

LONDON MATHEMATICAL SOCIETY LECTURE NOTE SERIES

Managing Editor: Professor N.J. Hitchin, Mathematical Institute,
 University of Oxford, 24–29 St Giles, Oxford OX1 3LB, United Kingdom

The titles below, and earlier volumes in the series, are available from booksellers
 or from Cambridge University Press at www.cambridge.org

- 130 Model theory and modules, M. PREST
- 131 Algebraic, extremal & metric combinatorics, M.-M. DEZA, P. FRANKL & I.G. ROSENBERG (eds)
- 141 Surveys in combinatorics 1989, J. SIEMONS (ed)
- 144 Introduction to uniform spaces, I.M. JAMES
- 146 Cohen-Macaulay modules over Cohen-Macaulay rings, Y. YOSHINO
- 148 Helices and vector bundles, A.N. RUDAKOV *et al*
- 149 Solitons, nonlinear evolution equations and inverse scattering, M. ABLowitz & P. CLARKSON
- 150 Geometry of low-dimensional manifolds 1, S. DONALDSON & C.B. THOMAS (eds)
- 151 Geometry of low-dimensional manifolds 2, S. DONALDSON & C.B. THOMAS (eds)
- 152 Oligomorphic permutation groups, P. CAMERON
- 153 L-functions and arithmetic, J. COATES & M.J. TAYLOR (eds)
- 155 Classification theories of polarized varieties, TAKAO FUJITA
- 158 Geometry of Banach spaces, P.F.X. MÜLLER & W. SCHACHERMAYER (eds)
- 159 Groups St Andrews 1989 volume 1, C.M. CAMPBELL & E.F. ROBERTSON (eds)
- 160 Groups St Andrews 1989 volume 2, C.M. CAMPBELL & E.F. ROBERTSON (eds)
- 161 Lectures on block theory, BURKHARD KÜLSHAMMER
- 163 Topics in varieties of group representations, S.M. VOVSİ
- 164 Quasi-symmetric designs, M.S. SHRIKANDÉ & S.S. SANE
- 166 Surveys in combinatorics, 1991, A.D. KEEDWELL (ed)
- 168 Representations of algebras, H. TACHIKAWA & S. BRENNER (eds)
- 169 Boolean function complexity, M.S. PATERSON (ed)
- 170 Manifolds with singularities and the Adams-Novikov spectral sequence, B. BOTVINNIK
- 171 Squares, A.R. RAJWADE
- 172 Algebraic varieties, GEORGE R. KEMPF
- 173 Discrete groups and geometry, W.J. HARVEY & C. MACLACHLAN (eds)
- 174 Lectures on mechanics, J.E. MARSDEN
- 175 Adams memorial symposium on algebraic topology 1, N. RAY & G. WALKER (eds)
- 176 Adams memorial symposium on algebraic topology 2, N. RAY & G. WALKER (eds)
- 177 Applications of categories in computer science, M. FOURMAN, P. JOHNSTONE & A. PITTS (eds)
- 178 Lower K- and L-theory, A. RANICKI
- 179 Complex projective geometry, G. ELLINGSRUD *et al*
- 180 Lectures on ergodic theory and Pesin theory on compact manifolds, M. POLLICOTT
- 181 Geometric group theory I, G.A. NIBLO & M.A. ROLLER (eds)
- 182 Geometric group theory II, G.A. NIBLO & M.A. ROLLER (eds)
- 183 Shintani zeta functions, A. YUKIE
- 184 Arithmetical functions, W. SCHWARZ & J. SPILKER
- 185 Representations of solvable groups, O. MANZ & T.R. WOLF
- 186 Complexity: knots, colourings and counting, D.J.A. WELSH
- 187 Surveys in combinatorics, 1993, K. WALKER (ed)
- 188 Local analysis for the odd order theorem, H. BENDER & G. GLAUBERMAN
- 189 Locally presentable and accessible categories, J. ADAMEK & J. ROSICKY
- 190 Polynomial invariants of finite groups, D.J. BENSON
- 191 Finite geometry and combinatorics, F. DE CLERCK *et al*
- 192 Symplectic geometry, D. SALAMON (ed)
- 194 Independent random variables and rearrangement invariant spaces, M. BRAVERMAN
- 195 Arithmetic of blowup algebras, WOLMER VASCONCELOS
- 196 Microlocal analysis for differential operators, A. GRIGIS & J. SJÖSTRAND
- 197 Two-dimensional homotopy and combinatorial group theory, C. HOG-ANGELONI *et al*
- 198 The algebraic characterization of geometric 4-manifolds, J.A. HILLMAN
- 199 Invariant potential theory in the unit ball of C^n , MANFRED STOLL
- 200 The Grothendieck theory of dessins d'enfant, L. SCHNEPS (ed)
- 201 Singularities, JEAN-PAUL BRASSELET (ed)
- 202 The technique of pseudodifferential operators, H.O. CORDES
- 203 Hochschild cohomology of von Neumann algebras, A. SINCLAIR & R. SMITH
- 204 Combinatorial and geometric group theory, A.J. DUNCAN, N.D. GILBERT & J. HOWIE (eds)
- 205 Ergodic theory and its connections with harmonic analysis, K. PETERSEN & I. SALAMA (eds)
- 207 Groups of Lie type and their geometries, W.M. KANTOR & L. DI MARTINO (eds)
- 208 Vector bundles in algebraic geometry, N.J. HITCHIN, P. NEWSTEAD & W.M. OXBURY (eds)
- 209 Arithmetic of diagonal hypersurfaces over finite fields, F.Q. GOUVÉA & N. YUI
- 210 Hilbert C^* -modules, E.C. LANCE
- 211 Groups 93 Galway / St Andrews I, C.M. CAMPBELL *et al* (eds)
- 212 Groups 93 Galway / St Andrews II, C.M. CAMPBELL *et al* (eds)
- 214 Generalised Euler-Jacobi inversion formula and asymptotics beyond all orders, V. KOWALENKO *et al*
- 215 Number theory 1992–93, S. DAVID (ed)
- 216 Stochastic partial differential equations, A. ETHERIDGE (ed)
- 217 Quadratic forms with applications to algebraic geometry and topology, A. PFISTER
- 218 Surveys in combinatorics, 1995, PETER ROWLINSON (ed)
- 220 Algebraic set theory, A. JOYAL & I. MOERDIJK
- 221 Harmonic approximation, S.J. GARDINER
- 222 Advances in linear logic, J.-Y. GIRARD, Y. LAFONT & L. REGNIER (eds)

