Subject Index

The subject index is organized in two sections. The first section is a special index designed to facilitate comparisons of the working memory theories represented in the volume. It provides pointers to the pages in the text that are most relevant to the respective designated theoretical questions (see Table 1.1, pp. 5–6); there may be other parts of the text that also refer to the issues raised in those questions (particularly Chapters 4 and 8, which address the designated questions in a more distributed manner than other chapters).

The second section is a regular subject index that picks up more specific terms used in each chapter. Whenever an entry in the regular subject index refers to one or more of the designated questions, see also the corresponding entries in the first section.

Index for the Eight Designated Questions

Note: The numbers in parentheses designate the chapter numbers; for example, 6–7(1) means pp. 6–7 of Chapter 1.

Index for Technical Terms and Concepts

Note: The notations n, t, and f mean the occurrence of the designated terms in footnotes, tables, and figure captions, respectively.

access consciousness, 431–2. See also consciousness
acoustic similarity effects, 359
acoustic subsystem (AC), see Interacting Cognitive Subsystems (ICS)

acquisition rules, see Soar architecture
action times, see ACT-R (or ACT) architecture
active gating mechanism, see gating
active maintenance, 292, 307, 335, 375–6, 378–9, 385–6, 390–1, 394–6, 399.

source activation, 21, 141–8, 151–7, 161, 164, 166–7, 170, 172–4, 178, 430, 449
W (parameter), 141, 145–52, 156–7, 160–70, 172–9, 422, 430, 449, 470
aging, 11, 157, 456–7, 468–9
air-traffic control, 184, 215
alcoholism, 469t
algebra problem solving, 152–4, 419, 424
alpha-arithmetical task, 170–4
Alzheimer's disease, 39–40, 42, 468, 469t
ambiguity resolution, 242–4
amnesic patients, 38, 42, 332
amygdala, 471
angular gyrus, 393
anosognosia, 95
anticipatory attention system, 104, 126t, 344, 461–2, 471
anticipatory cingulate gyrus, 357, 461, 471
anterograde amnesia, 332. See also amnesic patients
anxiety, 469–70
aphasia, 9, 469t
articulation speed, 33, 75–6, 263. See also rehearsal speed; Question 4: The Nature of Working Memory Limitations
articulation-time effect, 195, 203–6, 208–9
articulatory loop, 194n. See also phonological loop
articulatory subsystem (ART), see Interacting Cognitive Subsystems (ICS)
articulatory suppression, 12n, 36, 41–5, 71, 195, 200, 202–8, 321, 420, 455
artificial intelligence, 225
ascending reticular activating system, 94
association cortex, 92
associative memory, 248
atmosphere hypothesis (in reasoning), 44–5
attention, 10n, 20, 63, 105, 121–3, 138, 145, 151, 258, 262, 287, 300, 326, 334, 353, 382, 401, 417, 427, 433, 438, 446, 448. See also anterior attention system; posterior attention system; Question 7: The Relationship of Working Memory to Attention and Consciousness
control of, 341–2, 346, 368, 371, 429
divided, 70, 110, 113
effect view of, 430
resource theories of, 16–7, 85, 458
attention deficit hyperactivity disorder (ADHD), 469t
attention shifting, 70–1, 89, 117–9, 121, 126t, 216
attention switching, 28, 31t, 40, 86, 95, 110, 113, 120, 454, 458–9, 467. See also task switching
attenuating filter theory, 77–8
auditory cortex, 94, 151
auditory imagery, 73, 92
autism, 469t
autoassociative connection, see Controlled and Automatic Processing (CAP2)
autoassociative feedback, see Controlled and Automatic Processing (CAP2)
autobiographical memory, 231, 328–9
automatic processing, 43, 113–4, 341, 350–1, 357, 361t, 365–6, 371, 385, 388–9, 398t, 403
automatic transmission threshold, see Controlled and Automatic Processing (CAP2)
automaticity, 86, 113, 258, 362. See also automatic processing
awareness, see conscious awareness
AX-CPT task, see continuous performance test or task (CPT)
Ayn model (in Soar), 236–7
backward recall, 82–4
basal ganglia, 403
base-level activation, see ACT-R (or ACT) architecture
basic-capacity approach, 260–4
behavioral genetics, 456
biasing function (of prefrontal cortex), 386–8, 395–6, 402, 405
binding function (of hippocampus), 385–8, 396, 399, 402, 464
biological working memory, 468
Subject Index

