili (after Jockenhövel 1974, abb. 7) 171
- 90 Chiefly centres along the Elbe, defined by richly ornamented Nordic razors (after Sprockhoff 1956, abb. 21b) 173
- 91 Map of the Seddin area with centres of chiefly burials circled and local political boundaries marked (after Wüstemann 1974, abb. 9) 173
- 92 Construction of the Lusehøj barrow in sections, using fences to stabilise the sod (after Thrane 1993, p. 163) 175

93	The Lusehøj burial reconstructed (after Thrane 1984, fig. 82)	177
94	Cult wagon from Strettweg, Austria, found in a princely Hallstatt burial in 1851 (after <i>Tresor des Princes Celtes</i> , Paris 1987, Taf. VII)	179
95	Model of the local settlement hierarchy within the Lusehøj/Voldtofte chiefly territory on Southwestern Fuen (based on Thrane 1980, fig. 8)	181
96	Two reconstructions of the possible employment of phalerae in horse harness based on the hoard from Ückeritze, Northern Germany (after Lampe 1982, Abb. 13)	182
97	Distribution of golden 'eidrings' and lurs in northern Europe, defining chiefly centres (based on Struwe 1979, Tafel 64)	183
98	Relationship between rainfall/climate, resource strategy and social complexity in nomadic societies from later history (after Gibson 1988, fig. 9)	188
99	(A) Comparative chart of bronze types from the Northern Caucasus, the Balkans and Macedonia (after Bouzek 1974, fig. 21); (B) Macedonian and Thracian Bronzes and their parallels (after Bouzek 1974, fig. 20)	196–197
100	Rolling animals from Siberia, northern Caucasus and the Crimea (after Kossack 1987, Abb. 2)	199
101	Scytho-Iranian animal style from Kazakhstan, Northwestern Iran and the Kuban area (after Kossack 1987, abb. 22)	200
102	The Cimmerian frontier of change (based on Kossack 1954a, Karte 5)	202
103	The archaeology of Cimmerian and related cultural groups (after Bouzek 1983, fig. 24)	202
104	(A) Thraco-Cimmerian horse gear; (B) Hallstatt horsegear in local imitation of 'Thraco-Cimmerian' types (after Kromer 1986, abb. 33–4)	204
105	The spread of iron in Europe (after Pleiner 1980, fig. 11.2)	212
106	Distribution of iron objects from the Late Bronze Age and the Early Iron Age in Northern Central Europe (after Horst 1989, fig. 68)	213
107	The geographical and temporal spread of the components in iron use and production (redrawn from Levinsen 1989, fig. 5)	214
108	Iron bars in Central Europe and main iron mining and smelting centres of the Early Iron Age (after Pleiner 1980, fig. 11.7)	215
109	Relationship between the use of iron, bronze, silver/gold and bone/stone in the Billendorf Culture in the production of tools, weapons and ornaments (redrawn after Buch 1989, fig. 91)	215
110	Model of the spatial and temporal development of metal production, suggesting a cycle of centralised/decentralised production	217
111	The initial phase of centre-periphery formation during the early	

	Hallstatt period, a warrior zone being formed around the Adriatic cultural <i>koine</i> of early city states, reflected by the distribution of the Hallstatt iron sword (the western Hallstatt) and fortified chiefly centres in the eastern Hallstatt (based on Kimmig 1983, Abb. 43)	218
112	(A) Identical design motifs (swastikas) on Villanovan pottery from Tarquinia, and belts from the royal tumuli at Gordion, Asia Minor (after Hencken 1968, fig. 19; Young 1981, fig. 11); (B) Leather and open-work bronzes with identical design structures on belts from the royal tumuli at Gordion, Asia Minor, and from early Hallstatt C burials in Bavaria (after Kossack 1954a, Abb. 21, 22, 25; Young 1981, fig. 95)	221
113	Two belts from the royal tumuli at Gordion (after Young 1981, fig. 11)	222
114	Territorial settlement structure in Eastern Hallstatt (Kalenderberg group) based on the regular spacing of fortified hilltop settlements, surrounded by ordinary settlements and flat graves (after Kaus 1981)	223
