Contents

<i>List of contributors</i>	page x
<i>Foreword by Constance Weinstein</i>	xiii
Introduction: Why study cardiovascular development? <i>Warren W. Burggren and Bradley B. Keller</i>	1
The primacy of the developing cardiovascular system	1
The rationale for this book	2
The scope and content of this book	2
Part I Molecular, cellular, and integrative mechanisms determining cardiovascular development	
1 Genetic dissection of heart development <i>Jau-Nian Chen and Mark C. Fishman</i>	7
Introduction	7
<i>Drosophila</i> : The power of genetic screens in invertebrates	7
The mouse: The power of gene knockout	11
The zebra fish: The power of genetic screens of a vertebrate	14
Summary	17
2 Cardiac membrane structure and function <i>Lynn Mahony</i>	18
The developing sarcolemma	18
The transverse tubule system	20
Mitochondria	21
The sarcoplasmic reticulum	21
Resting and action potentials	22
Excitation–contraction coupling	23
Relaxation	24
Conclusion	26
3 Development of the myocardial contractile system <i>Anne M. Murphy</i>	27
Mechanisms for diversity in contractile protein isoforms	27
The contractile process	28
Conclusions and future directions	34
	v

Table of Contents

[More information](#)

vi	<i>Contents</i>	
4	Vasculogenesis and angiogenesis in the developing heart	35
	<i>Robert J. Tomanek and Anna Ratajska</i>	
	Precoronary events	35
	Precursor cells and early vascularization	36
	The coronary arterial system	38
	Postnatal vascular growth	39
	Regulation of coronary vascularization	40
	Unanswered questions	42
5	Extracellular matrix maturation and heart formation	43
	<i>Wayne Carver, Louis Terracio, and Thomas K. Borg</i>	
	Introduction	43
	Cardiac cushion formation	46
	Matrix receptors	47
	Cardiac cushion maturation	47
	Three-dimensional organization of heart cells	49
	Myofibrillogenesis	50
	Neonatal heart development	52
	Proteoglycans	52
	Conclusions and future directions	55
6	Endothelial cell development and its role in pathogenesis	57
	<i>Jackson Wong</i>	
	Introduction	57
	Endothelial cell development	57
	The role of the extracellular matrix in pathogenesis	61
	The unanswered questions	64
7	Embryonic cardiovascular function, coupling, and maturation: A species view	65
	<i>Bradley B. Keller</i>	
	Introduction: Scope and definitions	65
	Embryonic cardiovascular morphometry	66
	Embryonic cardiovascular functional maturation: An overview	68
	Atrial function	68
	Ventricular function	73
	Ventricular–vascular coupling	81
	Functional consequences of ventricular growth acceleration	85
	Functional consequences of ventricular growth deceleration	86
	Cardiovascular consequences of autonomic nervous maturation	86
	Embryonic cardiac mechanics	87
	Significance and future directions of research	87
8	Hormonal systems regulating the developing cardiovascular system	88
	<i>Makoto Nakazawa and Fusae Kajio</i>	
	Introduction	88
	Catecholamines and their effects	89
	Atrial natriuretic peptide and its effects	94
	Endothelin-1	96
	Conclusions and future directions	97

Table of Contents

[More information](#)

<i>Contents</i>	vii
Part II Species diversity in cardiovascular development	
9 Evolution of cardiovascular systems: Insights into ontogeny	101
<i>Anthony P. Farrell</i>	
Introduction	101
Common solutions to common problems	102
The evolution of cardiovascular systems	104
Vertebrate cardiovascular evolution	106
Mammalian cardiac development	109
Forming a divided heart	111
The coronary circulation	113
Future directions	113
10 Morphogenesis of vertebrate hearts	114
<i>José M. Icardo</i>	
The origin of the heart and early morphogenesis	114
Heart induction	117
Heart differentiation	118
Differentiation and morphogenesis	120
The cardiac loop	120
Unanswered questions and some critiques	125
11 Invertebrate cardiovascular development	127
<i>Brian R. McMahon, George B. Bourne, and Ka Hou Chu</i>	
Introduction	127
Annelida	127
Arthropoda	130
Mollusca	137
Echinodermata	140
Hemichordata	142
Urochordata	142
Concluding remarks	144
12 Piscine cardiovascular development	145
<i>Peter J. Rombough</i>	
Introduction	145
Morphogenesis	145
Physiology	153
Adaptive responses	161
Concluding remarks	164
13 Amphibian cardiovascular development	166
<i>Warren W. Burggren and Regina Fritsche</i>	
Introduction	166
Cardiovascular anatomy of amphibians	166
Hemodynamic maturation	171
Diffusive versus convective oxygen delivery in early amphibian embryos: Do vertebrate embryos need hearts?	179

viii	<i>Contents</i>	
	Developmental plasticity of the amphibian cardiovascular and respiratory systems	180
	A perspective on future research	182
14	Reptilian cardiovascular development	183
	<i>Stephen J. Warburton</i>	
	Introduction	183
	Structural development of the circulatory system	184
	Extraembryonic vessels	188
	Erythrocyte and hemoglobin function	188
	Cardiovascular responses to hypoxia	189
	Reptilian development and insights into vertebrate embryonic cardiovascular function	190
15	Avian cardiovascular development	193
	<i>Hiroshi Tazawa and Ping-Chun Lucy Hou</i>	
	Introduction	193
	Embryogenesis and development of the chick heart	194
	Developmental pattern of cardiovascular variables	196
	Model analysis of cardiovascular shunts and cardiac output in the late embryo	204
	Concluding remarks and perspective	208
16	Mammalian cardiovascular development: Physiology and functional reserve of the fetal heart	211
	<i>Kent L. Thornburg, George D. Giraud, Mark D. Reller, and Mark J. Morton</i>	
	Functional adaptations of fetal ventricles	211
	Adaptations of the fetal coronary tree	216
	Summary and future directions	222
Part III Environment and disease in cardiovascular development		
17	Oxygen, temperature, and pH influences on the development of nonmammalian embryos and larvae	227
	<i>Bernd Pelster</i>	
	Introduction	227
	Hypoxia	227
	Temperature	234
	Salinity and pH	238
	Conclusion	238
18	Modeling gas exchange in embryos, larvae, and fetuses	240
	<i>Alan W. Pinder</i>	
	Introduction	240
	Gas exchange models for developing vertebrates	244
	Summary and a perspective	257
19	Principles of abnormal cardiac development	259
	<i>Adriana C. Gittenberger-de Groot and Robert E. Poelmann</i>	
	Introduction	259