body state subsystem (BS), see Interacting Cognitive Subsystems (ICS)
bottleneck, 41, 249. See also response selection bottleneck
brain imaging, see neuroimaging
brain-damaged patients, 6t, 18, 28, 31t, 32, 53–4, 88, 117, 150, 264, 336, 419, 432–3. See also frontal-lobe impairments (or damage); short-term memory impairments (or deficits)
broadcast projections, see Controlled and Automatic Processing (CAP2)
Broca’s area, 118, 393, 420
Brodmann areas, 116
bromocriptine, 469
Brooks’ task, 323–4
Brown-Peterson paradigm, 81–2, 437
buffered processing (buffering process), see Interacting Cognitive Subsystems (ICS)
attentional, 62, 68t, 79–80, 85–9, 96, 258, 385, 449
central executive, 30, 37–40, 42, 104, controlled attention, 102, 104, 107–9, 112, 114, 126f, 438, 459
phonological loop, 33, 194, 203
processing, 37, 96
rehearsal, 30, 33
short-term memory (or store), 226, 263–4, 289, 459
short-term working memory (ST-WM), 15, 277, 284, 286, 425, 465–6
Soar’s dynamic memory, 224, 232, 237, 239
storage, 37–8
visuospatial (sketchpad), 35–7, 41
capacity constraints, 226, 239, 244, 383
CAPS architecture, 231. See also 3CAPS architecture
CAP2 architecture, see Controlled and Automatic Processing (CAP2)
Cattell Culture-Fair Test, 107–8, 114–5, 121–2
CCT architecture, 186
cell assemblies, 11, 63
central engine, see Interacting Cognitive Subsystems (ICS)
chess (or chunking), 46–8, 87, 107, 159, 225–6, 263–4, 282, 284, 347–9, 358, 367, 402
cingulate cortex, 357, 461, 471
circular recognition rule, see Soar architecture
cocktail-party phenomenon, 147, 346
codes, types of, see representations, types of cognition in the wild, 191, 218, 426
cognitive aging, 11, 157, 456–7, 468–9
cognitive development; 35, 35–6, 73–6, 103, 111–2, 468–9
cognitive neuropsychology, see cognitive neuroscience
cognitive neuroscience, 1, 18–9, 21, 419, 432–4, 449, 463. See also Question 8: The Biological Implementation of Working Memory
cognitive science, 185, 228
common-question approach (to theory comparison), 3–4, 435–6
cognitive argumentation, 4, 453, 472
comprehension, 38, 225, 236–9, 261, 322. See also Question 5: The Role of Working Memory in Complex Cognitive Activities
discourse (or text), 13, 423, 459–60
language, 3n, St, 9, 12, 40–2, 62–3, 88, 103, 124, 242–3, 300, 311, 320, 327, 332–3, 424, 438
listening, 103, 111
reading, 70, 103, 110–1, 114, 428
sentence, 13, 224, 242, 245, 424. See also parsing; sentence processing; syntactic processing
computation (or computational) span, see working memory span tasks, operation span
computational modeling (or models), 13, 18–9, 22, 136–7, 150, 178, 183–5, 194, 197, 204, 208, 216–8, 225, 376–7, 379, 385, 390, 401, 405–7, 413, 417–8, 437–9, 453
concurrent tapping, 43
condition-action rules, see production rules
configurations of processes, see Interacting Cognitive Subsystems (ICS)
confirmatory factor analysis, 108
Subject Index

