## Table of Contents

|  |      |
|--|------|
| Acknowledgements   | vii  |
| Preface  | ix   |
| Notation   | x    |
| Introduction   | xiii |
| <b>0.</b> Duality and Fourier analysis   | 1    |
| <b>1.</b> Background philosophy  | 16   |
| <b>2.</b> Operator norm inequalities   | 18   |
| <b>3.</b> Dual norm inequalities   | 25   |
| <b>4.</b> Exercises: Including the Large Sieve   | 32   |
| <b>5.</b> The method of the stable dual (1): Deriving the approximate functional equations     | 48   |
| <b>6.</b> The method of the stable dual (2): Solving the approximate functional equations      | 52   |
| <b>7.</b> Exercises: Almost linear, Almost exponential   | 68   |
| <b>8.</b> Additive functions of class $\mathcal{L}^\alpha$ . A first application of the method | 79   |
| <b>9.</b> Multiplicative functions of the class $\mathcal{L}^\alpha$ : First Approach          | 84   |
| <b>10.</b> Multiplicative functions of the class $\mathcal{L}^\alpha$ : Second Approach        | 93   |
| <b>11.</b> Multiplicative functions of the class $\mathcal{L}^\alpha$ : Third Approach         | 101  |
| <b>12.</b> Exercises: Why the form?  | 111  |

vi

|     |   |     |
|-----|---|-----|
| 13. | Theorems of Wirsing and Halász  | 115 |
| 14. | Again Wirsing's Theorem   | 122 |
| 15. | Exercises: The prime number theorem   | 127 |
| 16. | Finitely distributed additive functions   | 133 |
| 17. | Multiplicative functions of the class $\mathcal{L}^\alpha$ . Mean value zero                      | 139 |
| 18. | Exercises: Including logarithmic weights  | 148 |
| 19. | Encounters with Ramanujan's function $\tau(n)$  | 151 |
| 20. | The operator $T$ on $L^2$   | 159 |
| 21. | The operator $T$ on $L^\alpha$ and other spaces   | 169 |
| 22. | Exercises: The operator $D$ and differentiation. The operator $T$ and the convergence of measures | 183 |
| 23. | Pause: Towards the discrete derivative  | 190 |
| 24. | Exercises: Multiplicative functions on arithmetic progressions. Wiener phenomenon                 | 205 |
| 25. | Fractional power Large Sieves. Operators involving primes   | 211 |
| 26. | Exercises: Probability seen from number theory  | 232 |
| 27. | Additive functions on arithmetic progressions: Small moduli                                       | 235 |
| 28. | Additive functions on arithmetic progressions: Large moduli                                       | 239 |
| 29. | Exercises: Maximal inequalities   | 254 |
| 30. | Shift operators and orthogonal duals  | 271 |
| 31. | Differences of additive functions. Local inequalities   | 275 |
| 32. | Linear forms in shifted additive functions  | 285 |
| 33. | Exercises: Stability. Correlations of multiplicative functions                                    | 295 |
| 34. | Further readings  | 302 |
| 35. | Rückblick (after the manner of Johannes Brahms)   | 320 |
|     | References  | 321 |
|     | Author index  | 333 |
|     | Subject index   | 335 |
