Subject index

- abstinence: versus harm reduction approach, 205; as treatment goal, 201–202
- academic attainment/functioning: depression consequences, 348–349; and duration of work, 458–461; and intensity of work, 437, 450, 455, 458–461; problem behavior link, 113; Woodlawn study measures, 370; work effects on, 431–434, 437, 450, 455, 458–461
- Add Health, *see* National Longitudinal Study of Adolescent Health
- adolescent-limited problems, 168–169, 194, 528–529, 539
- adolescent mothers: and maturity level, 285; normative perspective, 277–278
- adulthood transition, *see* role transition
- African Americans: cocaine abuse variations, 47–48; girls' pregnancy decisions, 301–302; girls' pubertal development, 293; perceived cohesion, and school size, 250–251; progression of sexual behavior, 290; sexual maturity timing, girls, 287–288; substance dependence rates, 72–74
- age at first intercourse: decrease in, 271, 278–279; gender differences, 296; off-time effects, 286; and permissiveness, 278–279; and puberty timing, 287; racial differences, 293; research focus, 288–289; timing dimension, 284
- age factors: aggression, 120, 125, 127; depression, 331–343, 353; drug dependence rates, 69–72; marijuana dependence, 74–79; problem behaviors, 92–94, 120, 137–140
- aggregation, and research design, 16
- aggression: age effects, 120, 125, 127; co-occurrent problems, boys, 90–144; drinking problems link, 190; early drug use link, 155; family predictors, 103–104, 125–126; gender differences, 29–30; individual predictors, 102–103, 125–126; macro predictors, 104–105, 125–126; Pittsburgh Youth Study, 94–95, measures, 102; risk factors, 113–127; Woodlawn longitudinal study, 374–389
- alcohol abuse/dependence: in adults, early substance use effects, 163–166; age and gender differences, 69–72; college graduates, risk factors, 196–197; current prevention/treatment programs, 197–202; definition, 185–186; developmental pathways, 193–195; ethnic differences, 72–74; etiologic factors, 187–190; National Household Survey, 65–79; rates of, 69; subtypes, 193–195
- alcohol use: age-related patterns, 191; definition, 185–186; etiological factors, 187–190; and intensity of work, 450, 452–455, 469; normative-developmental perspective, 186; parental permissiveness association, 399–422; prevalence, 183–184; Woodlawn longitudinal study, 375–377, 381–383
- Alcoholics Anonymous, 201
- anticipatory socialization, 432–433
- antisocial behavior, 192; *see also* conduct disorder
- anxiety: and affect, 345; Woodlawn longitudinal study, 372, 382
- anxious depressed syndrome: age and gender differences, 337–341; comorbidity, 343–348; consequences, 349; diagnosis, 322–323; major depression relationship, 330; symptoms, 323
- attainment process, and work, 431–434, 471
- attention deficit/hyperactivity disorder: age effects, 120, 125, 127; co-occurrent problems, boys, 90–144; diagnostic systems, 92; family predictors, 103–104, 125–126; individual predictors, 102–103, 125–126; macro predictors, 104–105, 125–126; Pittsburgh Youth Study, 94–95; and progression to problem behaviors, 137, 524; risk factors, 113–127
- Beck Depression Inventory, 327
- behavior genetics: and National Longitudinal Study of Adolescent Health, 251–257; research designs, 252–254; sexual behavior data, 255–257, 533
- behavior problems, *see* problem behavior

