Preface	viii
Introduction	ix
Chapter 1. Preliminaries	1
§ 1.1. Groups	1
§ 1.2. Rings and modules	13
§ 1.3. Algebraic systems, varieties and free objects	17
Exercises 1	24
Chapter 2. Automorphisms and their fixed points	26
§ 2.1. Semidirect products	26
§ 2.2. Automorphisms as linear transformations	29
§ 2.3. Induced automorphisms of factor-groups	32
Exercises 2	34
Chapter 3. Nilpotent and soluble groups	36
§ 3.1. The lower central series	36
§ 3.2. Nilpotent groups	38
§ 3.3. Soluble groups and varieties	42
§ 3.4. Nilpotency criteria for soluble groups	46
Exercises 3	48
Chapter 4. Finite p-groups	51
§ 4.1. Basic properties	51
§ 4.2. A theorem of P. Hall	54
Exercises 4	56
Chapter 5. Lie rings	57
§ 5.1. Definitions and basic properties	57
§ 5.2. Nilpotent and soluble Lie rings	62
§ 5.3. Free Lie rings	66
Exercises 5	71

Chapter 6. Associated Lie rings	74
§ 6.1. Definition	74
§ 6.2. Basic properties	77
§ 6.3. Some applications	79
Exercises 6	81
Chapter 7. Regular automorphisms of Lie rings	83
§ 7.1. Graded Lie rings	83
§ 7.2. Combinatorial consequences	88
§ 7.3. Regular automorphisms	90
Exercises 7	93
Chapter 8. Almost regular automorphism of order p: almost nilpotency of p-bounded class	95
Exercises 8	99
Chapter 9. The Baker–Hausdorff Formula and nilpotent \mathbb{Q}-powered groups	101
§ 9.1. Free nilpotent groups	101
§ 9.2. The Baker–Hausdorff Formula	104
§ 9.3. Nilpotent \mathbb{Q} -powered groups	109
Exercises 9	112
Chapter 10. The correspondences of A. I. Mal’cev and M. Lazard	113
§ 10.1. The Mal’cev Correspondence	113
§ 10.2. The Lazard Correspondence	121
Exercises 10	128
Chapter 11. Powerful p-groups	130
§ 11.1. Definitions and basic properties	130
§ 11.2. Finite p -groups of bounded rank	135
Exercises 11	138
Chapter 12. Almost regular automorphism of order p^n: almost solubility of p^n-bounded derived length ..	140
§ 12.1. Uniformly powerful case	140
§ 12.2. Application of the Mal’cev Correspondence	143
§ 12.3. Almost solubility of p^n -bounded derived length	146
Exercises 12	150

Contents

vii

Chapter 13. p-Automorphisms with p fixed points	151
§ 13.1. Abelian p -groups	152
§ 13.2. Reduction to Lie rings	155
§ 13.3. The Lie ring theorem	160
Exercises 13	165
Chapter 14. Automorphism of order p with p^m fixed points: almost nilpotency of m-bounded class	166
§ 14.1. Almost solubility of m -bounded derived length	167
§ 14.2. Almost nilpotency of m -bounded class	180
Exercises 14	189
Bibliography	190
Index of names	198
Subject Index	199
List of symbols	203
