

## CONTENTS

<i>Preface</i>	<i>page</i>	<i>ix</i>
1 Introduction		1
1 Introduction		1
2 Illustrative examples		2
3 Stochastic approximations		2
4 Up-and-down method		3
5 Newton–Raphson method		4
6 Applications		5
7 Summary		5
2 The Robbins–Monro method		8
1 Introduction		8
2 Response–no-response analysis		8
3 One-dimensional stochastic approximation		13
4 Approximation for asymptotically regular process		19
5 Small sample theory		27
6 Various modifications of the Robbins–Monro method		28
7 Problems		29
3 The Kiefer–Wolfowitz method		36
1 Introduction		36
2 Stochastic approximation to locate maximum of regression function		36
3 Optimum choice of $\{a_n\}$ and $\{c_n\}$		40

vi	CONTENTS	
4	Class of stochastic-approximation processes	<i>page</i> 47
5	Illustrative example	50
6	Problems	53
4	Applications	57
1	Introduction	57
2	Adaptive control processes	57
3	Two regression functions for a kinetic model	63
4	Application of stochastic approximation to a problem of reliability	67
5	Quantal response estimation	72
5	Multivariate stochastic-approximation methods	76
1	Introduction	76
2	Multivariate Robbins–Monro method	76
3	Application to a problem of pharmacology	80
4	Multivariate Kiefer–Wolfowitz method	88
5	Problems	91
6	Asymptotic normality	95
1	Introduction	95
2	Method of moments	95
3	Method of characteristic function	101
4	Applications	110
5	Problems	112
7	The approximation for continuous random processes	117
1	Introduction	117
2	A continuous version of stochastic approximation	117

CONTENTS		vii
3	A Kiefer–Wolfowitz procedure for continuous random processes	<i>page</i> 125
4	An application to filter problem	131
5	Problems	132
8	Up-and-down method	135
1	Introduction	135
2	Up-and-down method	135
3	Application to ‘Rankits’	139
4	Small sample up-and-down method	142
5	Non-Parametric up-and-down method	143
6	Illustrative example	147
7	Problems	149
<i>Appendix 1</i> Iterative techniques of numerical analysis		150
1	Introduction	150
2	Pre-Newton–Raphson method	150
3	Newton–Raphson method	151
4	A fixed-point problem	152
<i>Appendix 2</i> Limit theorems		155
1	Introduction	155
2	Convergence of sequence of random variables	155
3	Multidimensional characteristic functions	164
4	Some theorems on conditional expectation	167
5	Problems	173
<i>Appendix 3</i> Inequalities		175
1	Introduction	175

viii	CONTENTS	
2	Inequalities developed for stochastic approximation	<i>page</i> 175
3	Other inequalities	191
4	Problems	193
	<i>Bibliography</i>	195
	<i>Index</i>	201
