978-0-521-59641-1 - Geometric Galois Actions: 2. The Inverse Galois Problem, Moduli Spaces and Mapping Class Groups

Edited by Leila Schneps and Pierre Lochak

Table of Contents

[More information](#)**Table of Contents**

Introduction	vii
Abstracts	1
<b>Part I. Dessins d'enfants</b>	
Unicellular cartography and Galois orbits of plane trees N. Adrianov and G. Shabat	13
Galois groups, monodromy groups and cartographic groups G. Jones and M. Streit	25
Permutation techniques for coset representations of modular subgroups T. Hsu	67
Dessins d'enfants en genre 1 L. Zapponi	79
<b>Part II. Inverse Galois problem</b>	
The regular inverse Galois problem over large fields P. Debes and B. Deschamps	119
The symplectic braid group and Galois realizations K. Strambach and H. Völklein	139
Applying modular towers to the inverse Galois problem M. Fried and Y. Kopeliovich	151
<b>Part III. Galois actions, braids and mapping class groups</b>	
Galois group $G_{\mathbb{Q}}$ , singularity $E_7$ and moduli $M_3$ M. Matsumoto	179
Monodromy of iterated integrals and non-abelian unipotent periods Z. Wojtkowiak	219
<b>Part IV. Universal Teichmüller theory</b>	
The universal Ptolemy group and its completions R. Penner	293
Sur l'isomorphisme du groupe de Richard Thompson avec le groupe de Ptolémée M. Imbert	313
The universal Ptolemy-Teichmüller groupoid P. Lochak and L. Schneps	325
