Subject Index

- accounting, economic, 95; *see also* social accounting matrix (SAM)
- ad valorem equivalent, 31
- agricultural sector: analytical problems related to reform in, 233; policy reform under Uruguay Round Agreements, 232; subsidies for production, 69
- Almost Ideal Demand System (AIDS), 91–2
- anti-dumping duties: chilling or harassment effect, 47; effect on price, 39
- applied general equilibrium (AGE) model. *See* general equilibrium models
- Armington assumption, 7–8, 60, 158; of exogeneity, 260–1; of product differentiation, 272, 311, 343
- Armington models: log-linear specification, 135–9; market power in, 343–46; measurement of product similarity in, 343; nonlinear specification, 139–42; sensitivity of results from, 145–6
- Atkinson measure, 308
- Balance of Trade Function: in evaluation of welfare change, 76–81, 91–2; modified, 82–3
- Baldwin multiplier effect of trade liberalization, 369
- benchmark equilibrium datasets: CGE models calibrated to, 94; compilation of, 94, 111
- CADIC dumping model, 135
- calibration: defined, 114; dirty, 274; SAMs in CGE model, 114–15
- capital stock accumulation: basic theory, 367–73; model applications with alternative closure rules, 373–6
- CGE model. *See* general equilibrium models
- closure: capital market, 374–6; defined, 115; labor market, 438–43, 480–2; macroeconomic, 266; use of SAMs in building CGE model, 115–17
- Cobb–Douglas demand system, 91–2
- commercial policy: dynamics effects of, 385; flexible aggregation approach to analysing, 189–205, 222–3; Goulder–Eichengreen model of savings and investment, 389–92; tools for exact modeling of, 189; using CGE model to estimate, 205–6; using CGE model to examine effects of, 205–22
- Commercial Policy Analysis System (COMPAS) model, 135, 147
- Compensating Variation: in direct welfare evaluation, 81, 83; measure under Balance of Trade Function of welfare change, 79–81; for single-tariff increase, 85–7; for world price change, 87–9
- compensation measures of welfare change, 79–89
- competition, imperfect: applied trade policy models with, 15; effects of trade policy instruments under, 333–4; partial equilibrium models with, 135–46; scale economies under, 353–60; trade gains in static models with, 365
- competition, perfect: general equilibrium using Armington assumption, 8, 262–70; partial equilibrium models under, 129–35, 142–6; trade gains under, 364–5
- computable general equilibrium (CGE) model. *See* general equilibrium models
- Constant Difference of Elasticities (CDE), 91–2, 287
- Constant Elasticity of Substitution (CES), 91–2

- Constant Elasticity of Transformation (CET), 92
- constant returns to scale (CRTS), 336
- Consumer Subsidy Equivalents (CSEs), 56–7
- costs of transport, 274–5
- countervailing measures, 39
- CRTS, 336
- Customs Co-operation Council Nomenclature (CCCN), 28
- customs tariffs classification, 28
- data: accuracy and currency, 5–7; benchmark equilibrium dataset, 10; estimating international transport costs, 274–5; GTAP database, 273; from household surveys, 306–8; issues in multi-regional AGE models, 270–5; preferential tariff data, 273–4; sets for general and partial equilibrium models, 6; time series in SAM approach, 17–18
- databases: National Accounting Matrix including Environmental Accounts, 522; World Bank Industrial Pollution Projection System, 531
- data sources: GATT Integrated Data Base, 62; GATT Trade Policy Review Mechanism (TPRM), 62; Global Trade Analysis Project (GTAP), 61–2; for macroeconomic SAM, 107–8; for measurement of welfare effect in Bangladesh, 311–12; for 1–2–3 model, 177; OECD agricultural studies, 62; for SAM with sectoral disaggregation, 190; two-country CGE model for Indonesia and Japan, 528–9; UNCTAD Trade Control Measures database, 49–50, 61; Uruguay Round schedules, 62; USDA Economic Research Service, 62; USITC import restraint studies, 62; world agricultural sector, 233; World Bank–UNDP Trade Expansion Project, 62
- duties: alternative rates, 31; composite rates, 31; seasonal rates, 31; specific, 31
- economic structures, Indonesia and Japan, 530–1
- economies of scale. *See* scale economies
- effective rate of assistance (ERA), 58
- effective rate of protection (ERP): shortcomings, 60; as tool of analysis, 58–60; values measured by, 61
- efficiency wage models: incentive and fair wages, 491–2; principal–agent relations, 493–6
- effluent levels in tradable commodities, 523–5
- elasticity of substitution: measuring similar goods from different regions, 343; in trade policy modeling, 18
