| PREFACE | v |
| | |
| CHAP. | |
| I. FORMAL PRELIMINARIES | |
| § 1. The summation convention | 1 |
| §§ 2, 3. The Kronecker deltas | 3 |
| § 4. Linear equations | 6 |
| §§ 5, 6. Functional determinants | 7 |
| § 7. Derivative of a determinant | 8 |
| § 8. Numerical relations | 8 |
| §§ 9, 10. Minors, cofactors, and the Laplace expansion | 9 |
| § 11. Historical | 11 |
| | |
| II. DIFFERENTIAL INVARIANTS | |
| § 1. N -dimensional space | 13 |
| § 2. Transformations of coordinates | 13 |
| § 3. Invariants | 14 |
| § 4. Differential invariants | 15 |
| §§ 5, 6. Differentials and contravariant vectors | 16 |
| § 7. A general class of invariants | 19 |
| § 8. Tensors | 19 |
| § 9. Relative scalars | 20 |
| § 10. Covariant vectors | 21 |
| §§ 11, 12. Algebraic combinations of tensors | 22 |
| § 13. The commonness of tensors | 24 |
| § 14. Numerical tensors | 25 |
| § 15. Combinations of vectors | 26 |
| § 16. Historical and general remarks | 27 |
| | |
| III. QUADRATIC DIFFERENTIAL FORMS | |
| § 1. Differential forms | 30 |
| § 2. Linear differential forms | 30 |
| §§ 3, 4. Quadratic differential forms | 31 |
| § 5. Invariants derived from basic invariants | 32 |
| §§ 6, 7. Invariants of a quadratic differential form | 32 |
| §§ 8, 9. The fundamental affine connection | 33 |
| § 10. Affine connections in general | 35 |
| §§ 11, 12. Covariant differentiation | 36 |
| § 13. Geodesic coordinates | 38 |
| §§ 14, 15. Formulas of covariant differentiation | 39 |
| §§ 16, 17. The curvature tensor | 41 |
| §§ 18, 19. Riemann-Christoffel tensor | 43 |
| § 20. Reduction theorems | 44 |
| § 21. Historical remarks | 47 |
| § 22. Scalar invariants | 48 |

| CHAP. | | PAGE |
|-------|---|------|
| IV. | EUCLIDEAN GEOMETRY | |
| | §§ 1, 2. Euclidean geometry | 50 |
| | § 3. Euclidean affine geometry | 53 |
| | §§ 4, 5. Euclidean vector analysis | 55 |
| | § 6. Associated vectors and tensors | 56 |
| | § 7. Distance and scalar product | 57 |
| | §§ 8, 9. Area | 59 |
| | § 10. First order differential parameters | 60 |
| | § 11. Euclidean covariant differentiation | 61 |
| | § 12. The divergence | 62 |
| | § 13. The Laplacian or Lamé differential parameter of the second order | 63 |
| | § 14. The curl of a vector | 64 |
| | §§ 15, 16. Generalized divergence and curl | 64 |
| | § 17. Historical remarks | 66 |
| V. | THE EQUIVALENCE PROBLEM | |
| | § 1. Riemannian geometry | 67 |
| | § 2. The theory of surfaces | 68 |
| | § 3. Spaces immersed in a Euclidean space | 69 |
| | §§ 4, 5. Condition that a Riemannian space be Euclidean | 69 |
| | § 6. The equivalence problem | 72 |
| | § 7. A lemma on mixed systems | 73 |
| | § 8. Equivalence theorem for quadratic differential forms | 76 |
| | § 9. Equivalence of affine connections | 77 |
| | §§ 10, 11. Automorphisms of a quadratic differential form | 78 |
| | § 12. Equivalence theorem in terms of scalars | 79 |
| | § 13. Historical remarks | 80 |
| VI. | NORMAL COORDINATES | |
| | §§ 1, 2. Affine geometry of paths | 82 |
| | §§ 3, 4. Affine normal coordinates | 85 |
| | § 5. Affine extensions | 87 |
| | § 6. The affine normal tensors | 89 |
| | §§ 7, 8. The replacement theorems | 90 |
| | §§ 9, 10, 11, 12. The curvature tensor and the normal tensors | 91 |
| | §§ 13, 14, 15, 16, 17. Affine extensions of the fundamental tensor | 94 |
| | § 18. Historical and general remarks | 100 |
| | § 19. Formulas for the extensions of tensors | 102 |