- 223 Analytic semigroups and semilinear initial boundary value problems, KAZUAKI TAIRA
 224 Computability, enumerability, unsolvability, S.B. COOPER, T.A. SLAMAN & S.S. WAINER (eds)
 225 A mathematical introduction to string theory, S. ALBEVERIO *et al*
 226 Novikov conjectures, index theorems and rigidity I, S. FERRY, A. RANICKI & J. ROSENBERG (eds)
 227 Novikov conjectures, index theorems and rigidity II, S. FERRY, A. RANICKI & J. ROSENBERG (eds)
 228 Ergodic theory of Z^d actions, M. POLLICOTT & K. SCHMIDT (eds)
 229 Ergodicity for infinite dimensional systems, G. DA PRATO & J. ZABCZYK
 230 Prolegomena to a middlebrow arithmetic of curves of genus 2, J.W.S. CASSELS & E.V. FLYNN
 231 Semigroup theory and its applications, K.H. HOFMANN & M.W. MISLOVE (eds)
 232 The descriptive set theory of Polish group actions, H. BECKER & A.S. KECHRIS
 233 Finite fields and applications, S. COHEN & H. NIEDERREITER (eds)
 234 Introduction to subfactors, V. JONES & V.S. SUNDER
 235 Number theory 1993–94, S. DAVID (ed)
 236 The James forest, H. FETTER & B. GAMBOA DE BUEN
 237 Sieve methods, exponential sums, and their applications in number theory, G.R.H. GREAVES *et al*
 238 Representation theory and algebraic geometry, A. MARTSINKOVSKY & G. TODOROV (eds)
 240 Stable groups, FRANK O. WAGNER
 241 Surveys in combinatorics, 1997, R.A. BAILEY (ed)
 242 Geometric Galois actions I, L. SCHNEPS & P. LOCHAK (eds)
 243 Geometric Galois actions II, L. SCHNEPS & P. LOCHAK (eds)
 244 Model theory of groups and automorphism groups, D. EVANS (ed)
 245 Geometry, combinatorial designs and related structures, J.W.P. HIRSCHFELD *et al*
 246 p -Automorphisms of finite p -groups, E.I. KHUKHRO
 247 Analytic number theory, Y. MOTOHASHI (ed)
 248 Tame topology and o -minimal structures, LOU VAN DEN DRIES
 249 The atlas of finite groups: ten years on, ROBERT CURTIS & ROBERT WILSON (eds)
 250 Characters and blocks of finite groups, G. NAVARRO
 251 Gröbner bases and applications, B. BUCHBERGER & F. WINKLER (eds)
 252 Geometry and cohomology in group theory, P. KROPHOLLER, G. NIBLO & R. STÖHR (eds)
 253 The q -Schur algebra, S. DONKIN
 254 Galois representations in arithmetic algebraic geometry, A.J. SCHOLL & R.L. TAYLOR (eds)
 255 Symmetries and integrability of difference equations, P.A. CLARKSON & F.W. NIJHOFF (eds)
 256 Aspects of Galois theory, HELMUT VÖLKLEIN *et al*
 257 An introduction to noncommutative differential geometry and its physical applications 2ed, J. MADORE
 258 Sets and proofs, S.B. COOPER & J. TRUSS (eds)
 259 Models and computability, S.B. COOPER & J. TRUSS (eds)
 260 Groups St Andrews 1997 in Bath, I, C.M. CAMPBELL *et al*
 261 Groups St Andrews 1997 in Bath, II, C.M. CAMPBELL *et al*
 262 Analysis and logic, C.W. HENSON, J. IOVINO, A.S. KECHRIS & E. ODELL