- embodied effluent trade: concept of, 523; trends in, 525–7
- endogeneity: analysis using household disaggregation, 323–4; of current account balance, 267; in product differentiation, 260–2; in recent growth theory, 386
- equivalent variation: to measure welfare impact of policy change, 314–17, 325
- Equivalent Variation measure: advantages in evaluating welfare effect, 90–1; under Balance of Trade Function of welfare change, 80–1; in direct evaluation of welfare change, 84
- European Union (EU) rate preferences, 32
- Excel (Microsoft Excel for Windows), 170–81
- exchange rates: currency conversion in SAM construction, 107; real exchange rates (RERs), 47–8; as tariff with export subsidy, 47
- exogeneity: analysis using household disaggregation, 324–5; of Armington assumption, 260–1; of current account balance, 267; of long-run growth (traditional growth theory), 38; in product differentiation, 260–2
- export performance requirement, 45–6
- export restraints: agreements, 34–5; as non-tariff measures, 34
- exports: embodied effluent trade in, 523–5; restrictions, prohibitions and taxes on, 45, 70; subsidies applied to, 44–5, 69–70; trade measures to assist or control, 69–70
- factors of production: effect of price changes in, 317–19; mobility, 295; trade models with market distortions, 438–43
- flexible aggregation modeling, 189–205, 222–3
- flowchart of two-market, two-region trade model, 241–2
- frequency or transaction index, 50–1
- General Agreement on Tariffs and Trade (GATT) (*see also* Uruguay Round): Customs Valuation Code, 31; Integrated Data Base, 62; Trade Policy Review Mechanism, 62; use of NTMs under rules of, 36

- General Algebraic Modeling System (GAMS), 178, 314
- general equilibrium models (*see also* 1–2–3 [two-sector, three-good] model; partial equilibrium models): advantages of, 156–7, 169; to analyse trade policy, 189, 198; Armington assumption of product differentiation with perfect competition, 8, 262–70; based on SAM, 94–5; calibration, 94, 114–15, 205, 410–11; comparison of single- and multi-region, 275–95; to compute changes in value, 61; data set, 6; efficiency wage models using, 491–6; endogenous growth channels in, 386; environmental quality measure in, 522; equilibrium conditions, 409; examples of intertemporal analysis, 389–95; exogenous and endogenous wage rigidity using, 480–91; form behavior, 406–7; Global Trade Analysis Project (GTAP) model, 268–9, 285–8; government and foreign sector, 408–9; household behavior, 396–406; impact of Uruguay Round, 258; implementation of two-sector, three-good (1–2–3) model, 169–82; intertemporal optimization in, 385; labor market response to policy shock, 449–9; labor market searching and matching using, 500–503; link to partial equilibrium models, 123–8; to measure welfare effect in Bangladesh, 310; moving from SAM model to, 110–14; multilateral liberalization simulation, 413–21; multi-region, 259–62, 270–2, 275–95; partial approach advantages, 169–70; with sector aggregation and disaggregation, 192–205; selection models using, 499–500; specification components, 192–8; specification of prototype Mexican model, 504–10; static nature of, 205; tariffs on investment simulation, 427–30; temporary protection simulation, 421–7; trade flows and sectoral emission levels in Japan and Indonesia, 528–33; transaction costs using, 496–8; two-sector, three-good (1–2–3) model with Armington assumption, 158–69; two-sector small, 156–69; using SAM with sectoral disaggregation, 189–91; using SAMs in trade policy analysis, 110
- Generalized System of Preferences (GSP), 32
- Gini coefficient, 308, 314–17, 325
- Global System of Tariff Preferences among Developing Countries (GSTP), 32
- Global Trade Analysis Project (GTAP): database of, 61–2, 272–5; global macroeconomic closure, 268; model elasticities of demand for Korea, 285–8; model treatment of savings and investment, 268–9
- Goulder–Eichengreen (GE) model of savings and investment, 389–92
- growth theory: capital accumulation effects, 367–70; classical or traditional (Solow type), 365, 386; dynamic linkages with endogenous growth, 365, 379–80; medium-run accumulation effects, 364
- growth theory, recent (*see also* Armington assumption; competition, imperfect; endogeneity; exogeneity; product differentiation): endogeneity of technology factor, 386; medium-term bonus (MA model), 394; medium-term growth bonus (Baldwin), 386–7; medium-term growth bonus (Jorgenson–Ho), 393
- Harmonized Commodity Coding and Classification System (HS), 28
