Preface	ix
Acknowledgement	xii
1 Factors	1
1.1 von Neumann algebras and factors	1
1.2 The standard form	4
1.3 Discrete crossed products	7
1.4 Examples of factors	10
1.4.1 Group von Neumann algebras	10
1.4.2 Crossed products of commutative von Neumann algebras	12
1.4.3 Infinite tensor products	17
2 Subfactors and index	19
2.1 The classification of modules	19
2.2 $\dim_M \mathcal{H}$	23
2.3 Subfactors and index	28
3 Some basic facts	33
3.1 The basic construction	33
3.2 Finite-dimensional inclusions	36
3.3 The projections e_n and the tower	41
4 The principal and dual graphs	47
4.1 More on bimodules	47
4.2 The principal graphs	50
4.3 Bases	54
4.4 Relative commutants <i>vs</i> intertwiners	59
5 Commuting squares	65
5.1 The Pimsner–Popa inequality	65
5.2 Examples of commuting squares	70
5.2.1 The braid group example	70
5.2.2 Spin models	71
5.2.3 Vertex models	71
5.3 Basic construction in finite dimensions	72

5.4	Path algebras	77
5.5	The biunitarity condition	80
5.6	Canonical commuting squares	89
5.7	Ocneanu compactness	92
6	Vertex and spin models	101
6.1	Computing higher relative commutants	101
6.2	Some examples	111
6.3	On permutation vertex models	115
6.4	A diagrammatic formulation	122
Appendix		133
A.1	Concrete and abstract von Neumann algebras	133
A.2	Separable pre-duals, Tomita–Takesaki theorem	134
A.3	Simplicity of factors	135
A.4	Subgroups and subfactors	136
A.5	From subfactors to knots	141
	Bibliography	151
	Bibliographical Remarks	156
	Index	160
