

# Contents

<i>Preface</i>	<i>page</i> xiii
<i>A Word on Genetic Nomenclature</i>	xvii
<b>1 Approaches to the Study of Plant Development</b>	<b>1</b>
Pattern Formation in Development	4
Important Differences between Plant and Animal Development	9
Germ Line Development	9
Role of the Gametophyte	10
Postembryonic Development	11
Cell Movement and the Planes of Cell Division	11
Regeneration and Totipotency	13
Variety of Plant Organs and Cell Types	15
Intercellular Communication	16
Model Plant Systems	18
Cloning Genes Relevant to Plant Development	20
The “Virtual Plant”	24
References	24
<b>2 Cell Lineages and Positional Information</b>	<b>27</b>
Predictability of Cell Fates	27
Marking Cells within a Lineage	28
Founder Cells and Developmental Compartments	28
Determining the Number of Founder Cells by Cell Lineage Analysis	30
Cell Fate Mapping in Early Embryogenesis	35
Experimental Disruption of Cell Lineages	38
Positional Information in Animal Development	38
Positional Information in Plant Development	40
Cell Layers and Chimeras	44
Transmission of Information between Cell Layers	48
<i>Knotted Gene</i>	48

## CONTENTS

	<i>Floricaula</i> Gene	50
	References	53
<b>3</b>	<b>Embryogenesis</b>	<b>55</b>
	Early Events in Embryogenesis	55
	Complexity of Gene Expression in the Embryo	59
	Genetics of Embryogenesis	60
	Embryo-Lethal Mutants	61
	Arabidopsis	61
	Maize	64
	Pattern Mutants	64
	Polarity or Apical–Basal Axis Mutants	66
	<i>Short Integument</i> Mutants	66
	<i>Gnom/emb30</i> Mutants	67
	Segment Deletion Mutants	69
	<i>Monopteros</i> Mutants	69
	<i>Gurke</i> Mutants	71
	Radial Axis Mutants	71
	<i>Knolle</i> Mutants	71
	Summary about Pattern Formation in Embryogenesis	72
	Cell Fate Maps in Embryo Development	73
	<i>In vitro</i> Fertilization and Development of Plant Embryos	75
	Somatic Embryogenesis	76
	References	80
<b>4</b>	<b>Seedling Development</b>	<b>83</b>
	Photomorphogenesis	84
	Light-Insensitive Photomorphogenic Mutants – <i>hy</i> Mutants	85
	Constitutive Light Response Mutants – <i>det</i> and <i>cop</i> Mutants	88
	<i>Fusca</i> Mutants	92
	Downstream Events in Photomorphogenesis	93
	Brassinosteroids and the Control of Photomorphogenesis	94
	Ethylene Mutants and the Triple Response	96
	References	101
<b>5</b>	<b>Shoot Development</b>	<b>103</b>
	SAM Organization – Layers and Zones	104

## CONTENTS

SAM Mutants	108
Mutants That Fail to Maintain Proliferative Cells in the Meristem	108
Mutants That Overproduce Proliferative Cells in the Meristem	114
Cell Determination in the SAM	117
SAM Molecular Biology	119
Phyllotaxy	121
Elongation of Internodes and Gibberellic Acid	127
Phase Changes in Vegetative Growth	129
References	133
<b>6 Leaf Development</b>	<b>136</b>
Leaf Determination	137
Origins of Leaf Primordia in Dicots	139
Dicot Leaf Development	143
Genetics of Leaf Development	146
Dicots	146
Monocots	150
Compound Leaves	154
Trichome Development and Patterning	157
Stomatal Patterning and Spacing	162
References	166
<b>7 Transition to Flowering</b>	<b>169</b>
Transition to Flowering in Pea	170
Transition from Vegetative to Inflorescence Development in Arabidopsis	173
Transition from Inflorescence to Floral Development in Arabidopsis	178
Control of Flowering through the Action of Transgenes	181
Transition from Inflorescence to Floral Development in <i>Antirrhinum</i>	184
Floral Transition in Noninducible Systems	187
References	190
<b>8 Flower Development</b>	<b>192</b>
Founding Cell Populations for Flowers	194
Molecular Genetics and the ABC Model	195
Identification of Floral Homeotic Genes	200

## CONTENTS

Cadasteral Functions of Homeotic Genes	201
Positive Regulation of Homeotic Gene Function	204
Molecular Functions of MADS Box Genes	207
Genes That Mediate the Interactions between Floral Meristem and Floral Organ Identity Genes	210
Control of Whorl Formation and Number of Organs per Whorl	213
Sex Determination – Monecious and Dioecious Plants	216
References	220
<b>9 Development of Floral Reproductive Organs and Gametophytes</b>	<b>222</b>
Anther Development and Pollen Formation	224
Genetics of Anther Development and Pollen Formation	228
Nuclear Male Sterility	229
Cytoplasmic Male Sterility	231
Pistil, Ovule, and Embryo Sac Development	232
Mutants That Affect Pistil, Ovule, and Embryo Sac Development	238
References	242
<b>10 Pollination and Apomixis</b>	<b>244</b>
Pollen Germination and Pollen Tube Growth	246
Pollen Tube Guidance	248
Self-Incompatibility	252
Sporophytic Self-Incompatibility	254
Gametophytic Self-Incompatibility	256
Apomixis	258
References	260
<b>11 Seed and Fruit Development</b>	<b>263</b>
Seed Development	263
Morphogenesis Stage	265
Development of the Endosperm	265
Maturation Stage	270
Desiccation Stage	274
Dormancy and the Control of Germination	275
<i>VPI</i> Gene in Maize	275
<i>ABI-3</i> , <i>LECI</i> , and <i>FUS3</i> Genes in Arabidopsis	277
Fruit Development	280
Fruit Growth	280
Fruit Ripening	282
References	285

## CONTENTS

<b>12</b>	<b>Root Development</b>	<b>289</b>
	The Root Apical Meristem and the Promeristem	290
	Cell Fates and Cell Lineage Analysis	292
	The Role of Positional Information in Root Development	295
	The Origin of the Primary Root during Embryogenesis	297
	Lateral Roots	300
	Genetics of Root Development	303
	Root Hairs	306
	References	309
<b>13</b>	<b>Vascular Development</b>	<b>312</b>
	Cells of the Vasculature	312
	Development of the Stem and Leaf Vasculature	316
	Regeneration of Vascular Strands	320
	Lineage of Vascular Cells in the Leaf	322
	Differentiation of Xylem and Phloem and Programmed Cell Death	325
	Gene Expression during Vascular Differentiation	327
	Mutants That Affect Vascular Development	331
	References	334
	<i>Index</i>	337