115	Greek imports and lines of influence in the Balkans during the Early Iron Age (adjusted after Kromer 1986, Abb. 9)	224
116	'Princely' burial at Stična from Hallstatt C, showing a mixture of Late Bronze Age and Early Iron Age traditions, and Greek/East Mediterranean and Cimmerian influence (after Gabrovec 1966, Abb. 4-7)	225
117	Transformations of orientalisising influences: (A) Tripod-cauldron of bronze with protruding heads; and (B) pottery imitations from the Eastern Hallstatt, Kalenderberg group (after Kromer 1986, Abb. 71 and 86)	227
118	The acculturation of Adriatic/Mediterranean motifs and their 'barbarisation' from Este to Sopron in Hungary (after Kromer 1986, Abb. 80)	229
119	Reconstruction of a miner carrying chunks of salt at Hallstatt (after Kromer 1986, Abb. 80)	229
120	Graph showing the age of death (and life expectancy) of adults in the Iron Age graves of the mining community at Dürrenberg, above Hallein (after Pauli 1984c, fig. 59)	230
121	(A) Plan of the site of Stična in Slovenia, showing the course of the walls around the hilltop settlement and the burial mounds still visible (after Wells 1984, 21 and 23); (B) Schematic map showing density of surface iron ore deposits and evidence for prehistoric iron production in Slovenia (after Wells 1984)	232
122	Section of a map from 1539 showing the amber-rich coastal area of Samland in former Eastern Prussia (after Jensen 1982, 15)	234
123	Drinking service and bird protomes from the late Lausitz Culture	

	and drinking scene from a situla in Austria (after Buch 1989, Abb. 4)	236
124	House urn and face urn from Pommerania (selected from Jazdzewski 1984, Abb. 151)	236
125	The distribution of harp fibulae and pots with bronze nails, showing the exchange network connecting Italy, Eastern Hallstatt and Pommerania (based on Kossack 1954b, Tafel 22)	238
126	Chiefly burial from Mindelheim, Bavaria, Hallstatt C (after Kossack 1959, Taf. 22)	241
127	(A) Wheels with board felloes and iron attachments (after Kossack 1971, fig. 31); (B) Assyrian war-chariot, Til Barsib (Tell Asmar), second half of eighth century BC (after Kossack 1971, fig. 35.3)	242–243
128	Two models of prestige goods exchange, one based on exchange between peers (peer-policy interaction, with indirect centre-periphery relations) and one based on direct exchange between centre and periphery	251
129	Wagon graves of the Hallstatt and Early La Tène period, and central settlements ('Royal residences' or <i>Herrensitze</i>) of the Late Hallstatt period (based on Kimmig 1983, Abb. 59 and 76)	255
130	Grave inventories from a selection of princely burials of the Late Hallstatt period (based on Biel 1985, abb. 93–7)	256
131	Chronological table of the Hallstatt royal residences and burials (based on Spindler 1983, 83)	257
132	Reconstructed view of the burial chamber of the Hochdorf prince (after Biel 1985, Abb. 52)	258
133	Ground plan and aerial view of The Heuneburg in its classical 'Greek' phase (after Kimmig 1983, Abb. 34)	259
134	Hallstatt period (chiefly) farmsteads in the Landshut region, Bavaria (after Audouze and Büchsenschütz 1992, fig. 124)	260
135	Ground plan and reconstructed view of the early Heuneburg (period IVc) fortification with palisaded 'farmsteads' (after Kimmig 1983, Abb. 33)	261
136	Ground plan and reconstructed view of the southeastern corner of The Heuneburg in its classical, 'semi-urbanised' phase with the mudbrick fortification (after Kimmig 1983, Abb. 45)	262
137	Model of the spatial-political structure of the Heuneburg domain in Ha D1, according to burial wealth and its crumbling in Ha D2–3 (after Frankenstein and Rowlands 1978, figs. 1 and 3)	265