conflict resolution, 190
connection weights, 359, 381. See also fast weights; slow weights
connectionist models, 18, 22, 150, 247–8, 331, 345, 354, 359, 363, 368, 434n, 465. See also neural networks; parallel distributed processing (PDP)
conscious awareness, 63, 249, 330, 356, 369, 389, 427, 430–2. See also focus of awareness; Question 7: The Relationship of Working Memory to Attention and Consciousness
consciousness, 143–6, 53, 95–6, 147, 216, 248–9. 300, 326, 329–31, 341, 368–70, 388–9, 403–4, 429–32, 461–2. See also Question 7: The Relationship of Working Memory to Attention and Consciousness
consistent mapping, 87, 113
constraint satisfaction, 382, 388–9, 398, 403, 406
contention scheduling, 314
context (or context-specific) memory, 150, 356, 359, 363, 384
continuous distractor procedure, 82
continuous performance test or task (CPT), 378, 424
AX-CPT task, 378–81, 386, 395, 404
N-back task, 118, 378, 404, 424
control functions (or processes), 7, 17, 40, 52–3, 264, 265n, 417, 446. See also executive control (or functions or processes)
control store, see Executive-Process/Interactive-Control (EPIC) architecture
control structure, 8, 188, 191–3, 213–6, 252, 362
Controlled and Automatic Processing (CAP2), 22, 340–72, 414, 417, 427
autoassociative connection, 344
autoassociative feedback, 341, 368
automatic transmission threshold, 351
broadcast projections, 343
feedback connections, 353
feedback gain, 346
feed-forward projections (or connections), 343, 368
feed-forward projections (or connections), 343, 346, 368
input feedback, 345–6
output gain 346–7
output report, 346
point-to-point connection, 347
priority reports (or signals), 346–53, 355, 362, 365–6, 417
reinforcement signal, 347, 351, 354, 363, 371
controlled attention, 17, 21, 38, 45, 102, 104–17, 122–3, 387, 390, 421t, 422, 425, 427, 430, 433, 438, 446, 448, 454, 459. See also controlled processing
controlled processing, 113, 341, 357, 366, 375–6, 378, 385–6, 388–9, 391, 395–6, 398–406, 424, 427. See also controlled attention
copy process, see Interacting Cognitive Subsystems (ICS)
corpus callosum, 96
correlational dissociations, 456
corsi blocks test, 36
counting, 42–3, 87, 114–6
counting span, see working memory span tasks
cover speech, 189, 193, 196–9, 210
crystallized knowledge, 121
cued recall, 274
decay, 6, 10–1, 66, 71, 81–5, 105, 137, 143–4, 146, 151, 168, 178, 196, 202, 206–7, 210, 214–5, 340, 347, 359, 421t, 438, 448, 457. See also Question 4: The Nature of Working Memory Limitations
decay rate, 140, 169, 240, 341, 414–5, 422. See also Question 4: The Nature of Working Memory Limitations
decay rate parameter (d), see ACT-R (or ACT) architecture
decision making, 285–6, 424, 445, 471
declarative knowledge (or memories), 14, 89, 135, 137–46, 148–9, 151, 154, 167, 171, 188, 214–6, 218, 226, 231, 400, 403, 419, 427
declarative learning mechanism (in ACT-R), see ACT-R (or ACT) architecture
delay tasks, 117–8, 124
delayed alternation, 117
delayed matching-to-sample, 117
delayed response (task), 117, 386
delayed recall, 38, 42, 82
deliberate practice, 270, 283–4
delirium, 431
dementia, 431
depression, 325, 327, 333
depth of processing effects, 322–3
developmental fractionation, 32, 36
dichotic listening, 85–6, 346
digit span, see short-term memory span tasks
digit working memory task, 157–9, 167, 170–2
dishabituation, 78, 91
Subject Index

executive control (or functions or processes), 17, 21–2, 28, 38, 42, 45, 55, 73, 124, 183, 191, 199, 210–1, 213–6, 314, 318, 335, 340–1, 344, 347, 351–71, 385, 402, 406, 416, 418, 431, 433, 446–7, 454–5, 463, 467, 470–3. See also central executive; Question 2: The Control and Regulation of Working Memory

Executive-Process/Interactive-Control (EPIC) architecture, 21, 183–219, 244, 342, 359, 362–3, 368, 370, 413–4, 416, 427–8, 438, 444
control store, 188, 191–3, 212, 214–6
item-chain construction, 197, 198f, 199, 213
modal working memory stores, 191–2, 213–5, 217
motor processors, 183–4, 186–7, 190–1, 193, 213, 217
parsimonious Production System (PPS) interpreter, 189–91
perceptual processors, 183–4, 186–91, 196–202, 213–4, 217
rehearsal chain, 197–9, 201–2
status items, 191, 214
steps, 191
strategy items, 191, 214
symbolic tags, 189
tag store, 188, 192, 211f, 213–5, 217
working memory partitions, 188, 191, 193, 215, 414, 444

expert digit recall, 459–60
expert performance (or skill), 47, 236, 260, 262, 265–6, 270, 272–3, 283–5, 288, 292–3, 367, 415, 428. See also skilled performance

expert-performance approach, 262, 269–72
explicit knowledge (or memory), 389, 403
external action, 86, 458
external memory, 426, 465–8, 474

fast learning, see rapid learning
fast weights, 49, 340, 356, 359, 363, 367–8, 370–1, 427, 444
feedback connections, see Controlled and Automatic Processing (CAP2)
feedback gain, see Controlled and Automatic Processing (CAP2)
feed-backward projections (or connections), see Controlled and Automatic Processing (CAP2)
feed-forward projections (or connections), see Controlled and Automatic Processing (CAP2)
finger loop, 466
fluid intelligence, 38, 46, 102, 105–10, 112–6, 121–3, 459. See also general intelligence (g), intelligence, theories of