- Heckscher–Ohlin comparative advantage model, 52
- Heckscher–Ohlin–Samuelson model, 52, 117
- Hicksian Compensating Variation, 81
- Hicksian Equivalent Variation measure, 81
- household sector: data from surveys of, 306–8; disaggregation, 311–20; surveys of income and expenditure in Bangladesh, 311–14
- HS, 28
- imports: tariffs on, 38–9; taxes levied against, 33–4; trade measures to control prices, 67–9; trade measures to control volume, 40–3, 66–67; trade monitoring measures, 69
- income distribution: effect of factor price change on, 317–19; functional and extended functional, 301–2; household specifications in, 306–8; quantification in response to policy changes, 308–9; by size, 302, 314–17; studies of trade policy relation to, 303–6
- increasing returns to scale (IRTS), 336
- IRTS, 336
- job search and matching, 500–503
- Jones Act (1920), United States: economic cost estimates, 220; effect of

- Jones Act (1920), United States (*cont.*)
 hypothetical removal of, 220–2;
 estimates of tariff equivalents for
 restrictions under, 219–20; restrictions
 under, 217–19
- Jones–Neary Specific Factors model, 302
- Jorgenson–Wilcoxon–Ho (JWH) model,
 391–2
- Korea: comparison of economy with other
 regions, 280–1; impact of Uruguay
 Round reforms, 289–94; trade by
 commodity destination and use, 281–5
- labor market (*see also* wage rigidity):
 employee selection models, 499–500;
 job search and matching analyses, 500–
 503; New Keynesian Economics
 approach, 16; transaction costs, 496–8
- law of one price, 160, 162
- Linear Expenditure System (LES), 81, 91–
 2; with leisure, 225–8; standard, 223–5
- linking schemes, 42–3
- log variance of income, 308, 314–17, 325
- Lomé Convention, 32
- macroeconomic closures: single- and multi-
 region effects in Korea, 291–4; in static
 AGE models, 266–9
- market power: in trade models with
 heterogeneous goods, 342–53; trade
 models with homogeneous goods, 338–
 42
- Mercenier–Akitoby (MA) model,
 intertemporal CGE analysis, 393–5
- Merchant Marine Act (1920), United
 States. *See* Jones Act (1920), United
 States
- minimum wage policy: effect on exogenous
 wage rigidity, 480–5; simulations of
 effect on endogenous wage rigidity,
 485–91
- money metric measures, 81–4
- most favored nation (MFN): rates, 31; tariff
 aggregation for AGE modeling, 270–2
- Multi-Fibre Arrangement (MFA), 47, 67
- nominal assistance coefficient (NAC), 56–7
- non-tariff barriers (NTBs), 274
- non-tariff measures (NTMs), 9; analysis
 of, 46; classified by intent, 34–5;
 definitions, 34; discriminatory nature
 of, 47; effect on resource allocation,
 48–9; glossary, 66–70; inventory
 approach to measure, 49–51; modeling
 approaches to measure, 51–2;
 objectives or motives for using, 36;
 subsidy equivalents in measurement of,
 55; tariff equivalent or price wedge to
 measure, 53–5; Trade Restrictiveness
 Index to measure, 57–8
- North American Free Trade Agreement
 (NAFTA), 394
- 1–2–3 (two-sector, three-good) model:
 basic, 158–60; difference from
 neoclassical trade model, 160–1;
 extension and numerical
 implementation, 169–82;
 implementation in Excel program,
 170–1, 173–81; as programming model,
 162–9; substitution and transformation
 elasticities, 161–2
- Orderly Marketing Agreements (OMAs),
 35
- partial equilibrium models (*see also*
 Commercial Policy Analysis System
 [COMPAS] model; Static World Policy
 Simulation [SWOPSIM]: advantages
 of applied, 122; Armington assumption
 of product differentiation, 7–8;
 circumstances for using, 11; closures in
 GTAP framework, 288; conditions for
 more complex, 253; data sets, 6;
 dynamic, 254–5; equations for two-
 market, two-region, 242–5; flowchart of
 two-market, two-region, 241–2;
 imperfect substitution, 135–46; link to
 general equilibrium models, 123–8;
 market coverage choice, 255; multi-
 market, two-region, 240–1; multi-
 market and -region, 13; one-market
 multi-market model, 235–8; perfect
 substitution, 129–35, 142–6; related to
 world agricultural sector, 233–4; simple
 importing country model, 235–8;
 spreadsheet for two-market, two-
 region, 245–53; static, 254; trade
 diagram, 37–8; transparency of, 255;
 two-market model with linkages,
 238–40; two-market multi-market
 with linkages, 238–40; two-region,
 240–1; use of economic theory,
 231
- prices: effect on household of changes in
 factor price, 317–19; in international
 markets, 55; price-gap method, 201,
 213; trade measures operating on, 39–
 40
- price wedge: computing and observation of,
 53–5; variation in, 55

