Contents

Preface	vii
Acknowledgements	xiv
Part I	
One-dimensional integrable systems	
1 Lie groups	2
2 Lie algebras	6
3 Factorizations and homogeneous spaces	12
4 Hamilton's equations and Hamiltonian systems	18
5 Lax equations	24
6 Adler-Kostant-Symes	31
7 Adler-Kostant-Symes (continued)	37
8 Concluding remarks on one-dimensional Lax equations	43
Part II	
Two-dimensional integrable systems	
9 Zero-curvature equations	54
10 Some solutions of zero-curvature equations	59
11 Loop groups and loop algebras	64
12 Factorizations and homogeneous spaces	68
13 The two-dimensional Toda lattice	77
14 τ -functions and the Bruhat decomposition	85
15 Solutions of the two-dimensional Toda lattice	94
16 Harmonic maps from \mathbb{C} to a Lie group	98
17 Harmonic maps from \mathbb{C} to a Lie group (continued)	105
18 Harmonic maps from \mathbb{C} to a symmetric space	115
19 Harmonic maps from \mathbb{C} to a symmetric space (continued)	120
20 Application: Harmonic maps from S^2 to CP^n	126
21 Primitive maps	136
22 Weierstrass formulae for harmonic maps	146

*Contents***Part III****One-dimensional and two-dimensional integrable systems**

23 From 2 Lax equations to 1 zero-curvature equation	158
24 Harmonic maps of finite type	162
25 Application: Harmonic maps from T^2 to S^2	171
26 Epilogue	178
References	187
Index	193