distraction, 102, 104, 113
divided attention, 70, 110, 113
domain-generality (of working memory), see Question 3: The Unitary Versus Non-Unitary Nature of Working Memory
domain-specificity (of working memory), see Question 3: The Unitary Versus Non-Unitary Nature of Working Memory
dopamine (DA), 384–5, 390–1, 399–400, 406–7, 469
dopamine receptor agonist, 469
dopamine receptor antagonist, 469
dorsal route (or stream) in visuospatial processing, 333, 393
dorsolateral prefrontal cortex, see prefrontal cortex (PFC): dorsolateral
double dissociation, 35, 332, 434n
dualism, 418
dual-task paradigm (or methodology), 12–3, 32, 55, 103, 110, 145–7, 157, 324, 330, 363, 419, 425, 449, 455, 458. See also interference situations (or performance)
dynamic memory, see Soar architecture: Soar’s dynamic memory (SDM)
dysarthric patients, 33
dysexecutive syndrome, 334, 471. See also frontal-lobe impairments (or damage)
dyspraxic patients, 33
electroencephalogram (EEG), 272
Elliott (patient), 471
embedded clause, 245–7. See also relative clause
embedded-processes model, 21, 62–97
emergent properties (or features), 8, 11, 40, 216, 375, 418, 422–3, 430, 433–4, 438–9, 446–7
emotion, 125t, 469–72
encoding-specificity principle, 268
endogenous activation, 10S, 125t
EPAM model, 473
EPIC architecture, see Executive-Process/Interactive-Control (EPIC) architecture
episodic memory, 42, 231, 237–8, 384
epistemic action, 467. See also external action
event-related potentials (ERPs), 18–9, 68t, 91–2, 150–1, 432–3. See also Question 8: The Biological Implementation of Working Memory
EVR (patient), 471
exceptional memory, 273, 277–8, 280, 284
Subject Index

fMRI, functional magnetic resonance imaging (fMRI)
focal awareness, see focus of awareness focus of attention, see attention: focus of focus of awareness, 62–3, 65, 85–87, 94–6, 330, 356, 427. See also conscious awareness; Question 7: The Relationship of Working Memory to Attention and Consciousness
fragile X syndrome, 469t
frames, 228. See also schema (or schemata)
frontal lobe (or cortex), 19, 94–6, 112, 118, 150, 332–4, 357, 370–1, 393, 398. See also prefrontal cortex (PFC)
frontal-lobe impairments (or damage), 117–23, 150, 157, 332, 334–5, 404, 469t, 471.
functional magnetic resonance imaging (fMRI), 18, 122, 357, 367, 432, 434, 463. See also neuroimaging; Question 8: The Biological Implementation of Working Memory

g, see general intelligence (g)
gating, 102, 361t, 365, 369–70, 382, 388, 390–1, 400, 406
general fluid intelligence (gF), see fluid intelligence
general intelligence (g), 9, 10n, 121–3, 225. See also fluid intelligence; intelligence, theories of
generate and recognize process, see SOAR architecture
global workspace theory (of consciousness), 17, 88
goal (or goal state), 95, 102, 104–5, 135, 138–9, 141–3, 145, 147, 150–1, 156, 159, 171, 176–71, 188, 191–2, 216, 227, 353, 355, 357, 359, 363, 365, 378, 386
goal management, 466
goal-recursion strategy (in problem-solving), 425
granular cells, 344
grouping effects, 327
habituation, 78, 91, 94
haloperidol, 469
Hebbian learning, 405
hemispatial neglect, see neglect hippocampal storage, 356, 359, 370
hippocampus (HCMP), 94, 117, 371, 375, 377–9, 383–5, 387–90, 396–407, 447, 449
binding function of, 385–8, 396, 399, 402, 404
HM (patient), 14
holism, 434
homunculus (or homunculus problem), 8, 39, 311, 335t, 349, 356, 369, 388, 391, 402, 406, 416–8, 447, 471. See also central executive; Question 2: The Control and Regulation of Working Memory human-computer interaction, 13, 22, 184, 215, 218–9, 327
hybrid architecture (or system), 137, 331, 354, 359
hydrocephalus, 469t
ICS architecture, see Interacting Cognitive Subsystems (ICS)
grouping effects, 327
identity transformation, see Interacting Cognitive Subsystems (ICS)
IDXL model, 238–9
image generation, 28, 32
image record, see Interacting Cognitive Subsystems (ICS)
imagery (or mental imagery), 66
auditory, 73, 92
visual (or visuospatial), 49–52, 54–5, 314, 325
vividness of, 53, 432
immediate memory, 32, 239–40, 264, 277
immediate (serial) recall, see serial recall
impasse, see SOAR architecture
implicational subsystem (IMPLIC), see Interacting Cognitive Subsystems (ICS)
implied knowledge (or memory), 231, 403
incidental memory, 267
individual differences, see working memory: individual differences in
individual-differences approach, 13, 102–26, 156–9, 164–7, 240–4, 458. See also Question 5: The Role of Working Memory in Complex Cognitive Activities
information-processing architecture (or models), 16, 183, 185, 187, 189, 217, 289, 433
informational disruption hypothesis, 35
inhibition (or inhibitory) processes, 10, 40, 43, 65, 104–5, 111–3, 146, 157, 382, 394, 401, 403–4, 421t, 454, 457, 468. See also Question 4: The Nature of Working Memory Limitations
inner scribe, 30, 35–6, 49–52, 414. See also visual cache; visuospatial sketchpad
inner speech, 445. See also phonological loop
innerloop, see Controlled and Automatic Processing (CAP2)
input feedback, see Controlled and Automatic Processing (CAP2)
input-output mappings, 324–5, 351, 354, 357, 365–8
intelligence, theories of, 2, 9, 10n, 11, 15, 119, 125, 442. See also fluid intelligence; general intelligence (g)
independent intelligence quotient (IQ), 121–2, 287