- Producer Subsidy Equivalent (PSE):
 defined, 55–6, 233; difference between
 ERP/ERA and, 60–1
- product differentiation (*see also* Armington
 assumption; substitutability, imperfect):
 in Armington models, 7–8, 272, 311,
 343, 346; endogenous and exogenous,
 260–2; firm-level, 8; firm-level with
 Armington assumption, 346–53; in
 formulation of model, 4; using AGE
 multi-region model, 259–2
- protection: (*see also* effective rate of
 protection [ERP]: defined, 59; Korean
 pre- and post-Uruguay Round, 277–9;
 of U.S. vessels from import
 competition, 217–18
- quantitative restrictions (*see also* quotas):
 analysis using CGE model, 200–205; on
 imports, 34–5
- quotas, 40–1, 47
- RAS method, 117–19, 314
- returns to scale: constant (CRTS), 336; to
 evaluate trade liberalization, 335–6;
 increasing (IRTS), 336
- Ricardo–Viner model, 13, 388
- SALTER model, 270
- SAM. *See* social accounting matrix (SAM)
- scale economies (*see also* returns to scale):
 based on new growth theories, 19–20;
 cost disadvantage ratio (CDR), 19, 337,
 352–3; with imperfect competition,
 353–60; in trade policy analysis, 18–
 19
- sectors, economic (*see also* agricultural
 sector household sector): aggregation
 and disaggregation in CGE model,
 192–205; aggregation and
 disaggregation of, 190–1; household
 sector disaggregation, 311–20; multi-
 sector analyses, 158–82; SAM matrices,
 102, 104–6, 189–91, 220
- social accounting matrix (SAM):
 commodity and activity accounts, 99–
 101; to compile benchmark equilibrium
 dataset, 10–11, 94; construction of,
 106; definition and function, 95–106;
 environmental accounts added to,
 521–2; functional and institutional
 classifications in, 96–101; household
 disaggregation in, 307; for Indonesia–
 Japan CGE model, 529; limitations,
 110; macroeconomic, 101–3, 106–8;
 moving to CGE model from, 110–14;
 multisector, 102, 104–6; National
 Accounting Matrix including
 Environmental Accounts, 521–2; RAS
 method to update, 117–19; with
 sectoral disaggregation, 189–91; sectors
 linked to Jones Act effects, 220;
 specific aggregation for nonrubber
 footwear, 206–11; time series approach,
 17–18; trade policy applications, 109–
 14; uses for, 94–6
- Standard International Trade Classification
 (SITC), 28
- Static World Policy Simulation
 (SWOPSIM): multi-market, multi-
 region partial equilibrium model, 231,
 243; uses for, 234
- Stolper–Samuelson Theorem, 13, 301–2,
 388, 456, 458, 466
- subsidies (*see also* Trade Restrictiveness
 Index [TRI]): exports, 34, 69–70; for
 production, 43, 69
- substitutability, imperfect: Armington
 assumption of, 60; in CGE models, 61;
 in 1–2–3 model, 161–2
- substitutability, perfect: partial equilibrium
 model, 129–35
- SWOPSIM. *See* Static World Policy
 Simulation (SWOPSIM)
- tariffs (*see also* non-tariff measures
 [NTMs]): ad valorem, 30–1;
 aggregation of MFN, 270–2; analysis
 using CGE model, 198; classifications,
 28; classifications and averages, 28–30;
 differential rates, 31–2; discriminatory,
 272–4; exceptions, 32–3; optimum, 39;
 standard partial equilibrium trade
 diagram, 37–9; surcharges, 33; tariff
 bindings in GATT/WTO system, 33;
 tariff equivalent for Jones Act
 restrictions, 219–20; variable levies, 31;
 waiving or reimbursing, 32–3
- taxes: on exports, 70; on imports, 33–4;
 welfare effects of taxation, 77
- Taylor Series Approximation: welfare
 effects of single tariff change, 85–7; for
 welfare effects of world price change,
 87–9
- Theil index, 308, 314–17, 325
- time: intertemporal analyses, 389–95;
 intertemporal CGE analysis, 393–5;
 intertemporal optimization, 385; time
 series approach, 17–18
- trade: effect of introduction, 332; embodied
 effluent trade concept, 523–8
- trade coverage index, 50–1

- trade gains: in static models with imperfect competition, 365; in static models with perfect competition, 364–5
- trade measures. *See* non-tariff measures (NTMs); tariffs
- trade models: with factor market distortions, 438–44; related to world agricultural sector, 233–4
- trade policy: CGE models to analyse, 189, 198; impact on household sector, 300; procompetitive effects, 332–5; studies of dynamic effects, 365–6; studies relating income distribution and, 303–6
- trade policy analysis: comparative statics in theoretical, 6
- trade policy analysis, applied: comparative static procedure, 5–8; defined, 4; with imperfect competition, 15; requires orientation to, 4–5
- Trade Restrictiveness Index (TRI), 27, 30, 57–8
- trade theory, international: comparative static framework, 15; new, 14–15