 263 Singularity theory, BILL BRUCE & DAVID MOND (eds)
 264 New trends in algebraic geometry, K. HULEK, F. CATANESE, C. PETERS & M. REID (eds)
 265 Elliptic curves in cryptography, I. BLAKE, G. SEROUSSI & N. SMART
 267 Surveys in combinatorics, 1999, J.D. LAMB & D.A. PREECE (eds)
 268 Spectral asymptotics in the semi-classical limit, M. DIMASSI & J. SJÖSTRAND
 269 Ergodic theory and topological dynamics, M.B. BEKKA & M. MAYER
 270 Analysis on Lie groups, N.T. VAROPOULOS & S. MUSTAPHA
 271 Singular perturbations of differential operators, S. ALBEVERIO & P. KURASOV
 272 Character theory for the odd order theorem, T. PETERFALVI
 273 Spectral theory and geometry, E.B. DAVIES & Y. SAFAROV (eds)
 274 The Mandelbrot set, theme and variations, TAN LEI (ed)
 275 Descriptive set theory and dynamical systems, M. FOREMAN *et al*
 276 Singularities of plane curves, E. CASAS-ALVERO
 277 Computational and geometric aspects of modern algebra, M.D. ATKINSON *et al*
 278 Global attractors in abstract parabolic problems, J.W. CHOLEWA & T. DLOTKO
 279 Topics in symbolic dynamics and applications, F. BLANCHARD, A. MAASS & A. NOGUEIRA (eds)
 280 Characters and automorphism groups of compact Riemann surfaces, THOMAS BREUER
 281 Explicit birational geometry of 3-folds, ALESSIO CORTI & MILES REID (eds)
 282 Auslander-Buchweitz approximations of equivariant modules, M. HASHIMOTO
 283 Nonlinear elasticity, Y. FU & R.W. OGDEN (eds)
 284 Foundations of computational mathematics, R. DEVORE, A. ISERLES & E. SÜLI (eds)
 285 Rational points on curves over finite fields, H. NIEDERREITER & C. XING
 286 Clifford algebras and spinors 2ed, P. LOUNESTO
 287 Topics on Riemann surfaces and Fuchsian groups, E. BUJALANCE *et al*
 288 Surveys in combinatorics, 2001, J. HIRSCHFELD (ed)
 289 Aspects of Sobolev-type inequalities, L. SALOFF-COSTE
 290 Quantum groups and Lie theory, A. PRESSLEY (ed)
 291 Tits buildings and the model theory of groups, K. TENT (ed)
 292 A quantum groups primer, S. MAJID
 293 Second order partial differential equations in Hilbert spaces, G. DA PRATO & J. ZABCZYK
 294 Introduction to the theory of operator spaces, G. PISIER
 295 Geometry and integrability, L. MASON & Y. NUTKU (eds)
 296 Lectures on invariant theory, IGOR DOLGACHEV
 297 The homotopy category of simply connected 4-manifolds, H.-J. BAUES
 299 Kleinian groups and hyperbolic 3-manifolds, Y. KOMORI, V. MARKOVIC, C. SERIES (eds)
 300 Introduction to Möbius differential geometry, UDO HERTRICH-JEROMIN
 301 Stable modules and the $D(2)$ -problem, F.E.A. JOHNSON
 302 Discrete and continuous nonlinear Schrödinger systems, M. J. ABLOWITZ, B. PRINARI, A. D. TRUBATCH
 303 Number theory and algebraic geometry, M. REID & A. SKOROBOGATOV (eds)

