Preface *xiii*
Acknowledgements *xvii*

Introduction **1**
1 3
1.1 Fluids and plasmas in the astrophysical context 3
1.2 Characteristics of dynamical theories 5
1.3 Different levels of theory 7
1.4 Ensembles in phase space. Liouville's theorem 10
1.5 Collisionless Boltzmann equation 13

Part I Neutral fluids **17**
2 Boltzmann equation 19
2.1 Collisions in a dilute neutral gas 19
2.2 The collision integral 22
2.3 The Maxwellian distribution 24
2.4 Boltzmann's H theorem 26
2.5 The conservation equation 28
Exercises 30
3 March towards hydrodynamics 31
3.1 The moment equations 31
3.2 An excursion into stellar dynamics. Oort limit 34
3.3 Zero-order approximation 37
3.4 Transport phenomena 40
3.5 Comparison with experiments 44
3.6 Hydrodynamics at last 46
3.7 Concluding remarks 48
Exercises 51

Table of Contents
More information

4 Properties of ideal fluids 53
4.1 Macroscopic derivation of hydrodynamic equations 53
4.1.1 The equation of motion 54
4.1.2 The equation of energy 57
4.2 The vorticity equation. Incompressible and barotropic fluids 59
4.3 Hydrodynamic equations in conservative forms 61
4.4 Hydrostatics. Modelling the solar corona 62
4.5 Bernoulli's principle for steady flows 65
4.6 Kelvin's vorticity theorem 67
4.7 Potential flows. Flow past a cylinder 70
4.8 Stream function 74
Exercises 76
5 Viscous flows 78
5.1 Tangential stress in a Newtonian fluid 78
5.2 Navier–Stokes equation 81
5.3 Flow through a circular pipe 83
5.4 Scaling and Reynolds number 85
5.5 Viscous flow past solid bodies. Boundary layers 86
5.6 Aerodynamic lift 90
5.7 Accretion disks in astrophysics 94
5.7.1 The basic disk dynamics 96
5.7.2 Steady disk 99
Exercises 102
6 Gas dynamics 104
6.1 Thermodynamic properties of a perfect gas 104
6.2 Acoustic waves 106
6.3 Emission of acoustic waves 109
6.4 Steepening into shock waves. The method of characteristics 111
6.5 The structure of shock waves 114
6.6 Spherical blast waves. Supernova explosions 116
6.7 One-dimensional gas flow. Extragalactic jets 122
6.8 Spherical accretion and winds 125
Exercises 128
7 Linear theory of waves and instabilities 130
7.1 The philosophy of perturbation analysis 130
7.2 Convective instability and internal gravity waves 132
7.3 Rayleigh–Bénard convection 135
7.4 Perturbations at a two-fluid interface 141
7.4.1 Surface gravity waves 145
7.4.2 Rayleigh–Taylor instability 146

More information

7.4.3 Kelvin–Helmholtz instability 147
7.5 Jeans instability 148
7.6 Stellar oscillations. Helioseismology 151
7.7 A few general comments. Beyond the linear theory 155
Exercises 157
8 Turbulence 158
8.1 The need for a statistical theory 158
8.2 Kinematics of homogeneous isotropic turbulence 161
8.3 Kolmogorov's universal equilibrium theory 164
8.4 Turbulent diffusion 169
8.5 The mean equations 172
8.6 Turbulence in astrophysics 173
Exercises 175
9 Rotation and hydrodynamics 177
9.1 Introduction 177
9.2 Hydrodynamics in a rotating frame of reference 179
9.2.1 The geostrophic approximation 181
9.2.2 Vorticity in a rotating frame 182
9.2.3 Taylor–Proudman theorem 183
9.3 Self-gravitating rotating masses 184
9.3.1 Maclaurin spheroids 186
9.3.2 Jacobi ellipsoids 188
9.4 Rotation in the world of stars 189
9.5 Rotation in the world of galaxies 192
Exercises 193

