## Contents

Introduction	vii
Chapter 1. Gaussian spaces	1
1. Preliminaries	1
2. Gaussian random variables	3
3. Gaussian Hilbert spaces	4
4. Complex Gaussian spaces	12
5. Feynman diagrams	15
Chapter 2. Wiener chaos	17
Chapter 3. Wick products	23
1. Wick products of Gaussian variables	24
2. Wick exponentials	32
3. General Wick products	35
Chapter 4. Tensor products and Fock space	42
1. Spaces	42
2. Operators	45
3. Absolute continuity	53
Chapter 5. Hypercontractivity	57
1. Real hypercontractivity	57
2. Complex hypercontractivity	67
3. Multipliers	72
Chapter 6. Variables with finite chaos decompositions	78
Chapter 7. Stochastic integration	86
1. Brownian motion and Itô integrals	86
2. Stochastic integrals on general measure spaces	95
3. Skorohod integrals	105
4. Complex Gaussian stochastic measures	110
Chapter 8. Gaussian stochastic processes	117
1. The covariance function	117
2. The pseudometric	119
3. Continuity	120
4. The Cameron–Martin space	120
Chapter 9. Conditioning	127
1. Introduction	127
2. Conditional expectations	128
3. Conditional distributions	132
4. Example: Random potential in a network	133

Chapter 10. Pairs of Gaussian subspaces	142
1. Projections and singular numbers	142
2. Measures of dependence	143
Chapter 11. Limit theorems for generalized $U$ -statistics	150
1. $U$ -statistics	150
2. Asymmetric statistics	157
3. Random graphs	165
Chapter 12. Applications to operator theory	184
Chapter 13. Some operators from quantum physics	197
1. The Fourier–Wiener transform	197
2. Annihilation and creation operators	200
3. Position and momentum operators	210
Chapter 14. The Cameron–Martin shift	216
1. The Cameron–Martin shift	216
2. Shifts and the Cameron–Martin space	223
Chapter 15. Malliavin calculus	228
1. The directional derivative	229
2. The gradient operator	236
3. Higher derivatives	239
4. Absolute continuity	240
5. Sobolev spaces	245
6. The $L^2$ case	257
7. Dense subspaces	261
8. The Meyer inequalities	266
9. The divergence operator	274
10. Smoothness	281
11. A new look at the Skorohod integral	283
Chapter 16. Transforms	286
1. The $T$ - and $S$ -transforms	286
2. More general Wick products	293
3. Fock space operators	298
4. Stochastic integration	300
5. The Cameron–Martin shift	304
6. Malliavin calculus	304
Appendices	309
A. The monotone class theorem	309
B. Stochastic processes	311
C. Banach-space-valued functions and random variables	312
D. Polarization	314
E. Tensor products	315
F. Reproducing Hilbert Spaces	323
G. Analytic functions in Banach spaces	326
H. Hilbert–Schmidt operators and singular numbers	327
References	329
Index of notation	335
Index	337