138	Model of the spatial-political structure of the Hohenasperg domain in Ha D2–3, according to burial wealth (after Frankenstein and Rowlands 1978, fig. 4)	266
139	Model of the political territories of the Ha D royal residences (<i>Herrensitze</i> or <i>Fürstensitze</i>), based on weighted Thiessen polygons (after Härke 1979, fig. 55)	267

140	The local structure of a royal residence and its princely burials and large tumuli at Asperg in Baden-Württemberg and at Michelberg in lower Austria (after Kromer 1986, Abb. 60–1)	268
141	The development of trade and communication networks in four stages from Early Hallstatt to Early La Tène in the Western Alps (HaD1, HaD2, HaD3 and LtA) (after Pauli 1994, figs. 7.1, 7.2, 7.3, 7.4)	270–271
142	Late Hallstatt gold finds and pyramid-formed iron bars of Late Hallstatt/Early La Tène (based on Kimmig 1983, Abb. 54, Bukowski 1986a, Abb. 3)	272
143	Bronze bucket (<i>situla</i>) from Vace (Slovenia) of the 6th century BC, showing the most important scenes of the ‘great festival’, with processions of vehicles and horsemen, contests, and wining and dining accompanied by music (after Pauli 1984c, fig. 95)	275
144	Large bronze krater from Trebeniste (after Palavestra 1994, fig. 5.10)	275
145	Greek helmets in princely warrior graves from the 6th–4th centuries BC in the Balkans and eastern Europe/Thrace, often accompanied by other parts of Greek hoplite armour. The map indicates evolving centre–periphery relations between the Greek Mediterranean world and new warrior elites, employing Greek weapons as prestige goods (after Frey 1991, Abb. 1)	276
146	Map of ancient Scythia (based on Rolle 1989, fig. 1, with Greek imports added from Rolle 1985, Abb. 3)	280
147	Ancient Scythia in the 4th–3rd centuries BC, with sources of iron and iron production added (after Rolle 1979, Abb. 7)	281
148	Reconstructed view of Scythian royal burial at Ordzonikidze (after Rolle 1989, fig. 6)	283
149	High-ranking Scythians in full armour, based on archaeological finds (after Rolle 1989, fig. 42)	284
150	Distribution of Scythian finds and princely sites of the Hallstatt culture in Central Europe (after Kromer 1986, Abb. 46 and 48)	285
151	Early expansion of the Scythians in Central Europe in the 6th century BC (based on Chochorowski 1985, Taf. 5)	286
152	Distribution of Scythian ornaments and weapons, with a suggested boundary between permanent settlement areas and a northern frontier of military expeditions, mainly with male equipment (drawn together after Bukowski 1974, Abb. 1 and 8)	287
153	Map of Europe showing the distribution of Mediterranean civilisation and its primary periphery of royal barbarian burials and residences	289
154	Model of the structure of centre–periphery relations in Europe during the later Hallstatt period (developed from Cunliffe 1988, fig. 76)	291

155	Transalpine contacts in the 6th century BC between Mediterranean city states, Ha D residences and their warrior periphery (after Nash 1985, fig. 3.1)	293
156	Political-economic developments in Western Central Europe, 550–400 BC (after Cunliffe 1988, fig. 15)	294
157	Ground plan and reconstruction of the fortified village settlement at Biskupin in Poland from the late Hallstatt period (after Brun 1987, 154–155)	296
158	Section of the dense settlement system of the Billendorf Culture, with proposed subsistence areas for farming and forestry (after Buch 1986b, Abb. 19)	297
159	Summary diagram showing changes in social-economic and ecological conditions during the rise and decline of the late Lausitz culture in the Billendorf group (after Buch 1986b, Abb. 20)	297
160	Animal bones at Lausitz settlements of Biskupin type showing the relative proportions of cattle, pig and sheep/goat (after Ostorja-Zagorski 1983, Abb. 6)	299
