

Contents

	Preface	<i>page</i> xv
1	Importing data from files	1
	1.1 File operations in general	1
	1.1.1 Locating files	2
	1.2 File types	4
	1.3 Data structures	4
	1.4 Simple ASCII files	6
	1.4.1 Numbers and strings from free-format ASCII files	6
	1.4.2 String–number conversion	9
	1.4.3 Files with embedded comments	10
	1.4.4 Variably named files	13
	1.4.5 File-content catalogs	17
	1.4.6 Numbers and strings from fixed-format ASCII files	20
	1.5 ASCII files created by spreadsheets	22
	1.6 <i>Mathematica</i> files	28
	1.7 DXF files	29
	1.8 Binary files	35
	1.9 References	38
2	Visualizing data	39
	2.1 The art of visualization	39
	2.2 Standard graph-plotting functions	40
	2.3 Augmenting standard <i>Mathematica</i> graphs	42
	2.4 Data fusion	43

CONTENTS

2.5	Coping with awkward data	48
2.5.1	Axis reversal	48
2.5.2	Complex numbers	53
2.5.3	Unwrapping cyclic phase data	54
2.6	Making your own graphs	56
2.6.1	Polar surface plot	57
2.6.2	Bar charts and Manhattan plots	64
2.7	Acquisition-system problems	74
2.7.1	Glitch removal	74
2.7.2	Cyclic errors	76
2.7.3	Stuck ADC or encoder bits	78
2.8	Listening to your data	79
2.8.1	Simple waveforms	80
2.8.2	Listening to the inaudible: Using modulation	82
2.9	References	86
3	Data analysis	87
3.1	Statistical characteristics	87
3.1.1	Preparing data	89
3.1.2	Statistics without numbers	90
3.2	Comparing theory and data	92
3.2.1	Generating theoretical results	92
3.2.2	Plotting theory and data	94
3.2.3	Plotting theory–data differences	97
3.3	Fitting functions to data	100
3.3.1	<i>Mathematica</i> 's built-in fitting functions	100
3.3.1.1	Linear fitting	101
3.3.1.2	Nonlinear fitting	104
3.3.2	Fitting functions to complex data	108
3.3.2.1	Simple RC filter	109
3.3.2.2	LC resonator	112
3.3.3	Spline-based fitting	119
3.3.4	Filtering data to remove noise	128

CONTENTS

	3.3.4.1	Rejecting outliers	128
	3.3.4.2	Smoothing and filtering	133
	3.4	References	141
4		Generating test data	142
	4.1	Creating perfect data	142
	4.2	Creating random numbers	145
	4.2.1	Adding noise to simulated data	146
	4.2.2	Random numbers from custom distributions	152
	4.3	References	157
5		Exporting data	158
	5.1	Basic file operations	158
	5.2	<i>Mathematica</i> output to ASCII files	158
	5.2.1	Evaluated and unevaluated expressions	159
	5.2.2	Definitions	159
	5.2.3	Expressions in C/FORTRAN/TeX forms	160
	5.2.4	Formatted numbers	161
	5.3	<i>Mathematica</i> output to binary files	164
	5.3.1	Numbers	165
	5.3.2	Strings	167
	5.4	References	168
6		Introduction to instrument control and data acquisition	169
	6.1	Anatomy of an instrument data acquisition system	170
	6.1.1	Standards in instrumentation	170
	6.1.2	Designing your software	172
	6.1.3	Layerology	173
	6.1.3.1	Top (application) layer	173
	6.1.3.2	Hardware assessment layer	173
	6.1.3.3	The computing layer	174
	6.2	Coping with your data	175
	6.2.1	Data assessment	176
	6.2.2	Transmission time	176