Part 2 Plasmas **195**
10 Plasma orbit theory 197
10.1 Introductory remarks 197
10.2 The effect of a perpendicular force 201
10.2.1 Gradient drift 203
10.2.2 Curvature drift 204
10.3 Magnetic mirrors 205
10.4 Formation of the Van Allen belt 208
10.5 Cosmic rays. Particle acceleration in astrophysics 209
Exercises 214
11 Dynamics of many charged particles 216
11.1 Basic properties of plasmas 216
11.2 Debye shielding. The plasma parameter 220
11.3 Different types of plasmas 221
11.4 BBGKY hierarchy 224
11.5 From the Vlasov equation to the two-fluid model 228

11.6 Fokker–Planck equation 231
11.7 Concluding remarks 234
Exercises 237
12 Collisionless processes in plasmas 238
12.1 Introduction 238
12.2 Electromagnetic oscillations in cold plasmas 239
12.2.1 Plasma oscillations 241
12.2.2 Electromagnetic waves 242
12.3 Warm plasma waves 243
12.4 Vlasov theory of plasma waves 244
12.4.1 Landau damping 247
12.4.2 Two-stream instability 248
12.5 Electromagnetic wave propagation parallel to magnetic field 249
12.5.1 Faraday rotation 253
12.5.2 Whistlers 254
12.6 Pulsars as probes of the interstellar medium 254
Exercises 256
13 Collisional processes and the one-fluid model 258
13.1 Collisions and diffusion in weakly ionized plasmas 258
13.2 Diffusion across magnetic fields 260
13.3 Collisions in a fully ionized plasma 262
13.4 Towards a one-fluid model 264
13.5 Transport phenomena in fully ionized plasmas 268
13.6 Lorentz transformation of electromagnetic fields. The non-relativistic approximation 270
13.7 A brief note on pulsar magnetospheres 272
Exercises 274
14 Basic magnetohydrodynamics 276
14.1 The fundamental equations 276
14.2 Some consequences of the induction equation 280
14.3 Magnetohydrostatics 285
14.3.1 Pressure-balanced plasma column 286
14.3.2 Stability of plasma columns 289
14.3.3 Force-free fields 290
14.4 A note on fusion research 291
14.5 Hydromagnetic waves 294
14.6 Magnetoconvection and sunspots 297
14.7 Bipolar magnetic regions and magnetic buoyancy 302
14.8 Parker instability 306
14.9 Magnetic field as a transporter of angular momentum 308
14.9.1 Magnetic braking during star formation 309

14.9.2 Magnetized winds 310
14.9.3 Jets from accretion disks 312
14.10 MHD applied to weakly ionized plasmas 314
Exercises 316
15 Theory of magnetic topologies 319
15.1 Introduction 319
15.2 Magnetic reconnection 321
15.3 Magnetic helicity. Woltjer's theorems 326
15.4 Taylor's theory of plasma relaxation 330
15.5 Parker's theory of coronal heating 334
Exercises 339
16 Dynamo theory 340
16.1 Magnetic fields in the Cosmos 340
16.2 Origin of astronomical magnetic fields as an MHD problem 343
16.3 Cowling's theorem 346
16.4 Parker's turbulent dynamo. Qualitative idea 348
16.5 Mean field magnetohydrodynamics 350
16.6 A simple dynamo solution 355
16.7 Concluding remarks 361
Exercises 362

Epilogue **363**
17 365
17.1 Virial theorem 366
17.1.1 Application to gravitationally bound systems 369
17.1.2 Some comments on global methods 372
17.2 Relativistic hydrodynamics 372
17.3 Radiation hydrodynamics 377
17.4 A guided tour through the world of astrophysical fluids and plasmas 380
17.4.1 Stellar convection, rotation and oscillations 380
17.4.2 Magnetohydrodynamics of the Sun and the solar system 381
17.4.3 Neutron stars and pulsars 383
17.4.4 Interstellar medium 383
17.4.5 Active galactic nuclei 384
17.4.6 Stellar dynamics 384
17.5 Final goodbye to the reader 385