558 *Subject index*

- Berlin Youth Longitudinal Study, 526
 biopsychosocial processes (*see also* behavior genetics): prenatal smoking effects, 49–58; puberty timing, 286–287, 304, 521–522, 533–534; sexual behavior, 291–294, 534
 blacks, *see* African Americans
- capitalization, 499–515; in adolescent behavioral development, 499–515; class contexts, 507–511; and crime, 511–515; investment and disinvestment effects, 506–511; protective function, 506; sociogenic and ontogenetic processes, 502; theory of, 502–503; variation in access to, 504–505
- Carolina Longitudinal Study, 31
 case study method, 35–36
 categorical approach, depression diagnosis, 323–329
- Center for Epidemiologic Studies Depression Scale, 327
- The Center for Substance Abuse Treatment, 200
 centering methods, cluster analysis, 20
 “chemical dependency” model, 201
 Child Behavior Checklist, 97, 327–329
 child report, depression, 326–328
 childbearing, and maternal age, 285
 Children’s Depression Inventory, 326
 cluster analysis, 17–27; centering methods, 20; configuration analysis integration, 31–33; developmental research application, 23–26; linkage methods, 20; in longitudinal research, 22–23, 525; and personological approach, 525; range of variables issue, 21; techniques, 19–22; variance methods, 20; Woodlawn study, 373
- cocaine dependence: age and gender differences, 69–72; ethnic differences, 72–74; National Household Survey, 65–79; rates of, 69
 cocaine use, Woodlawn study, 375–376, 382
 cohesion levels, and school size, 250–251
 college students: developmental paths, alcohol drinking, 195–197; substance abuse prevention, 205–207; Transitions Project, 195–197
 community-based programs, 198–199
 comorbidity: depression, 343–348, and gender, 347–348; and suicide, depression, 351–352
 conduct disorder: age factors, 120, 125, 127, 138; alcoholism developmental pathway, 194; co-occurrent problems, boys, 90–144; and depression, suicide risk, 351–352; diagnostic systems, 92; family predictors, 103–104, 125–126; individual predictors, 102–103, 125–126; macro predictors, 104–105, 125–126; Pittsburgh Youth Study, 94–95, measures, 101–102; prenatal smoking link, 58–59; risk factors, 113–127; and tailored substance abuse treatment, 202–203, 207
 configurations, 17–27; cluster analysis integration, 31–33; developmental comparisons enhancement, 23–26; individual pathway analysis in, 32–36; in longitudinal research, 22–23, 31–33
 contagion models, sexual behavior, 292, 295
 contextual approach: adolescent sexual behavior, 248–268, 271; criminal capitalization, 511–515; disengagement from school, 392–422; methodological adaptation to, 396; problem behavior, 395–396; and research design, 16–17
 contraceptive use: and age of first intercourse, 286; health promotion programs, 298–299
 couple prediction models, 264
 covariation approach: limitations, 396–397; and problem behavior, 393–394
 covert behavior: age effects, 120, 125, 127; co-occurrent problems, boys, 90–144; family factors, 103–104, 119, 125–126; individual predictors, 102–103, 125–126; macro predictors, 104–105, 125–126; Pittsburgh Youth Study, 94–95, measures, 102; risk factors, 113–127
 criminal behavior, and early drug use, 155, 163–166
 criminal capitalization, 511–515
 criminal embeddedness, 511–515
 cultural capital: concept of, 503; variation in access to, 504–505
- decision-making ability: and sexual behavior, 301–302, 305; and skill-building, 301
 delinquency (*see also* conduct disorder): “adolescent-limited” form of, 168–169; age factors, 120, 125, 127, 137–138; criminal embeddedness, 513–514; co-occurrent problems, boys, 90–144; family predictors, 103–104, 125–126; individual predictors, 102–103, 125–126; “life-course-persistent” form of, 168–169; macro predictors, 104–105, 125–126; measures, Pittsburgh Youth Study, 100; and parental permissiveness, 399–422; prenatal smoking link, 58–59; risk factors, 113–127; and school engagement level, 418; social class influences, 509–510; and social groups, 30; as theoretical construct, 90–91
 depressed mood, 322–330; age and gender effects, 332, 337–341; comorbidity, 343–344; taxonomy and assessment, 322–330
 depression, 319–354; adult depression predictor, 350–351; age effects, 120, 125, 127, 138, 331–343, 353; alcoholism pathway, 193–194; assessment and taxonomy, 321–330, integrative model, 329–330; behavior checklist measures, 324–329; categorical diagnostic approach, 323–330; clinically referred samples, 341–342; college graduates’ drinking problems predictor, 197; community samples, 342, 349; comorbidity, 343–348; conceptualization, 320–324, 352–353; co-occurrent problems, boys, 90–144;