magic (or magical) number 7 (plus or minus 2), 11, 87, 89, 263–4, 425
magnetic resonance imaging, see functional magnetic resonance imaging (fMRI)
magnetic source imaging, 151. See also neuroimaging
magnetoencephalography (MEG), 94. See also neuroimaging
maintenance, 6–7, 73, 75, 398–9, 413, 453–4. See also active maintenance;
Question 1: Basic Mechanisms and Representations in Working Memory
matching hypothesis (in reasoning), 44–5
mathematics anxiety, 469
memory records, see Interacting Cognitive Subsystems (ICS)
memory search, 75, 80, 86
memory span tasks, see short-term memory span tasks
mental abacus, 268
mental arithmetic, 12, 40, 42–4, 135, 259, 268, 273, 275, 285, 424, 438. See also Question 5: The Role of Working
Memory in Complex Cognitive Activities
mental imagery, see imagery (or mental imagery)
mental models, 41, 44–5, 229, 241. See also situation model
mental rotation, 50, 323, 395, 463, 467
metaphors of working memory, see working memory metaphors
MG (patient), 50
mismatch negativity (MMN), 90–2, 433. See also event-related potentials (ERP)
mismatch penalty, see ACT-R (or ACT) architecture
modal model of memory, 7, 446, 473. See also working memory, traditional view of
modal working memory stores, see Executive-Process/Interactive-Control (EPIC) architecture
modality effects, 327
Model Human Processor, 187
modularity (modular), 213, 217, 243, 248
monitoring, 28, 40, 104, 118, 285, 322, 454
monkeys, see nonhuman primates
mood, 469–70
morphonolexical subsystem (MPL), see Interacting Cognitive Subsystems (ICS)
motor cortex, 393
motor processors, see Executive-Process/Interactive-Control (EPIC) architecture
motor sequencing task, 150
motor subsystem (MOT), see Interacting Cognitive Subsystems (ICS)
multitask tracking procedure, 87
multiple sclerosis, 469
multiple-task situations (or performance), 184, 187, 190–1, 215, 219. See also dual-task paradigm (or methodology)
Natural Language Soar (NL-Soar), 243–5, 248
nature vs. nurture debate (in intelligence), 11, 15–6
N-back task, see continuous performance test or task (CPT)
neglect, 51–2, 54, 95–6, 371, 431
neocortex, 399
neo-Piagetian approach, 103, 468
neural networks, 49. See also connectionist models; parallel distributed processing (PDP)
neuroimaging, 18–9, 32, 92–4, 96, 117–20, 122–3, 149, 196, 217, 272, 333, 344, 371, 394, 398, 404, 419, 432–4, 444–5, 462. See also functional magnetic reso-
nance imaging (fMRI); positron emission tomography (PET); Question 8: The Biological Implementation of Working
Memory
neuropsychological dissociations, 18–9, 432–4
NL-Soar, see 243–5, 248
nonhuman primates, 19, 94, 117–9, 404, 406, 462. See also macaques
nonsense syllables (or material), 47, 262–3, 285, 289, 311
norepinephrine, 384–5
object subsystem (OBJ), see Interacting Cognitive Subsystems (ICS)
occipital lobe (or cortex), 54, 107, 119
operation span, see working memory span tasks
operator, 227, 229, 243, 248–50
orbital areas (in prefrontal cortex), 394, 471
orienting response, 78–9, 92
output gain, see Controlled and Automatic Processing (CAP2)
output interference, 33–5
output report, see Controlled and Automatic Processing (CAP2)
overhead speech, 189, 193
pandemonium model, 47–9
parallel distributed processing (PDP), 381. See also connectionist models; neural networks
parietal lobe (or cortex), 54–5, 94–6, 117, 119, 217, 357, 370–1, 420, 462
Parkinson's disease, 469
parsimonious Production System (PPS) interpreter, see Executive-Process/Interactive-Control (EPIC) architecture
Subject Index

