## The Ancient Indus

The ancient Indus civilization was erased from human memory until 1924, when it was rediscovered and announced in the *Illustrated London News*. Our understanding of the Indus has been partially advanced by textual sources from Mesopotamia that contain references to Meluhha, a land identified by cuneiform specialists as the Indus, with which the ancient Mesopotamians traded and engaged in other forms of interaction. In this volume, Rita P. Wright uses both Mesopotamian texts and, principally, the results of archaeological excavations and surveys to draw a rich account of the Indus civilization's well-planned cities, its sophisticated alterations to the landscape, and the complexities of its agropastoral and craft-producing economy. She focuses principally on the social networks established between city and rural communities; farmers, pastoralists, and craft producers; and Indus merchants and traders and the symbolic imagery that the civilization shared with contemporary cultures in Iran, Mesopotamia, Central Asia, and the Persian Gulf region. Broadly comparative, her study emphasizes the interconnected nature of early societies.

Rita P. Wright is associate professor of anthropology at New York University. A John D. and Catherine T. MacArthur Fellow, she has conducted archaeological field research in Afghanistan, Iran, and Pakistan. She is the editor of *Gender and Archaeology* and coeditor, with Cathy L. Costin, of *Craft and Social Identity*.

*Case Studies in Early Societies*

*Series Editor*

Rita P. Wright, *New York University*

This series aims to introduce students to early societies that have been the subject of sustained archaeological research. Each study is also designed to demonstrate a contemporary method of archaeological analysis in action, and the authors are all specialists currently engaged in field research.

The books have been planned to cover many of the same fundamental issues. Tracing long-term developments and describing and analyzing a discrete segment in the prehistory or history of a region, they represent an invaluable tool for comparative analysis. Clear, well-organized, authoritative, and succinct, the case studies are an important resource for students and for scholars in related fields, such as anthropology, ethnohistory, history, and political science. They also offer the general reader accessible introductions to important archaeological sites.

Other titles in the series include:

*Ancient Mesopotamia*

Susan Pollock

*Ancient Oaxaca*

Richard E. Blanton, Gray M. Feinman, Stephen A. Kowalewski,  
Linda M. Nicholas

*Ancient Maya*

Arthur Demarest

*Ancient Cahokia and the Mississippians*

## Acknowledgments

---

I especially acknowledge how fortunate I have been to conduct research in South Asia. After twenty-five years, I still consider this region one of the most beautiful in both its landscape and its people. I have been privileged to work with an extraordinary group of archaeologists and to have met and befriended countless local people in villages and towns. Their generosity, hospitality, and sense of history have changed the way I think about the world. I hope I have conveyed in some small measure the historical riches of the region.

This book could not have been written without the benefit of the earlier research of many colleagues. I am especially grateful to Jean-François and Catherine Jarrige for inviting me to participate in the excavations at the site of Mehrgarh. During several field seasons, the Jarriges and other members of their team, Gonzaque Quivron, Marielle Santoni, and Anaick Samzun, generously shared with me their broad knowledge of the archaeology of Baluchistan. My research at Mehrgarh was followed by a longer-term commitment to the Indus site of Harappa. I owe a great debt to members of the Harappa Archaeological Research Project (HARP), first and foremost among them George Dales who initially invited me to join the Harappa team and to Mark Kenoyer and Richard Meadow for continued collaboration. Other Harappa colleagues—Harriet “Rae” Beaubien, Barbara Dales, Brian Hemphill, Kenneth Kennedy, Nancy Lovell, John Lukacs, Marco Madella, Donna Strahan, and Steve Weber—always provided much food for thought and insights into Indus “things.” I also conducted a survey centered around Harappa, and I thank my collaborators on the Beas Regional Survey, Afzal Kahn and Joe Schuldenrein, along with Susan Malin-Boyce, Laura Miller, Mark Smith, and Suanna Selby, for their contributions to the success of the research. Rafique Mughal encouraged me to conduct the survey and was a collaborator in the early stages of the project. Late in the project, I was especially fortunate to work with Reid Bryson, whose knowledge of the climatology of the region gave me a new set of eyes. My path crossed in the field with many students from New York University, the University of

Wisconsin, and Harvard University – Bill Belcher, Sharri Clark, Randall Law, Heather Miller, and Laura Miller – who conducted their dissertation research at Harappa and now are professional colleagues. Their stimulating conversations and world-class projects have added substantially to my understanding of the Indus civilization.

