<i>Preface</i>	xi
<i>Acknowledgments</i>	xv
1 Introduction	1
1.1 Why Is Engineering Different?	1
1.2 Thinking Big and Small	3
1.3 Crude and Refined Calculations	5
1.4 The Engine and the Atmosphere – A Broad Outline	7
1.4.1 The Engine	8
1.4.2 The Atmosphere	11
1.4.3 The Engine and the Atmosphere – An Engineering System	14
1.4.4 Summary	16
1.5 Outline of the Book	16
1.6 Problems	18
2 Thermodynamics	21
2.1 What Is the Most Efficient Engine?	21
2.2 Thermodynamic Systems, Thermal Equilibrium, and Temperature	24
2.3 Engineering Cycles and Heat Engines	27
2.4 Energy, Work, and Heat: The First Law of Thermodynamics	28
2.5 Summary of the First Law	34
2.6 Alternative Forms of the First Law	34
2.7 Application of the First Law to a Piston Engine	35
2.8 Reversibility	42
2.9 The Carnot Cycle	45

CONTENTS

2.9.1	A Comparison between a Real Cycle and the Idealized Carnot Cycle: An Example of How to Determine Cycle Efficiency	49
2.10	The Second Law of Thermodynamics	51
2.11	Summary and Discussion	56
2.12	Problems	58
3	Fluid Dynamics	65
3.1	Smooth Streams, Transition, and Turbulence	68
3.1.1	Why Is It So?	71
3.2	Why We Need Pumps: Friction and Stresses in Fluids	72
3.2.1	Laminar Flow	72
3.2.2	Turbulent Flows	77
3.2.3	The Calculation of Pressure Drop in a Pipe	80
3.3	The Bernoulli Equation	83
3.3.1	Some Applications of the Bernoulli Equation	87
3.4	A Further Look at the First Law of Thermodynamics: Open Systems	90
3.5	Gas Turbines and Jet Engines	93
3.6	The Fluid Mechanics of the Internal Combustion Engine	98
3.7	The Use of Computers in Studying the Fluid Dynamics of Engines	102
3.8	Summary and Discussion	105
3.9	Problems	106
4	Heat Transfer	113
4.1	Conduction	115
4.2	Convection	122
4.3	Radiation	132
4.3.1	Radiation in a Vacuum	133
4.3.2	Radiation through Gases	137
4.4	Summary	139
4.5	Problems	140
5	The Atmosphere	145
5.1	Overall Characteristics	147
5.1.1	The Energy and Power of Its Motion	147
5.1.2	The Role of Water	149
5.1.3	Scales of Motion	151
5.1.4	Its Variation with Height	154
5.2	The Greenhouse Effect	159

CONTENTS

5.3	The Atmospheric Boundary Layer	167
5.3.1	Temperature Profiles in the ABL	170
5.3.2	The Richardson Number	173
5.4	Discussion	176
5.5	Problems	177
6	Energy Sources	183
6.1	The Energy in Chemical Bonds: Hydrocarbon and Hydrogen Fuels	185
6.2	The Energy in Atomic Bonds: Nuclear Energy	188
6.3	Renewable Energy	190
6.3.1	An Example of a Renewable Energy Source: The Windmill	191
6.3.2	The Availability of Wind, Sun, and Water	195
6.4	Are Our Energy Sources Finite?	200
6.5	Summary	201
6.6	Problems	202
7	The Engine, the Atmosphere, and the Engineer	207
7.1	Review	207
7.2	Local and Global Issues: Small and Large Numbers Revisited	209
7.3	The Difficulty of Making Predictions	218
7.4	A Crude Estimate of Future Energy Consumption	220
7.5	The Engineer's Dilemma	221
7.6	The Challenge	223
	<i>Appendix: The Equations of Fluid Motion</i>	225
	<i>General References</i>	229
	<i>Specialized Sources</i>	231
	<i>Answers to Problems</i>	232
	<i>Index</i>	237
