|---|-----------|
| Preface   | ix        |
| Preface to second edition                               | xi        |
| Notation  | xiii      |
| <b>1 Introduction and historical background</b>         | <b>1</b>  |
| 1.1 Waring's problem                                    | 1         |
| 1.2 The Hardy-Littlewood method                         | 3         |
| 1.3 Goldbach's problem                                  | 6         |
| 1.4 Other problems                                      | 7         |
| 1.5 Exercises   | 7         |
| <b>2 The simplest upper bound for <math>G(k)</math></b> | <b>8</b>  |
| 2.1 The definition of major and minor arcs              | 8         |
| 2.2 Auxiliary lemmas                                    | 9         |
| 2.3 The treatment of the minor arcs                     | 14        |
| 2.4 The major arcs                                      | 14        |
| 2.5 The singular integral                               | 18        |
| 2.6 The singular series                                 | 20        |
| 2.7 Summary   | 24        |
| 2.8 Exercises   | 25        |
| <b>3 Goldbach's problems</b>                            | <b>27</b> |
| 3.1 The ternary Goldbach problem                        | 27        |
| 3.2 The binary Goldbach problem                         | 33        |
| 3.3 Exercises   | 36        |
| <b>4 The major arcs in Waring's problem</b>             | <b>38</b> |
| 4.1 The generating function                             | 38        |
| 4.2 The exponential sum $S(q, a)$                       | 45        |
| 4.3 The singular series                                 | 48        |
| 4.4 The contribution from the major arcs                | 51        |

| vi   | <i>Contents</i> |
|--|-----------------|
| 4.5 The congruence condition                               | 53              |
| 4.6 Exercises  | 55              |
| <b>5 Vinogradov's methods</b>                              | <b>57</b>       |
| 5.1 Vinogradov's mean value theorem                        | 57              |
| 5.2 The transition from the mean                           | 63              |
| 5.3 The minor arcs in Waring's problem                     | 69              |
| 5.4 An upper bound for $G(k)$                              | 70              |
| 5.5 Wooley's refinement of Vinogradov's mean value theorem | 75              |
| 5.6 Exercises  | 92              |
| <b>6 Davenport's methods</b>                               | <b>94</b>       |
| 6.1 Sets of sums of $k$ th powers                          | 94              |
| 6.2 $G(4) = 16$  | 105             |
| 6.3 Davenport's bounds for $G(5)$ and $G(6)$               | 108             |
| 6.4 Exercises  | 109             |
| <b>7 Vinogradov's upper bound for <math>G(k)</math></b>    | <b>111</b>      |
| 7.1 Some remarks on Vinogradov's mean value theorem        | 111             |
| 7.2 Preliminary estimates                                  | 112             |
| 7.3 An asymptotic formula for $J_s(X)$                     | 119             |
| 7.4 Vinogradov's upper bound for $G(k)$                    | 122             |
| 7.5 Exercises  | 125             |
| <b>8 A ternary additive problem</b>                        | <b>127</b>      |
| 8.1 A general conjecture                                   | 127             |
| 8.2 Statement of the theorem                               | 128             |
| 8.3 Definition of major and minor arcs                     | 128             |
| 8.4 The treatment of $n$                                   | 130             |
| 8.5 The major arcs $\mathfrak{N}(q, a)$                    | 135             |
| 8.6 The singular series                                    | 136             |
| 8.7 Completion of the proof of Theorem 8.1                 | 144             |
| 8.8 Exercises  | 146             |

| <i>Contents</i>                                      | vii        |
| <b>9 Homogeneous equations and Birch's theorem</b>   | <b>147</b> |
| 9.1 Introduction                                     | 147        |
| 9.2 Additive homogeneous equations                   | 147        |
| 9.3 Birch's theorem                                  | 151        |
| 9.4 Exercises  | 154        |
| <b>10 A theorem of Roth</b>                          | <b>155</b> |
| 10.1 Introduction                                    | 155        |
| 10.2 Roth's theorem                                  | 156        |
| 10.3 A theorem of Furstenburg and Sárközy            | 161        |
| 10.4 The definition of major and minor arcs          | 162        |
| 10.5 The contribution from the minor arcs            | 164        |
| 10.6 The contribution from the major arcs            | 164        |
| 10.7 Completion of the proof of Theorem 10.2         | 165        |
| 10.8 Exercises                                       | 166        |
| <b>11 Diophantine inequalities</b>                   | <b>167</b> |
| 11.1 A theorem of Davenport and Heilbronn            | 167        |
| 11.2 The definition of major and minor arcs          | 168        |
| 11.3 The treatment of the minor arcs                 | 169        |
| 11.4 The major arc                                   | 172        |
| 11.5 Exercises                                       | 174        |
| <b>12 Wooley's upper bound for <math>G(k)</math></b> | <b>175</b> |
| 12.1 Smooth numbers                                  | 175        |
| 12.2 The fundamental lemma                           | 177        |
| 12.3 Successive efficient differences                | 186        |
| 12.4 A mean value theorem                            | 187        |
| 12.5 Wooley's upper bound for $G(k)$                 | 191        |
| 12.6 Exercises                                       | 193        |
| <b>Bibliography</b>                                  | <b>195</b> |
| <b>Index</b>   | <b>229</b> |