Contents

Preface	p. 3
The development of structured ring spectra <i>Anthony Elmendorf</i>	p. 7
Compromises forced by Lewis's theorem <i>Anthony Elmendorf</i>	p. 15
Permutative categories as a model of connective stable homotopy <i>Anthony Elmendorf and Michael Mandell</i>	p. 19
Morita theory in abelian, derived and stable model categories <i>Stefan Schwede</i>	p. 33
Higher coherences in equivariant K -theory <i>Michael Joachim</i>	p. 87
(Co-)Homology theories for commutative (S -)algebras <i>Maria Basterra and Birgit Richter</i>	p. 115
Classical obstructions and S -algebras <i>Alan Robinson</i>	p. 133
Moduli spaces of commutative ring spectra <i>Paul Goerss and Michael Hopkins</i>	p. 151
Cohomology theories for highly structured ring spectra <i>Andrey Lazarev</i>	p. 201
Index	p. 233

Preface

This book arose out of the *Workshop on structured ring spectra and their applications* held in Glasgow in January 2002. Although it is not intended to be a proceedings of this conference, nevertheless the articles reflect the subject matter of the conference and the papers of Elmendorf, Robinson and Schwede have their origins in series of overview talks which these authors gave in Glasgow. All the papers published here have been refereed.

We would like to thank the London Mathematical Society, Edinburgh Mathematical Society and Glasgow Mathematical Journal Trust Fund for their financial support for the Workshop.

Since the middle of the 1990's there has been a renewed interest in structured ring spectra and several new models for the homotopy category of spectra of Boardman or Adams have been constructed, for example the category of S -modules constructed by Elmendorf, Kriz, Mandell and May [8], the category of symmetric spectra of Hovey, Shipley and Smith [11], the category of Γ -spaces constructed by Lydakis [13], the category of orthogonal spectra defined in [15] and [16], and many more. All of these categories possess a smash product which is strictly associative, commutative and unital, and therefore it makes sense to talk about monoids and commutative monoids, i.e., associative and commutative ring spectra.

Before these constructions have been found, one merely had a smash product of spectra which fulfilled associativity, commutativity only up to homotopy and therefore multiplicative structures on spectra were always given up to homotopy as well. Nevertheless, the techniques of Boardman and Vogt [4] and May, Quinn, Ray and Tornehave [14] allowed for various stricter notions of stricter ring structures, namely ring spectra which are homotopy associative (resp. commutative) up to higher coherences, the so-called A_∞ (resp. E_∞) ring spectra. The coherences were encoded via *operads* in the May approach and via *categories of operators in standard form* in the work of Boardman and Vogt.

With the help of these methods it was possible to identify important spectra as E_∞ ring spectra. For instance, the complex cobordism spectrum MU and other bordism spectra are E_∞ spectra [14, IV §2], as are real and complex connective K -theory ko and ku [14, VIII §2]. But for instance, it is currently unknown whether the Brown-Peterson spectrum BP at a prime possesses an E_∞ structure.

