Preface to first edition *page* ix
Preface to second edition xiii
Part I Fundamentals 1
1 Liquid crystalline polymers: a brief history 3
1.1 From rigid-rods to main-chain polymers 3
1.2 The development of side-chain liquid crystalline polymers 5
1.3 New trends: networks and elastomers 6
1.4 Theoretical underpinnings 7
1.5 A bright future for liquid crystalline polymers 7
2 Terminology and concepts 11
3 Stability of liquid crystalline polymers 68
3.1 Introduction 68
3.2 Factors limiting liquid crystallinity in rigid rod-like molecules 71
3.3 Control of mesophase stability in main-chain thermotropic liquid crystalline polymers 75
3.4 Lyotropic rigid-rod polymers 91
3.5 Polymers with mesogenic side-chains 101
3.6 Liquid crystalline polymers with more complex molecular architectures 111
4 Theories of liquid crystallinity in polymers 133
4.1 Introduction 133
4.2 Steric theory of rod-like liquid crystals 134
4.3 Virial theories: the Onsager approach 136
4.4 Flory's lattice model 148
4.5 Orientation dependent interactions: the Maier–Saupe theory 161
4.6 Theories for main-chain polymers with semi-rigid chains 168
4.7 Theories of side-chain liquid crystalline polymers 193
4.8 Phenomenological theories of phase transitions 200
5 Local order and classification 229
5.1 Introduction 229
5.2 Nematic polymers 229
5.3 Cholesteric polymers 244

A. M. Donald, A. H. Windle, and S. Hanna
Table of Contents
More information

	5.4	Smectic polymers	255
	5.5	Other aspects of optical texture	274
	5.6	Crystallisation in liquid crystalline polymers	277
6	Distortions and defects		292
	6.1	Introduction	292
	6.2	Distortions	292
	6.3	Disclinations and point singularities: a general introduction	304
	6.4	Disclination structure in planar geometry	305
	6.5	Disclinations and point defects in three dimensions	315
	6.6	Surface disclinations and walls	340
	6.7	Defects in smectics and cholesterics	345
	6.8	What is special about polymeric liquid crystals?	351
7	Biological liquid crystalline polymers		357
	7.1	Introduction	357
	7.2	Polyelectrolytes	358
	7.3	Helicoids: also known as pseudomorphs	360
	7.4	Lyotropic main-chain polymers	363
	7.5	Side-chain liquid crystalline polymers	375
	7.6	Concluding remarks	380
8	Flow and applied fields		385
	8.1	Introduction	385
	8.2	Flow fields in liquid crystalline materials	387
	8.3	The Leslie–Ericksen theory for viscous flow of nematics	396
	8.4	Miesowicz viscosities	399
	8.5	The role of texture in liquid crystals subject to shear flow	402
	8.6	Shear flow of liquid crystalline polymers	408
	8.7	Mechanical response of liquid crystalline elastomers	417
	8.8	Response of liquid crystalline polymers to electric and magnetic fields	422
	8.9	Instabilities	430
Part II	**Applications**		437
9	Processing and applications of structural liquid crystalline polymers		439
	9.1	Two perspectives on the application of liquid crystalline polymers: an introduction to Chapters 9 and 10	439
	9.2	Rheology	440
	9.3	Processing and the consequences of flow alignment	457
	9.4	Liquid crystalline polymers as structural materials	460
	9.5	Liquid crystalline polymers in blends and composites	483
	9.6	Commercial exploitation of structural liquid crystalline polymers	486
10	Applications of functional liquid crystalline polymers		504
	10.1	Introduction	504
	10.2	Liquid crystalline polymers as optoelectronic materials	504
	10.3	Liquid crystalline polymers in displays	507

Table of Contents
More information

10.4 Semiconducting liquid crystalline polymers 516
10.5 Laser writeable devices 523
10.6 Non-linear optical applications 526
10.7 Sensors and actuators 540
List of symbols 549
Molecule index 558
General index 574