161	Late Hallstatt settlement system of regularly spaced hillforts in Danebury area of Wessex (after Cunliffe 1976, fig. 1)	301
162	The development of Danebury from a simple to a complex hillfort (after Cunliffe 1983, fig. 20)	302
163	The local context of a hillfort: Danebury and its surrounding landscape of regularly spaced settlements (after Cunliffe 1983, fig. 65)	303
164	Pottery styles in southern Britain, suggesting a development from smaller to larger cultural and political entities (after Cunliffe 1974, figs. 3.4 and 7.2)	304
165	Alternative models of the social structure at Danebury (after Cunliffe 1983, fig. 152)	305
166	Model of the relationship between population density/settlement density, ecological change and surplus production from the Late Neolithic to the transition to the Iron Age in southern Scandinavia (after Kristiansen 1980, abb. 12)	307
167	Ground plan of Pre-Roman village at Grøntoft, western Jutland, and urnfield cemetery with simple grave goods (after Hedeager 1987, <i>Danmarkshistorien</i> 2, 13 and Jensen 1987, <i>Danmarkshistorien</i> 1, 363)	308
168	Ground plan and reconstruction of Bronze Age clan house, (300 m ²) and Early Iron Age family farm (100 m ²), reflecting the fundamental social and economic changes taking place in the North European lowlands and Southern Scandinavia between the Bronze and Iron Ages (after Hedeager 1987, <i>Danmarkshistorien</i> 2, 10)	309

169	Three settlement trajectories from Late Bronze Age to Early Iron Age in northern Europe	311
170	The distribution of Etruscan beaked bronze flagons (<i>Schnabelkannen</i>) in Western Europe, showing a concentration in the three main areas of Early La Tène chiefly wagon burials (based on Kimmig 1983, Abb. 32)	323
171	Reconstruction of a Celtic war chariot drawn by a pair of horses (after Müller-Karpe 1989, Abb. 12)	324
172	Two characteristic motifs of Early La Tène A art ('Premier style') – palmettes and arcs, with a western and eastern distribution in the chiefly centres of Early La Tène warrior burials (based on Schwappach 1976, figs. 4 and 5)	326
173	Early La Tène fibulae of Münzingen-Andelfingen type, inlaid with coral, in Central Europe, indicating intensive interaction (after Champion 1985, figs. 8.3 and 8.4)	326
174	(A) The consumption of meat at oppida in the Nîmes region of Languedoc, during the period 800 BC to 1 BC, calibrated against the quantity of household pottery (after Py 1989, fig. 3); (B) The changing frequency of amphorae for wine, doles (grain containers) and wheel-turned pottery from 600–1 BC at oppida in the Nîmes region of Languedoc (after Py 1989, fig. 4)	329
175	The Celtic tribes which invaded Italy, mentioned by Livy and Polybius, and by Julius Caesar (after Pare 1991, fig. 10)	330
176	Celtic territorial expansion in the 5th century BC (after Nash 1985, fig. 57)	332
177	(A) Late La Tène Celtic warrior reconstructed on the basis of grave 1178 at Wederath and classical accounts (after Haffner 1989c, Abb. 6); (B) Reconstruction of Middle La Tène female dress with fibulae and bronze belt (after Husty 1989, Abb. 5)	337
178	The relationship between age at death, grave goods and sex at Middle La Tène cemeteries in Bohemia (after Waldhauser 1987, Abb. 6)	338
179	(A) Local settlement structure during Late Hallstatt and Middle La Tène in Bilina, Bohemia (after Waldhauser 1986b, Taf. 2); (B) Model of later La Tène colonisation in Central Europe (after Waldhauser 1984b, Abb. 2)	339
180	Reconstruction of the settled landscape in the Merzbach valley area c. 700 BC and 100 BC (after Simons 1989, Abb. 68 and 69)	341
181	Celtic oppida and the distribution of wheel-turned pottery (based on Roymans 1987, fig. 10.1 and Lorenz 1986, Abb. 1)	344