The development of a strict smash product allows additional methods for proving that certain spectra have multiplicative structures and all examples of A_∞ and E_∞ spectra get a strict model by the comparison results of [8, II 4.5, II 4.6]. But many new examples can be gained by working in these strict monoidal categories. For instance, as Bousfield localizations preserve algebra structures on spectra [8, VIII 2.2], the commutative structures on ko

and ku can be used to prove that real and complex K -theory, KO and KU are commutative S -algebras [8, VIII 4.3].

In addition to the construction of algebra spectra as above there are other approaches to imposing associative or commutative algebra structures on a given spectrum: There are several obstruction theories where certain obstruction groups are identified whose vanishing implies the existence of an associative or commutative multiplication on a spectrum. The earliest work in this direction is contained in the paper by Alan Robinson [18] from 1989, which developed an obstruction theory for the detection of A_∞ spectra and applied it to prove that the Morava K -theories $K(n)$ at odd primes have uncountable many A_∞ -structures. Later in [1] this method was used to show that completed versions of the Johnson-Wilson spectra possess A_∞ structures. Other obstruction theories for associative algebra structures are contained in the work of Hopkins and Miller [17], Goerss [9] and Lazarev [12].

Later obstruction theories for commutative structures were developed by Basterra [2], Goerss and Hopkins [10], and Robinson [19]. A common feature of all of these obstruction theories is the fact that the obstruction groups live in some generalized versions of André-Quillen cohomology. There will be a short overview about the different types of these cohomology theories for commutative algebras and comparison results between them in [3].

For example the Hopkins-Miller approach led to an A_∞ structure on each Lubin Tate spectrum E_n ; the work of Goerss-Hopkins (compare the paper “Moduli Spaces of Commutative Ring Spectra” [10] in this volume) shows that this structure can be refined to an E_∞ multiplication.

The papers in this book deal with two different general topics. On the one hand the papers by Elmendorf, Schwede, and Joachim deal with foundational matters and with the construction of E_∞ structures.

- Tony Elmendorf’s article “The development of structured ring spectra” [5] gives background material to the evolution of the symmetric monoidal category of spectra of S -modules of [8]. His second paper “Compromises forced by Lewis’s theorem” [6] describes problems one necessarily meets when constructing such a symmetric monoidal category which models the stable homotopy category. There is a list of natural properties such a category might reasonably be required to have and Lewis’s theorem shows that these are inconsistent. The third paper [7] in this series represents joint work of Tony Elmendorf and Mike Mandell. That paper sketches how one might use permutative categories to model connective spectra. They construct a symmetric monoidal product on permutative categories and give evidence why this should model the smash-product of spectra. A by-product is a short proof for the fact that bipermutative categories give rise to commutative spectra by forming the associated K -theory spectrum.

- Stefan Schwede’s paper “Morita theory in abelian, derived and stable model categories” discusses an enlarged version of Morita equivalence. The subject of the paper [21] is to transfer the well-known notion for Morita equivalence of rings to the derived category of a ring and further to modules over a ring spectrum.
- In “Higher coherences for equivariant K -theory” Michael Joachim gives an E_∞ model for G -equivariant K -theory, for G a compact Lie group and he proves that the G -equivariant analog of the Atiyah-Bott-Shapiro orientation from Spin^c -bordism to K -theory has an E_∞ -model as well.

The second part of this book is concerned with obstruction theories for algebra structures on spectra.

- We start with a survey called “(Co-)Homology theories for commutative (S -)algebras” where we describe some of the cohomology theories for commutative algebras and discuss some comparison results for these.
- Alan Robinson gives an overview over his obstruction theories for A_∞ and E_∞ structures on spectra in his paper “Classical obstructions and S -algebras”. Besides this he proves, that there are no obstructions to upgrading a homotopy unit to a strict unit for an A_∞ (resp. E_∞) spectrum.
- The paper by Paul Goerss and Mike Hopkins “Moduli spaces of commutative ring spectra” is a summary of the obstruction theory using methods of Dwyer, Kan and Stover; in particular it discusses the example of the Lubin-Tate spectra.
- Andrey Lazarev’s paper “Cohomology theories for highly structured ring spectra” describes the approach to obstruction theory using topological André-Quillen homology, which was defined by Basterra, and its counterpart in the theory for associative algebra structures, called *topological derivations*.