Many friends and colleagues took the time to read chapters and sections of the book at different stages in its preparation. I appreciate their taking the time from their own work to provide me with perceptive comments. My sincere thanks to Norman Crowe, Dale Curran, Louis Flam, Jean Freebern, Dorian Fuller, Kenneth Kennedy, Virginia Kerns, Andrew Lawler, Susan Malin-Boyce, Heather Miller, Heidi Miller, Laura Miller, Kathleen Morrison, Gregory Possehl, Karen Rubinson, Joe Schuldenrein, Matthew Spigelman, Bruce Trigger, Steve Weber, Wilma Wetterstrom, and especially Holly Pittman who gave generously of her time and expertise to walk me through the intricacies of the art of seals and sealings. Kathleen Ehrhardt has my unending gratitude for having read the entire manuscript and made extensive comments on its organization and content. She helped me bring into better focus the themes advanced throughout my book. Four anonymous reviewers of the book proposal and the prepared manuscript provided me with useful commentary. I appreciate the experience and insight they brought to their reviews.

Several colleagues were generous in granting me access to data and permission to use illustrations from their published works. Nilofer Shaikh was most generous in providing me with her unpublished evidence from regional surveys of the Lower Indus conducted by her team from Shah Abdul Latif University. Randall Law aided me immeasurably in preparation of a map identifying raw material sources during a time when he was in the final stages of his dissertation. Ute Franke-Vogt, Gonzague Quivron, Catherine Jarrige, Michael Jansen, Gregory Possehl, the Harappa Archaeological Project, the British Museum, and the American Museum of Natural History provided me with permission for several of the illustrations. The photograph on the book cover was taken in the early 1960s by Munir Khan at Harappa.com.

I am especially appreciative of several research assistants who worked with me on the book. Lia Tsesmeli prepared the majority of the illustrations, creating several original maps, with great skill. Danette Newcomb worked on the figures in their final stages. Jillian Swift was in the unfortunate position of taking on the job of research assistant in the final stages of the book's copyediting, bibliography, and index preparation, and last-minute figure creation and revision. I remain appreciative of her assistance and excellent research skills.

This book is the tenth to be published in the series Case Studies in Early Societies, which I founded with Cambridge University Press. Seven other

books currently are in the works. I am forever grateful for the support and guidance of Jessica Kuper in the United Kingdom who steered me through a successful review process for the series and the first books that were published before her retirement. Her successor, Simon Whitmore, brought strong editorial skills and perceptive understandings of the field of archaeology. More recently, Beatrice Rehl, commissioning editor in the New York office, took on many of the archaeology projects, to which she brings a broad vision of our field and its place in the wider world of scholarship. Finally, I am most grateful for the assistance of Ernie Haim and Sara Black, whose patience and forbearance in spite of the countless deadlines missed gave me the support I needed during the final stages of production.

I could not have written this book without the support of several institutions. New York University provided me with two semester-long sabbaticals during which I completed most of the writing. A grant from NYU made it possible to hire research assistants. I especially owe a debt of gratitude to the Government of the Islamic Republic of Pakistan, Ministry of Culture, Sports, Tourism and Youth Affairs and the Department of Archaeology and Museums for granting me permission to participate in excavations and surveys.

My ability to see this book to fruition is in no small measure due to the support of my parents as I ventured into archaeology and later as I began writing this book. They both passed away before I was able to complete the book, but since they always knew that I could do it, they would not be surprised to see it bound and on shelves today. My family, Dale, Susan, Kara, Dave, Mike, Pat, and Jack are at the core of my being. Their confidence and love mean everything.