parsimony, 11, 15, 184, 190, 194–5, 214, 216, 287–8, 420

parsing, 242–5. See also syntactic processing

partial matching, see ACT-R (or ACT) architecture

partial matching penalty, 143, 161n

partial report, 86

partitions (of working memory), 188, 191, 193, 215, 414, 444

perceptual processors (EPIC), see Executive-Process/Interactive-Control (EPIC) architecture

perceptual speed, 46. See also processing speed

performance-operating characteristic (POC), 9n

perturbation model (of memory), 427n

PET, see positron emission tomography (PET)

phenomenal consciousness, 431–2. See also conscious awareness

phenomenological awareness, 431–2. See also conscious awareness; consciousness

phenylethanol (PKU), 469n

Phineas Gage (patient), 471

phonological similarity effects, 37, 41, 145, 195–6, 203–7, 247

phonological store (a component of the phonological loop), 30t, 32, 42, 81, 203, 250t. See also phonological loop; rehearsal process

planning, 259, 279–83, 364, 455, 466

point-to-point connection, see Controlled and Automatic Processing (CAP2)

posterior attention system, 303, 344, 461–2 posterior perceptual and motor cortex (PMC), 375, 377–9, 382–4, 386, 388–402, 404–5, 407, 447

practical memory, 225

prefrontal cortex (PFC), 18–9, 54–5, 94, 96, 105, 116–24, 371, 375, 377–9, 382–408, 419, 431, 433, 444, 447, 449, 463, 471. See also frontal lobe (or cortex)

biasing function of, 386–8, 395–6, 402

dorsolateral, 102, 116–8, 120, 122, 394, 462–3

orbital, 394, 471

ventrolateral, 394

ventromedial, 471–2

premotor areas, 54, 118, 150, 393

primacy effect, 14. See also serial position effect (or curves)

primary memory, 10, 17, 63, 232

primates, see nonhuman primates

principle of revival, see interacting Cognitive Subsystems (ICS)

priority reports (or signals), see Controlled and Automatic Processing (CAP2)

proactive interference, see interference: proactive

problem solving, 12–3, 225, 285–6, 298, 327, 354, 392–3, 406, 445, 467. See also Question 5: The Role of Working Memory in Complex Cognitive Activities

problem space, 227, 230, 251, 472

problem-size effect, 171, 174

procedural knowledge (or skills or memories), 14, 89, 112, 135, 137–8, 167, 183, 188, 214–6, 231, 309–13, 325, 328, 400, 403

procedural learning mechanism (in ACT-R), see ACT-R (or ACT) architecture

process buffering, 306–7, 320–1, 325, 328, 330

processing speed, 10, 214–5, 421t, 422, 448, 455, 457, 468. See also perceptual speed; Question 4: The Nature of Working Memory Limitations

production memory, see Soar architecture

production rules (or condition-action rules), 137–9, 148, 150, 152, 157, 159–60, 168, 171, 183, 185, 188–9, 192, 197, 213–6, 227, 229–30, 237–8, 247, 249, 286, 288–9, 367, 447

production-system architecture (or model), 183, 190, 225–6, 230–1, 248, 250–2, 331, 340, 354, 363, 368, 386, 400, 402, 416, 438, 446–7. See also ACT-R (or ACT) architecture; Executive-Process/Interactive-Control (EPIC) architecture; Soar architecture; 3CAPS architecture

propositional subsystem (PROP), see Interacting Cognitive Subsystems (ICS)

propositions, 188, 242, 245, 318

psychological refractory period (PRP), 184, 458

PV (patient), 332

pyramidal cells (or neurons), 343, 346–7, 370

radial arm maze paradigm, 1

ragtag problem (of the central executive), 8, 39, 447

random generation, 12n, 43–5, 323, 325, 424t, 458n
Subject Index

rapid learning, 365, 375–7, 382–4, 396, 401, 405
rate-limitation principle, see Interacting Cognitive Subsystems (ICS)
Raven Progressive Matrices Test, 107–8, 121–2, 424t
reading span, see working memory span tasks
reasoning, 12–3, 40, 103, 261, 279–80, 445. See also Question 5: The Role of Working Memory in Complex Cognitive Activities
syllogistic, 13, 44–5, 240–2, 424t, 435, 438, 466
recall rule, see Soar architecture
recency effect (short-term), 14, 37, 81–2. See also serial position effect (or curves)
recognition rule, see Soar architecture
recognition knowledge (or memory), see Soar architecture
reductionism, 434
rehearsal, 6–7, 28, 32–4, 51, 71, 82, 156, 158–60, 164, 166, 168, 179, 197–207, 213–4, 263, 274, 277, 284–6, 320, 365, 413, 446. See also Question 1: Basic Mechanisms and Representations in Working Memory
articulatory, 321, 326, 466
covert, 75–6, 86, 90, 194, 197, 203–6, 208, 210, 213–4
mechanisms of spatial information, 462
subvocal, 44, 194–5, 197, 200, 202–4, 317
verbal, 73, 75, 194, 393, 413
rehearsal chain, see Executive-Process/Interactive-Control (EPIC) architecture
rehearsal process (a component of the phonological loop), 32. See also phonological loop; phonological store; rehearsal
rehearsal speed, 75–6, 107. See also articulation speed
reinforcement signal, see Controlled and Automatic Processing (CAP2)
reinforcement-based learning, 407
relative clause, 243. See also embedded clause
representations, types of, 71–4, 144, 141–5, 453–4. See also Question 1: Basic Mechanisms and Representations in Working Memory; Question 3: The Unitary Versus Non-Unitary Nature of Working Memory
acoustic, 304

