Contents

Contents	v–vi
Preface	vii
Introduction	1–5
S. Akbari, G.B. Khosrovshahi, C. Maysoori, and S. Shariari <i>On maximum size anti-Pasch sets of triples</i>	7–14
A. Betten, R. Laue, and A. Wassermann <i>Some simple 7–designs</i>	15–25
A. Bonisoli and A. Cossidente <i>Inscribed bundles, Veronese surfaces and caps</i>	27–32
A.E. Brouwer, W.H. Haemers, and V.D. Tonchev <i>Embedding partial geometries in Steiner designs</i>	33–41
P.J. Cameron <i>Finite geometry after Aschbacher’s theorem: $\text{PGL}(n, q)$ from a Kleinian viewpoint</i>	43–61
A. Cossidente and G. Korchmáros <i>The Hermitian function field arising from a cyclic arc in a Galois plane</i>	63–68
P. Danziger and E. Mendelsohn <i>Intercalates everywhere</i>	69–88
D. Jungnickel and B. Schmidt <i>Difference sets: an update</i>	89–112
J.D. Key and V.D. Tonchev <i>Computational results for the known biplanes of order 9</i>	113–122

CONTENTS

C.C. Lindner	
<i>A survey of small embeddings for partial cycle systems</i>	123–147
A.C.H. Ling and C.J. Colbourn	
<i>Rosa triple systems</i>	149–159
R. Mathon	
<i>Searching for spreads and packings</i>	161–176
K. Metsch	
<i>A note on Buekenhout-Metz unitals</i>	177–180
C.M. O’Keefe and T. Penttila	
<i>Elation generalized quadrangles of order (q^2, q)</i>	181–192
A.R. Prince	
<i>Uniform parallelisms of $PG(3, 3)$</i>	193–200
R. Shaw	
<i>Double-fives and partial spreads in $PG(5, 2)$</i>	201–216
E.E. Shult	
<i>Rank three geometries with simplicial residues</i>	217–239
J.A. Thas and H. Van Maldeghem	
<i>Generalized quadrangles and the Axiom of Veblen</i>	241–253
Talks	255–256
Participants	257–258
