
Contents

	Preface	<i>page</i> ix
1	First-order equations	1
1.1	Introductory remarks	1
1.2	Separable equations	13
1.3	Exact equations	16
1.4	Linear equations	20
1.5	Equations of homogeneous type	24
1.6	Special second-order equations	25
1.7	Epilog	28
1.8	Exercises	28
2	Linear second-order equations	42
2.1	Homogeneous equations	42
2.2	Nonhomogeneous Equations	53
2.3	Applications	61
2.4	Exercises	65
3	Power series solutions and special functions	80
3.1	Taylor series	80
3.2	Regular singular points and the method of Frobenius	88
3.3	Bessel functions	99
3.4	Legendre polynomials and Sturm-Liouville problems	106
3.5	Earthquake protection	111
3.6	Exercises	113
4	Systems of linear differential equations	133
4.1	The fundamental matrix	133

viii	<i>Contents</i>	
4.2	The matrix exponential	153
4.3	Exercises	161
5	Stability concepts	176
5.1	Two-dimensional linear systems	176
5.2	Using the phase plane for nonlinear problems	184
5.3	Stability for higher-dimensional systems	190
5.4	Liapunov functions	196
5.5	Exercises	198
6	Singular perturbation methods	208
6.1	Regular and singular perturbations	208
6.2	Linear initial value problems	212
6.3	Nonlinear initial value problems	217
6.4	Two-point problems	223
6.5	A combustion model exhibiting metastability	233
6.6	Exercises	239
	References on singular perturbations	
	General References	243
	Index	244