182	Comparative chart of some Late La Tène items from oppida throughout Europe, demonstrating the intensity of contacts and the resulting similarity of production (after Lorenz 1986, Abb. 2)	347
183	Reconstruction of entrance and two period fortifications at	

	Manching, Bavaria (after Lorenz 1986, Abb. 4 and 8)	348
184	Suggested nature of trade contacts between the oppidum of Colchester/Camulodunum and its hinterland and external areas (after Collis 1984b, figs. 9–21)	349
185	Fragment of iron neck-chain and reconstruction of its use (after Lorenz 1986, Abb. 38)	350
186	(A) Schematic plan of Late La Tène <i>Viereckschanzen</i> and possible reconstruction (after Venclova 1993, fig. 2; Pauli 1991, Abb. 126); (B) Plans of the wooden structures inside the <i>Viereckschanzen</i> , considered as possible shrines (after Venclova 1993, fig. 3)	351–352
187	Ground plan of the <i>Viereckschanze</i> at Gournay-sur-Aronde, France, reconstruction of palisade and ditch, and the position of sacrificed bones placed in the ditches according to specific rules (after Lorenz 1986, Abb. 71; Brunaux 1988, 9)	354
188	Reconstruction of rituals in the early phase of Figure 187 at Gournay and in the later phase (after Rapin 1982, Abb. 7a and 72)	355
189	Distribution of Early La Tène tumuli and flat graves, Middle La Tène flat graves and Late La Tène oppida and hillforts in Bohemia (after Collis 1975, fig. 29)	357
190	Major trade routes in the 2nd millennium BC in the Eastern Mediterranean, with a suggested link to a Northwest Anatolian/Black Sea trade network (based on Klengel 1978, Abb. 8, Buchholz 1983, Abb. 10)	360
191	Distribution of selected Early Bronze Age items (mainly Br. A2) testifying to the relations between Anatolia/the Aegean, East Central Europe and the Nordic area (after Schauer 1985, Abb. 19)	361
192	Distribution of amber spacer-plates (based on Harding 1984, fig. 17, von Hase 1990, Abb. 2, 3, 19, Struwe 1971, Taf. 26)	362
193	Ox-hide ingots (after von Hase 1990, Abb. 17)	363
194	Mycenaean sites in the Argive plain, Greece: major centres form the centre of the Thiessen polygon cell network representing putative central-place territories (after Bintliff 1977, fig. 1)	364
195	The Atlantic Copper Age of the later 3rd millennium (after Schauer 1984a, Abb. 5)	366
196	Distribution of Early Bronze Age golden twisted earrings of East Mediterranean origin, ox-hide ingots and Arretton blades in Britain and related East Mediterranean pieces (after Briard 1990, fig. 7; von Hase 1990, Abb. 19; Schauer 1984a, Abb. 38)	367
197	(A) Early Bronze Age (A2) hamlet from Zürich Mozartstrasse in its early and later phases (after Primas 1990, Abb. 2 and 3); (B) The relationship between wild animals and domesticated animals	

	from the Neolithic to the Early Bronze Age at Zürich Mozartstrasse, based on the number of bones (after Schibler 1987, Abb. 218, 219)	369–370
198	(A) The Early Bronze Age cemetery at Gemeinlebarn, divided into clan sections and family groups (after Neugebauer 1991, Abb. 17); (B) Age structure of the buried population at Gemeinlebarn (redrawn after Teschler-Nicola 1987, 231)	371–372
199	Gemeinlebarn: reconstruction of Bronze Age grave robbing in the cemetery (after Neugebauer 1991, Abb. 34)	372
200	The size of large fortified settlements in the Rumanian Carpathians during the Early and Middle Bronze Age and the Late Bronze Age and Hallstatt period (after Horedt 1974, Abb. 2)	373
201	The Early Bronze Age settlement at Barca, Slovakia (after Vladar 1973)	373
202	Reconstruction of houses and wall decorations at Feudvar, an Early Bronze Age tell settlement on the Danube (after Hänsel and Medovic 1991, Abb. 10, 11)	375
