<i>Preface</i>	xi
<i>Glossary</i>	xiii
1 Introduction	1
1.1 The definition of economics	1
1.2 Mathematical preliminaries	2
1.3 Constrained maximization	4
1.4 Linear analysis	7
1.5 Input-output analysis	11
Exercises	12
References	12
2 Input-output basics	14
2.1 Introduction	14
2.2 Price changes	17
2.3 Value relations	19
2.4 Quantity relations	22
Exercises	23
References	24
3 Multiplier effects	25
3.1 Introduction	25
3.2 Cost-push analysis	25
3.3 Demand-pull analysis	26
3.4 Consumption effects	27
3.5 Employment multipliers	30
3.6 Miyazawa inverses	34
Exercises	35
References	36

vi	Contents	
	4 Linear programming	37
	4.1 Introduction	37
	4.2 Inequality implications	37
	4.3 Dependent and independent constraints	39
	4.4 The main theorem	41
	4.5 Complementary slackness	43
	4.6 Non-degenerate programs	45
	4.7 Active variables	47
	4.8 Marginal productivity and sensitivity	50
	Exercises	52
	References	53
	5 Are input-output coefficients fixed?	54
	5.1 Introduction	54
	5.2 Techniques and the role of demand	55
	5.3 Selection of techniques	57
	5.4 The substitution theorem	60
	5.5 A postscript	63
	5.6 An application	63
	Exercises	64
	References	64
	6 The System of National Accounts	65
	6.1 Introduction	65
	6.2 A bird's eye view	65
	6.3 The System of National Accounts	67
	6.4 Enlargements	71
	6.5 Trade	72
	6.6 Value-added tax	77
	6.7 Gross national product	79
	6.8 Imputation of VAT to industries	82
	6.9 Social Accounting Matrices	83
	Exercises	84
	References	86
	7 The construction of technical coefficients	87
	7.1 Introduction	87
	7.2 Secondary products	88
	7.3 Different numbers of commodities and sectors	93
	7.4 Other inputs	96
	Exercises	98
	References	98

	Contents	vii
8 From input-output coefficients to the Cobb–Douglas function		99
8.1 Introduction		99
8.2 Derivation of the macroeconomic production function		100
8.3 Substitution		102
8.4 Returns to scale		103
Exercises		107
References		107
9 The diagnosis of inefficiency		108
9.1 Introduction		108
9.2 Inefficiency		108
9.3 Decomposition		112
9.4 Diagnosis of the Canadian economy		114
9.5 Diagnosis of the Dutch economy		121
9.6 Robustness of the efficiency measure		122
Exercises		123
References		123
10 Input-output analysis of international trade		125
10.1 Introduction		125
10.2 Partial equilibrium analysis		127
10.3 General equilibrium analysis		129
10.4 The gains to free trade		133
10.5 Distortions		136
10.6 Application		137
Exercises		138
References		138
11 Environmental input-output economics		139
11.1 Introduction		139
11.2 Standards, taxes, or rights to pollute		139
11.3 Environmental accounting		142
11.4 Energy policy		142
11.5 Pollution		146
11.6 Globalization		149
Exercises		150
References		150
12 Productivity growth and spillovers		151
12.1 Introduction		151
12.2 Total factor productivity growth		152

viii	Contents	
	12.3 Measurement and decomposition	154
	12.4 Application to the Canadian economy	159
	12.5 International spillovers	160
	12.6 Intersectoral spillovers	162
	12.7 Conclusion	164
	Exercise	164
	References	164
	13 The dynamic inverse	166
	13.1 Introduction	166
	13.2 A one-sector economy	167
	13.3 The material balance	168
	13.4 Dynamic input-output analysis of a one-sector economy	169
	13.5 Multi-sector economies	171
	13.6 Conclusion	174
	Exercise	175
	References	175
	14 Stochastic input-output analysis	176
	14.1 Introduction	176
	14.2 Stochastics	176
	14.3 Application	178
	14.4 Conclusion	181
	References	182
	<i>Solutions to exercises</i>	183
	<i>Index</i>	192
