TECHNIQUES FOR OBSERVING SOLAR OSCILLATIONS 1
Timothy M. Brown

1 ANALYSIS TOOLS AND THE SOLAR NOISE BACKGROUND 3
1.1 Fourier Transforms and Statistics 3
1.2 The Solar Noise Background 10
1.3 Limits to Observable Accuracy 11

2 INSTRUMENTATION FOR MEASURING SOLAR p-MODES 12
2.1 Velocity Measurements 14
2.2 Intensity Measurements 20
2.3 Summary 23

3 ANALYSIS TOOLS FOR HELIOSEISMOLOGY 23
3.1 Spatial Analysis 24
3.2 Transposition 30
3.3 Time Series Analysis & Peak Bagging 30

4 LOCAL ANALYSIS METHODS 33
4.1 Frequencies *vs.* Eigenfunctions 34
4.2 Scattering, Absorption, and Lifetimes 39

TESTING A SOLAR MODEL: THE FORWARD PROBLEM 47
Jørgen Christensen-Dalsgaard

1 INTRODUCTION 49
1.1 A Little History 49
1.2 Definition of the Forward Problem 50

2 PHYSICS OF SOLAR MODELS 51
2.1 Introduction 51
2.2 Microphysics 52
2.3 Macrophysics 56
2.4 Structure of the Solar Convection zone 58
2.5 Overview of Solar Structure 59

3 PROPERTIES OF ADIABATIC OSCILLATIONS 61
3.1 Introduction 61
3.2 What do the Oscillation Frequencies Depend on? 62
3.3 Simple p-mode Asymptotics 64
3.4 Perturbation Analysis of Effects of Model Changes 70

4 APPLICATION TO MODELS AND OBSERVED FREQUENCIES . 79
4.1 Effects of Changes in the Superadiabatic Region of the Convection Zone 81
4.2 Opacity Increase Near the Base of the Convection Zone 82
4.3 Diffusion and Settling of Helium 85
4.4 Opacity Decrease in the Core 90
4.5 The Base of the Convection Zone 93
4.6 The Equation of State 96

5 ANALYSIS OF OBSERVED FREQUENCIES 101
5.1 Asymptotic Analysis of Observed Frequencies 102
5.2 Test of the Equation of State 107
5.3 Matching the Near-Surface Effects 113

6 TOWARDS THE STARS? 115
6.1 η Bootis 117
6.2 Concluding Remarks 125

7 REFERENCES 127

TESTING SOLAR MODELS: THE INVERSE PROBLEM 141
Douglas Gough

Foreword 143

1 INTRODUCTION 144
1.1 About What Can the Eigenfrequencies Tell Us? 148
1.2 What Cannot the Eigenfrequencies Tell Us? 149

2 THE IDEA OF INVERSION 151

3 ON MODEL-CALIBRATION 155

4 DIRECT ASYMPTOTIC INVERSIONS 162

5 FORMULATING LINEAR HELIOSEISMIC INVERSE PROBLEMS 171

6 ON 'SOLVING' LINEARIZED INVERSE PROBLEMS IN ONE DIMENSION 181
6.1 Regularized Least-Squares Fitting (RLSF) 183
6.2 Spectral Expansions and the Annihilator 185
6.3 Linearized Asymptotic Inversions (LAI) 186
6.4 Optimally Localized Averaging (OLA) 187
6.5 Uncertainty and Tradeoff 191
6.6 RLSF v OLA 194
6.7 On the Representation of Localized Averages 198
6.8 The Direct Product of Inversion Algorithms 199

7 LINEARIZED TWO-DIMENSIONAL INVERSIONS 201
7.1 So-called Fully Two-Dimensional Methods 203
7.2 Hybrid Methods 203
7.3 Asymptotic Inversions 206
7.4 1 ⊗ 1 Inversions 206
7.5 A Comment 207

8 TOWARDS REALISM 209
8.1 Uncertain Influence of the Surface Layers 210
8.2 Correlated Errors 212
8.3 On the Stratification of the Convection Zone 214
8.4 Mode Distortion 220

9 REFERENCES 224

GLOBAL CHANGES IN THE SUN 231
J. R. Kuhn

1 INTRODUCTION 233

2 SOME INTERESTING NON-ACOUSTIC OBSERVABLES 234
2.1 Global Observations 234
2.2 Solar Neutrino Variations? 237
2.3 Another Solar Mode? 239

3 INTERPRETING VELOCITY AND SHAPE DATA 240
3.1 Lowest Order: A Hydrostatic Sun 240
3.2 Mean Flows 242
3.3 Turbulent Flows 242
3.4 Generating Mean Flows 244

4 INTERPRETING BRIGHTNESS DATA 246
4.1 Turbulent Heat Flow 246
4.2 How Many Irradiance Components? 247
4.3 Irradiance or Luminosity Changes? 250
4.4 Timescales 254

5 EXPERIMENTING BELOW THE PHOTOSPHERE 258
5.1 Helioseismic Tools 258
5.2 Asphericity 259
5.3 The Asphericity Data and Splitting Coefficients 260
5.4 Mechanisms 264

6 NUMERICAL EXPERIMENTS, DEEP QUESTIONS? 266
6.1 Numerical Experiments 266
6.2 Deeper Mechanisms? 270
6.3 Magnetic or Thermal Variations? 274
6.4 Top 10 List of Needed data and Calculations Relevant to These Problems 275

ACTIVITY IN THE SOLAR ATMOSPHERE AS OBSERVED BY YOHKOH 353
Yutaka Uchida

ABSTRACT 355

1 GENERAL INTRODUCTION 355
1.1 The Satellite YOHKOH 357
1.2 Advantages of Yohkoh Observations 358

2 THE ACTIVE REGION CORONA REVEALED BY YOHKOH . . 360
2.1 Introduction—Previous Notions about Active Region Corona 361
2.2 New Observation of Active Region Corona by Yohkoh 361

3 NEW CLUES TO THE FLARE MECHANISM 367
3.1 Introduction — Previous Notion about Flares 367
3.2 Observations of Flares by Yohkoh 368

4 OBSERVED PHENOMENA IN THE BACKGROUND CORONA . 383
4.1 Introduction — Previous Notion of the Corona 383
4.2 Observation of the Background Corona 384

5 BRIEF COMMENTS ON GLOBAL FEATURES AND CYCLE PHASE-DEPENDENT PHENOMENA SUGGESTED BY YOHKOH 395

6 CONCLUSION 397
