

Contents

| | |
|---|------------|
| Preface | vii |
| 1 Elementary examples of equilibrium states | 1 |
| 1.1 Equilibrium states in finite systems | 1 |
| 1.2 Systems on finite lattices | 7 |
| 1.3 Invariant distributions for Markov matrices | 12 |
| 1.4 Invariant measures for interval maps | 13 |
| 2 Some basic ergodic theory | 21 |
| 2.1 Birkhoff's ergodic theorem | 21 |
| 2.2 Ergodicity and mixing | 30 |
| 2.3 The ergodic decomposition | 35 |
| 2.4 Return times and return maps | 38 |
| 2.5 Factors and extensions | 40 |
| 3 Entropy | 43 |
| 3.1 Information and entropy of partitions | 43 |
| 3.2 Entropy of dynamical systems | 49 |
| 3.3 Entropy as a function of the measure | 58 |
| 4 Equilibrium states and pressure | 61 |
| 4.1 Pressure | 61 |
| 4.2 Equilibrium states and the entropy function | 66 |
| 4.3 Equilibrium states and convex geometry | 73 |
| 4.4 The variational principle | 78 |
| 4.5 Equilibrium states for expansive actions | 89 |
| 5 Gibbs measures | 95 |
| 5.1 Regular local energy functions | 95 |
| 5.2 Gibbs measures are equilibrium states | 99 |
| 5.3 Equilibrium states are Gibbs measures | 103 |
| 5.4 Markov chains | 108 |
| 5.5 Equilibrium states of the Ising model | 109 |

| | | |
|----------|---|------------|
| 5.6 | Large deviations for Gibbs measures | 115 |
| 6 | Equilibrium states and derivatives | 123 |
| 6.1 | Sinai–Bowen–Ruelle measures | 124 |
| 6.2 | Transfer operators | 130 |
| 6.3 | Absolutely continuous equilibrium states | 135 |
| 6.4 | Iterated function systems (IFS) | 145 |
| 6.5 | Pressure and dimension for IFS | 147 |
| A | Appendix | 157 |
| A.1 | Lipschitz-continuous functions | 157 |
| A.2 | Some convex analysis in \mathbb{R}^d | 157 |
| A.3 | Non-negative matrices | 158 |
| A.4 | Some facts from probability and integration | 159 |
| A.5 | Making discontinuous mappings continuous | 166 |
| | References | 169 |
| | List of special notations | 174 |
| | Index | 175 |