CONTENTS

6.2.3	Compression	177
6.2.4	Binary and ASCII forms	187
6.3	Safety in laboratory systems	188
6.4	References	189
7	Understanding MathLink	190
7.1	The pons asinorum: <code>addtwo</code>	192
7.2	Using <code>:Evaluate:</code> to include <i>Mathematica</i> code	195
7.3	Putting and getting arguments manually	196
7.4	Passing lists and arrays	198
7.5	Passing arbitrary expressions	202
7.6	Requesting evaluations by the kernel	204
7.7	Handling and recovery of <i>MathLink</i> errors	206
7.8	Handling and recovery of other errors	208
7.9	Troubleshooting and debugging	216
7.10	Large projects	218
7.11	Special topics	220
7.11.1	Unknown result length from your program	220
7.11.1.1	Loopback links	220
7.11.2	Making your function abortable	222
7.12	References	224
8	Interfacing I: a simple serial link	225
8.1	The serial port hardware	226
8.1.1	Electrical connections	226
8.1.2	Serial port parameters	228
8.2	Software specification	230
8.3	The Macintosh software	230
8.3.1	Creating the <code>rs232.π</code> project	231
8.3.2	The application C code	231
8.3.3	The <i>MathLink</i> template file	237
8.3.4	Building the executable program	239
8.3.5	The <i>Mathematica</i> code	239
8.4	The PC/Linux software	242

CONTENTS

8.4.1	Port configuration	242
8.4.2	Port use	243
8.5	Problems?	246
8.5.1	Checking the hardware	246
8.5.2	Debugging the C code	247
8.5.3	Response times	248
8.6	References	248
9	Interfacing II: more advanced links	249
9.1	Design issues	249
9.1.1	Layers	249
9.1.2	Polling versus synchronous function calls	250
9.1.2.1	<i>Mathematica</i> code	251
9.1.2.2	Macintosh Toolbox	251
9.1.2.3	Drivers	251
9.1.2.4	Summary	251
9.1.3	Looping	252
9.1.4	Latency	252
9.2	Handling bare hardware (no support libraries)	253
9.2.1	The template file: <code>SerialDataAcquisition.tm</code>	254
9.2.2	The C code: <code>SerialDataAcquisition.c</code>	255
9.2.3	Using <code>SerialDataAcquisition</code>	260
9.3	Handling hardware with vendor libraries	261
9.3.1	One-shot oscilloscope	262
9.3.1.1	The template file: <code>OneShotScope.tm</code>	262
9.3.1.2	The C code: <code>OneShotScope.c</code>	262
9.3.1.3	Using <code>OneShotScope</code>	266
9.3.1.4	Moving on	267
9.3.2	Continuous acquisition (one channel)	268
9.3.2.1	The template file: <code>Oscilloscope.tm</code>	269
9.3.2.2	The C code: <code>Oscilloscope.c</code>	270
9.3.2.3	Using <code>Oscilloscope</code>	274
9.3.3	Streaming data to disk	276

CONTENTS

9.3.3.1	The template file: StreamToDisk.tm	277
9.3.3.2	The C code: StreamToDisk.c	277
9.3.3.3	Using StreamToDisk	282
9.3.3.4	Moving on	282
9.3.4	Generating a waveform	283
9.3.4.1	The template file: Generate- Waveform.tm	283
9.3.4.2	The C code: GenerateWaveform.c	284
9.3.4.3	Using GenerateWaveform	288
9.3.4.4	Moving on	289
9.3.5	Additional projects	290
9.3.5.1	Counting LEDs	290
9.3.5.2	Times Square (block character generator)	290
9.3.5.3	Home heating controls	290
9.3.5.4	Elevator controls	291
9.3.5.5	Dream away	291
9.4	Utility routines	291
9.4.1	The template file: MitlMain.tm	291
9.4.2	The C code: MitlUtil.c	293
9.5	References	299
10	Interface hardware design	300
10.1	Simple buffer circuits	301
10.1.1	Attenuators	301
10.1.2	Amplifiers	302
10.1.2.1	Inverting-summing amplifier	302
10.1.2.2	Differential amplifier	303
10.1.2.3	Going on	304
10.2	Noise control	304
10.2.1	Noise in general	305
10.2.2	Reducing true noise	306
10.2.3	Switch debounce	307
10.2.4	Level detection	307

CONTENTS

10.3	Signal generator	309
10.4	References	310
	Appendix	311
A.1	Defining your own functions: a brief summary	311
A.2	Pure anonymous functions	312
	Index	317
