

Index

Page numbers in **bold type** are where a key concept is defined.

- active variable 47–50
- allocative inefficiency 108, 112, 114
- Andalusian economy, employment multipliers 178–81
- average product 2
- balance of payments, general equilibrium analysis 131
- balancing
- Bartelmus, P. 142
- Base-year prices 18, 91, 153
- Baumol, W. J. 144–5
- binding inequality 7
- Bródy, A. [Bródy condition] 173–4
- capacity
 - constraints 103–7
 - density function 104
- capital and labor employment, general equilibrium analysis 129, 130
- capital stock, modeling of 9, 166, 167
 - Bródy condition 173
 - convolution product xi, 172
 - and material balance 168–9
 - measurement of depreciation 168, 172–3
 - and process output 168
- capital/labor ratio 48
- Casler, S. D. 109, 150
- chain rule 3
- c.i.f. **76, 77**
- Chakraborty, D. 30
- Chipman, J. S. 137
- circulating capital 167
- clean air, right to 141
- Coase Theorem 141
- Coasian market 141
- Cobb–Douglas production function xi, **105–7**
- Comanor, W. S. 108
- commodities, energy content of 145–6
- commodity technology coefficients **88, 89**
 - capital coefficients 97
 - different numbers of commodities and sectors 94, 95–6
 - financial balance 93
 - labor coefficients 97
 - scale invariance and material balance 95
- commodity technology model **88, 94, 97, 158, 164**
- comparative advantage estimation 126–7
 - see also* free trade
- competitive analysis, in international trade 125
 - fundamentals 125–6
 - use of production function 126
- competitive equilibrium 63
- complementary slackness **43, 44, 47, 50, 103, 104, 110, 133**
- consolidated multipliers
- constant prices 18, 161
- constrained maximization 5
 - complementary slackness conditions 7
 - first-order condition 6
 - linear programming 8
- constraints
 - dependence 39
 - in linear program 42, 45, 51–2; binding 45–8
 - see also* capacity constraints
- consumption
 - effect of income on **27–30**
 - and employment effects 31–2
 - in final demand 26
 - general equilibrium analysis 129–30
 - see also* dynamic input-output model
- contraction rate 155
- convolution product 168
 - and dynamic input-output model 171; for multi-sector economies 171–2

- cost and revenue equality 10
 cost-push analysis 25–6
 current prices 18
- Data Envelopment Analysis 154
 David, P. and productivity paradox 160
 decomposition 27, 88, 108, 109, 112, 114, 118, 124,
 150, 154, 156, 157, 158, 159, 162, 163, 164
 degenerated programs, and Lagrange multipliers 51
 demand and supply 9
 material balance 92
 simple model 56
 demand-pull analysis 26–7
 depreciation
 and capital stock 167, 168, 172–3
 and GNP 80
 diagonal elements of matrix 16
