Preface to the revised edition	xi
Preface to the first edition	xii
I Basic concepts	1
1 Regular sequences and depth	3
1.1 Regular sequences	3
1.2 Grade and depth	8
1.3 Depth and projective dimension	16
1.4 Some linear algebra	18
1.5 Graded rings and modules	27
1.6 The Koszul complex	40
Notes	55
2 Cohen–Macaulay rings	57
2.1 Cohen–Macaulay rings and modules	57
2.2 Regular rings and normal rings	65
2.3 Complete intersections	73
Notes	85
3 The canonical module. Gorenstein rings	88
3.1 Finite modules of finite injective dimension	88
3.2 Injective hulls. Matlis duality	97
3.3 The canonical module	107
3.4 Gorenstein ideals of grade 3. Poincaré duality	120
3.5 Local cohomology. The local duality theorem	127
3.6 The canonical module of a graded ring	136
Notes	144
4 Hilbert functions and multiplicities	147
4.1 Hilbert functions over homogeneous rings	147
4.2 Macaulay’s theorem on Hilbert functions	156
4.3 Gotzmann’s regularity and persistence theorem	168
4.4 Hilbert functions over graded rings	173
4.5 Filtered rings	182
4.6 The Hilbert–Samuel function and reduction ideals	188
4.7 The multiplicity symbol	192
Notes	201

viii	<i>Contents</i>
II	Classes of Cohen–Macaulay rings 205
5	Stanley–Reisner rings 207
5.1	Simplicial complexes 207
5.2	Polytopes 223
5.3	Local cohomology of Stanley–Reisner rings 229
5.4	The upper bound theorem 237
5.5	Betti numbers of Stanley–Reisner rings 240
5.6	Gorenstein complexes 243
5.7	The canonical module of a Stanley–Reisner ring 246
	Notes 254
6	Semigroup rings and invariant theory 256
6.1	Affine semigroup rings 256
6.2	Local cohomology of affine semigroup rings 263
6.3	Normal semigroup rings 270
6.4	Invariants of tori and finite groups 278
6.5	Invariants of linearly reductive groups 292
	Notes 298
7	Determinantal rings 300
7.1	Graded Hodge algebras 300
7.2	Straightening laws on posets of minors 306
7.3	Properties of determinantal rings 311
	Notes 318
III	Characteristic p methods 321
8	Big Cohen–Macaulay modules 323
8.1	The annihilators of local cohomology 323
8.2	The Frobenius functor 327
8.3	Modifications and non-degeneracy 331
8.4	Hochster’s finiteness theorem 336
8.5	Balanced big Cohen–Macaulay modules 342
	Notes 346
9	Homological theorems 348
9.1	Grade and acyclicity 348
9.2	Regular rings as direct summands 354
9.3	Canonical elements in local cohomology modules 357
9.4	Intersection theorems 361
9.5	Ranks of syzygies 367
9.6	Bass numbers 372
	Notes 376

<i>Contents</i>	ix
10 Tight closure	378
10.1 The tight closure of an ideal	378
10.2 The Briançon–Skoda theorem	387
10.3 F -rational rings	393
10.4 Direct summands of regular rings	406
Notes	410
Appendix: A summary of dimension theory	412
References	420
Notation	439
Index	444
