PREFACE

Thirty years ago, when I discussed with the late Professor Brink my thoughts about doing some work on Aratus, I was inspired by his immediate suggestion that I should undertake an edition of the *Phaenomena* with full introduction and commentary, in view of the growing interest in Hellenistic poetry and the lack of a major edition of this poem. I was fortunate again several years later to have the benefit of his advice and encouragement in response to my sending him a sample of commentary on a hundred lines. At the same time he passed on to me a list of helpful comments from Professor Sandbach. Over the last eight years I have benefited from a wide range of critical comments from Professor Reeve, who also suggested additional material to clarify parts of the scientific background, and put forward new interpretations of the text for me to consider. The lively interest he has shown in all aspects of this widely ignored poem has been very rewarding and helpful. I am also indebted to Professor Diggle for a long list of critical comments and additional references that I would otherwise have missed. This highly innovative poem has been a victim of many misunderstandings, and only selected problems have been adequately discussed in the journals and brief commentaries. I have therefore set out at some length the interpretations and preferred textual readings of different scholars before giving my own conclusions and preferences. I owe a great deal, of course, to those few of my contemporaries who have written on Aratus, most particularly to Jean Martin for his work on the history of the text (1956) and his valuable edition of the scholia (1974). Finally I am deeply grateful to the Cambridge University Press for accepting my typescript and patiently dealing with its many problems.