Subject index

 sex histories: in sex partners, 260; validity, 259
 sexual abuse, prepubertal, 285
 sexual behavior: and adolescent role transition, 270–306; behavior genetics data, 251–257; biological and social interactions, 291–294, 534; contagion models, 292; contextual factors, 248–251; developmental perspective, 281–282; double standard in, 280–281; family context, 294–295; gender effects, 296–298; and health promotion programs, 298–300; historical changes, 271, 278; and lifestyle, 300; National Longitudinal Study of Adolescent Health, 241–268; neighborhood influences, 295–296; as normative, 277–281; peer group influences, 291–292, 295; research impediments, 282; and role transitions, 270–306; in romantic relationships, 256–266; skill-building interventions, 300–302; timing dimension, 283–288; two-sex predictor models, 264
 sexual harassment, 297
 sexual identity: development of, 272, 276–277, 533; and lifestyle, 304; multifactorial model, 303–304; and sexual harassment, 297
 sexual intercourse: early puberty effects, 287; gender stereotypes, 296–298; off-time effects, 286–287; progression to initiation of, 290; research focus, 288–289; societal norms, 279–280; transitional timing of, 284–287
 sexual partners, 305
 sexuality, *see* sexual behavior
 sexually transmitted disease: health promotion programs, 298–300; prevention programs, 298–300
 shared environmental variance, 255–256, 533
 shy/withdrawn behavior: age factors, 120, 125, 127, 138; co-occurrent problems, boys, 90–144; Pittsburgh Youth Study, 94–95, measures, 102; predictors, 102–105; risk factors, 113–127
 skill-building technique: and health promotion approach, 300–301; sexual risk behavior, 300
 smoking (*see also* nicotine dependence): and high school employment, 455, 457, 469; National Household Survey, 65–79; parental influences, 49–50; prenatal effects, 50–54, 535–536, nicotine mechanism, 55–58, 535–536
 social bonds: measures, 371; as protective factor, 388, 527–528; Woodlawn longitudinal study, 379–380, 383–384, 387–388, 527–528
 social capital: conceptual aspects, 503–504; and girls’ work outcome, 465; social class effects, 169; variation in access to, 504–505; work effects on, 433, 465, parental beliefs, 439–440
 social class: and capitalization, 506–511; and drug use long-term outcome, 169
 social closure, 504
 social cognitive map, 31
 social cohesion, 250–251
 social control theory: problem behavior, 395–396; and school engagement, 420–422
 social impairment, and depression, 348–349
 social networks: configuration and cluster analysis, 31–33; methodological advances, 28, 31–33; propinquity effects, 29; and social capital, 504; as unit of analysis, 27–30
 social role performance (*see also* role transitions): part-time work effects, 392–422, 425–490; Woodlawn longitudinal study, 366–389
 social skills training, 203
 socioeconomic status: and capitalization, 506–511; Woodlawn longitudinal study, 374–378, 381, 385
 sociometrics, 29
 “sociopathic alcoholics”: developmental pathway, 193–194; targeted treatment, 202–203, 207
 space-contracting clustering, 20
 space-dilating clustering, 20
 stage-termination hypothesis, 286
 status attainment, and work, 431–434, 471
 statutory rape, 297
 stepped care treatment, 209
 substance abuse (*see also* drug abuse/dependence): alcohol abuse; current intervention approaches, 197–202; and depression, suicide risk, 351–352; epidemiology, 63–79; etiology and treatment link, 182–210; life-span perspective, 43–80; mother–daughter prenatal factors, 49–63; patient–treatment matching, 182–210; protective factors, 44–45; theoretical issues, 46–47
 substance use (*see also* drug use): alcohol use; age factors, 120, 125, 127, 138, 191; co-occurrent problems, boys, 90–144; family predictors, 103–104, 125–126; individual predictors, 102–103, 125–126; macro predictors, 104–105, 125–126; normative developmental perspective, 186; parental permissiveness relationship, 399–422; Pittsburgh Youth Study, 94–95, measures, 100–101; risk factors, 113–127; versus substance abuse, definition, 185–186; Woodlawn longitudinal study, 387–389
 Substance Use Scale, 99

564 *Subject index*

- suicide, 351–352
 syndrome approach, depression, 322–324
 tailored treatment, *see* patient-treatment matching
 taxonomy, and depression, 321–329
 teachers' report, depression assessment, 335
 teen pregnancy: African American girls'
 decision-making, 301–302; health promotion
 programs, 298–302; prevention programs,
 298–300; victim-predator model, 297
 temperament: and depression, girls, 537; and
 sexual behavior, 294
 testosterone: sexual behavior influence, 292–294;
 social environment interactions, 293–294,
 534
 tetrachoric correlation, 107
 thrill-seeking, and risky driving, 224–225, 532
 timing factors: in adolescent sexuality, 282–288;
 in developmental research, 14, 16
 trajectories of development, *see* developmental
 trajectories
 transitions, *see* role transitions
 The Transitions Project, 195–197
 Treatment Improvement Protocol, 200
 “turning points,” 273
 12-stem programs, 201
 two-sex prediction models, 264
 unconventionality: externalizing problems basis,
 393–394; problem behavior theory, 390–394;
 social control theory, 395–396
 unemployment: gender differences, 447, 465,
 467, 471; life history calendar, 445–447
 variance methods, cluster analysis, 20
 withdrawn behavior, *see* shy/withdrawn behavior
 Woodlawn longitudinal study, 367–389, 510
 work, 392–422, 425–491, 537–538 (*see also* high-
 intensity work; low-intensity work; part-
 time work); adult attainment effects, 431–
 434, 450–473; alcohol use effects, 452–455;
 continuity across life course, 470; and de-
 pressive affect, 452–453; and disengagement
 from school, 392–422; duration of, 440–445,
 450–473; identity formation link, 429–431,
 472; and marriage timing, 445–449; negative
 and positive consequences, 470–471, 522–
 523; outcomes, 450–473; parental beliefs,
 439–440; and parenthood timing, 445–449;
 patterns during high school, 440–445; “pre-
 cocious development” precipitant, 431, 465,
 472; quality of, 438–439, 472–473; and
 school activities involvement, 430; and self-
 concept, 452, 468; and social background,
 444–445; and transition to adulthood, 425–
 491, 537–538; Youth Development Study
 data, 434–491
 Youth Development Study, 434–491
 Youth Self-Report, 328