203	Early Bronze Age engravings and depictions of two-wheeled chariots: with the exception of the two depictions on pots, above right from a burial at Velke Raskovce, Slovakia, and below that from a burial at Saratov, lower Volga, former USSR, the rest are rock carvings from southern Scandinavia (Scandinavian examples after Kristiansen 1987b, fig. 4.15 and Slovakian and Russian from S.A. 1977, fig. 1; see also Piggot 1983, figs. 48 and 50)	376
204	Basic construction of light two-wheeled Egyptian war chariot; similar constructions were employed in the Otomani Culture and in Southern Scandinavia (after Crouwel and Morel 1981)	376
205	(A) Nordic full-hilted chiefly sword, dagger and belt hook, plus wooden drinking cups from the ‘Store Kongehøj’ barrow with a preserved oak coffin and clothing; the decoration on the wooden drinking cup is lined with tin nails, a costly demonstration of status (after Kristiansen 1987b, fig. 4.11a); (B) ‘Foreign’ flange-hilted warrior sword, fibulae, double button and two tutuli from the ‘Muldbjerg’ barrow with a preserved oak coffin and clothing; the wooden hilt is engraved with small tin nails (after Kristiansen 1987b, fig. 4.11b)	380–381
206	Local settlement areas of the Tumulus Culture in Southern Germany (after Wels-Weyrauch 1989, Abb. 11 and 12)	382
207	Model of some Tumulus Culture groupings and the origin of ‘foreign women’ in burials (after Jockenhövel 1991, Abb. 1)	383
208	Proposed settlement territories around fortified highland sites, surrounded by lowland, open, sites; a missing central site is	

	suggested (based on Bandi 1982, Abb. 8)	386
209	Local schools of European-inspired weapons in Greece and Crete (after Bouzek 1985, fig. 71)	387
210	Proposal for the earliest Urnfield migrations and their areas of origin (after Paulik 1991, 110)	388
211	The Greek/Balkan–Adriatic interaction zone, as defined by early Peschiera daggers, LHIIIC pottery and violin-bow fibulae (based on von Hase 1990, Abb. 4 and 9; Bouzek 1978, Abb. 4)	389
212	Wild and domesticated animal bones at Feudvar, comparing Early Bronze Age with Early Iron Age (after Becher 1991, Abb. 46)	392
213	Changes in the frequency of domesticated animals in Spain from Early Bronze Age El Argar (IIA), via a transition period (IIB), to Late Bronze Age (III) (after Almagro-Gorbea 1986, 412–13)	392
214	Changes in the composition of domesticated animals at Pitigliano in Etruria, from Early Bronze Age (Br A2–3, Phase V) to Late Bronze Age (Br D, Phase III), showing the increasing dominance of sheep; during the same period the consumption of wild game declines (based on De Grossi Mazzorin 1985, Tab. III and V)	393
215	The size of Bronze Age sites (A) in the Early and Middle Bronze Age, (B) Late Bronze Age (after Primas 1990, Abb. 4)	395
216	Reconstruction of successive stages of the hamlet of Padnal, Savoigne, Grison from the end of the Early Bronze Age to the beginning of the Late Bronze Age (after Audouze and Büchsenschütz 1992, fig. 109)	396
217	Models of marriage strategy and social organisation in agrarian and warrior societies	398
218	Model of the social and political dynamics of the two marriage strategies in Figure 217	400
219	Early Iron Age languages in the Mediterranean, as documented by archaeological finds of writing (after Kimmig 1983, Abb. 1)	403
220	Models of changing social and political organisation within a stable territory; case (b) tends to favour the development of a common language, whereas (a) and (c) are more open systems	405
221	Model of the process of language change through time within a tribal social organisation	405
222	Some principles of the learning and transmission of culture, ethnicity and language	407
223	Correlation of settlement density, number of cave settlements, soil development and supposed climatic changes in Central Europe; the figures are only approximate (after Bouzek 1982, fig. 4)	409