semantic memory, 279, 287–8
semantic similarity effects, 48
sensory iconic store, 365
sensory memory, 92
sentence processing, 135, 239. See also comprehension, sentence
sequence-length effect, 195, 203, 209, 217, 219
sequencing, 455
serial memory span task, see short-term memory span tasks
serial position effect (or curves), 321, 327. See also primacy effect; recency effect (short-term)
serial recall, 13, 21, 38–9, 42, 82, 107, 320–1, 424t, 428, 436, 449, 459
SF (subject), 149, 274, 279
shadowing, 72f
verbal, 41, 46–9, 53–4, 449–50, 459–60
short-term memory impairments (or deficits), 41, 48–9, 53–4, 88, 264
digit span, 54, 103, 149, 152, 273–9, 283, 360t, 395, 424, 466
word span, 103, 107, 423–4
short-term store (STS), 6, 14, 16, 226, 237, 258, 313–4, 328, 342, 427n, 443
short-term working memory (ST-WM), 15, 257, 260, 265, 268, 273, 277, 283–4, 286, 289–92, 414, 422, 425–6, 428–9, 460, 466. See also long-term working memory (LT-WM); working memory sign language, 247
similarity-based interference, see interference: similarity-based single-cell recordings, 18–9, 346, 462–3
situation model, 287. See also mental models
skill acquisition, 46, 269, 356–7, 366–7, 371
skilled everyday activities, 22, 260, 262, 264–5, 284–5, 425, 454
skilled performance, 185–6, 257, 268–72, 293, 367, 419. See also expert performance (or skill)
skin conductance response (SCR) or skin resistance, 78, 472
slave systems, 28, 30, 32–3, 37–9, 47, 105, 126t, 414, 425, 444. See also phonological loop; visuospatial sketchpad
slow learning, 365, 375
slow weights, 49, 340, 363, 427, 444
smoking urges, 469
Soar architecture, 7, 21, 186–7, 190, 224–53, 342, 353, 359, 362, 366–8, 370, 415–6, 438, 449
acquisition rules, 226
circular recognition rule, 234
generate and recognize process, 235
impasse, 229–30, 233–4, 248, 416
production memory, 228–9, 233, 237
recall rule, 233–5
recognition rule, 234–5, 238
recognition knowledge (or memory), 235, 237–8, 250
Soar’s dynamic memory (SDM), 224, 226–34, 236, 239–40, 244–5, 247, 249, 252, 415, 428
Soar’s learning (or acquisition) mechanism, 226, 229–39, 244, 248, 250, 387
substate, 227, 229, 233–4, 248, 250
superstate, 229–30, 233
somatic marker hypothesis, 471–2
somatic responses (SOM), see Interacting Cognitive Subsystems (ICS)
source activation, see ACT-R (or ACT) architecture
Space Fortress task, 46
spatial span, see working memory span tasks
spatial tapping, 12n, 50, 420, 455
specific language impairment, 468, 469t
speech perception, 32
speech production, 28, 32. See also language production
speed of processing, see processing speed
split-brain patients, 96
status items, see Executive-Process/Interactive-Control (EPIC) architecture
steps, see Executive-Process/Interactive-Control (EPIC) architecture
stimulus-independent thought, 53
strategy items, see Executive-Process/Interactive-Control (EPIC) architecture
Stroop effect (or task), 112, 119–20, 150, 387
Subject Index

subsymbolic processing, 137, 140–2  
subtraction method (in neuroimaging), 434. See also neuroimaging  
subvocalization, 194, 199. See also rehearsal: subvocal  
suffix effect, 34–5, 321, 327.  
supergroup, 276f, 277  
supersate, see Soar architecture  
Supervisory Attentional System (SAS), 17, 104, 314, 386  
supplementary motor area, 118  
supra-marginal gyrus, 54  
switching attention, see attention switching; task switching  
syllogistic reasoning, see reasoning, syllogistic  
symbolic processing, 137–9  
symbolic tags, see Executive–Process/Interactive-Control (EPIC) architecture  
syntactic processing, 252. See also parsing  
syntactic similarity effect, 247  
tag store, see Executive–Process/Interactive-Control (EPIC) architecture  
task switching, 363. See also attention switching  
temporal delay hypothesis, 35  
temporal lobe (or cortex), 54, 94–5, 119, 124, 217  
temporal tagging, 454  
test anxiety, 469  
test-retest reliability, 167, 170, 178  
Tetris (game), 466  
Thalamus, 94–6, 346–7, 361f, 371, 403  
theory comparison, 3–4, 435–6  
think aloud protocols, 272, 287  
3CAPS architecture, 433, 457, 460. See also CAPS architecture  
through-list distractor procedure, 82  
through-list suffix effect, 35. See also suffix effect  
Tower of Hanoi puzzle, 425, 466  
trace decay, 34–5, 81–5. See also decay trade-off, 38–9, 110–1, 264, 459  
Trail Making Test, 120–1  
transient-store approach, 261–2, 264–6  
traumatic brain injury, 469f  
unified theories of cognition, 4, 21, 225, 227, 473  
unified theories of working memory, 473  
unilateral neglect, see neglect  
variable mapping, 113, 349, 367  
ventral route (or stream) in visuospatial processing, 333, 393  
ventral tegmental area (VTA), 343, 347, 390–1  
ventrolateral areas, 394  
ventromedial prefrontal cortex, 471–2  
verbal fluency, 113, 120, 453  
verbal reports, 272, 287  
verbal-conceptual models, 437–9  
vigilance, 87–9, 119  
virtual agents, 417, 431  
virtual short-term memory, 16, 47, 49–52, 267, 429. See also long-term working memory (LT-WM)  
visceral responses (VISC), see Interacting Cognitive Subsystems (ICS)  
visual cache, 30t, 32, 35–6, 49–51, 414. See also inner scribe; visuospatial sketchpad  
visual search, 113, 328  
visual similarity effects, 36–7  
visual subsystem (VIS), see Interacting Cognitive Subsystems (ICS)  
visual-manual tracking task, 184, 310, 324  
visuospatial scratchpad, see visuospatial sketchpad  
visuospatial sketchpad, 3n, 8, 22, 28–30, 32, 35–7, 41, 49, 71, 102, 105, 265, 314, 318, 323, 333, 359, 363, 371, 393, 414, 446. See also inner scribe; slave systems; visual cache  
visuospatial tracking task, 184, 310, 324  
vividness of imagery, 53, 432  
vocabulary learning, 103, 327  
W (parameter), see ACT-R (or ACT) architecture  
Wechsler Adult Intelligence Scale (WAIS), 122  
weight-based memories and storage, 381–3, 396, 399  
Wernicke’s area, 420  
whole report, 86  
Wisconsin Card Sorting Test (WCST), 120–1, 150, 455  
word-length effect, 33–4, 76, 82–3, 85, 321, 327  
word span, see short-term memory span tasks  
working attention, 16, 20, 52, 462  
working memory  
age-related changes in, 11, 157, 456–7, 468–9  
developmental changes in, 33, 35–6, 73–6, 103, 111–2, 468–9
working memory (cont.)
emotional factors influencing, 469
individual differences in, 11, 15, 104–16,
122–3, 136, 156–74, 240–4, 269, 286–9,
457, 459, 468–70. See also Question 5: The Role of Working Memory in Complex Cognitive Activities
intraindividual differences in, 468–70
limitations of, see Question 4: The Nature of Working Memory Limitations
localization of, 248, 433–4, 444. See also Question 8: The Biological Implementation of Working Memory
neurological factors influencing, 468
neuropharmacological factors influencing, 468–70
parallelism with intelligence and attention research, 2, 9–11, 15, 125, 442–3
partitions of, 188, 191, 193, 215, 414, 444
relation to emotion, 470–2
trade-off between storage and processing, 38–9, 110–1, 264, 459
traditional view of, 6–8, 14, 262–4, 443, 473. See also short-term memory (STM)
unified theories of, 473

Subject Index
working memory capacity, see capacity
working memory elements (WME), 149, 177, 460
working memory metaphors
"box" or "place," 2, 147, 157, 176t, 214, 438, 443–5, 450
"juggling," 2
"mental energy" or "resources," 2, 9, 147,
157, 214, 240, 242, 244, 251t, 264, 277,
420, 429–30, 458
"workspace" or "blackboard," 2, 8
working memory span tasks, 80, 108, 424t,
435, 459. See also Question 5: The Role of Working Memory in Complex Cognitive Activities
counting span, 107
operation span, 13, 103–4, 107, 110–1,
114–5, 424t, 425
reading span, 13, 38, 103–4, 107, 110,
158, 264, 286–7, 395, 424t, 425, 456
spatial span, 13, 395–6, 456
writing, 103
