<i>Foreword by Jeffery Burley</i>	xv
<i>Preface</i>	xix
<i>Explanatory note</i>	xxii
<b>1 The issues</b>	1
Introduction	1
The importance of the tropical timber trade	1
The regional status of tropical forests	2
Problems facing tropical forest management	5
Insufficient reinvestment in the resource	6
Inadequate infrastructures	6
Forest invasion	7
Inefficient species utilization	8
Timber pricing systems	8
Political instability	10
Problems facing tropical forest preservation	10
Forest and biodiversity conservation: the rationale for an integrated approach	11
The concept of sustainable management	13
Summary	16
<b>2 The history and development of tropical forestry</b>	17
Historical background	17
The pre-colonial era	17
The colonial and post-colonial eras	18
Tropical forestry practices	19
Non-timber harvesting	20

<i>Contents</i>	
Non-intensive timber harvesting	21
Intensive timber harvesting	22
Forest management systems	23
Replacement systems	24
Clearing systems	25
Natural regeneration systems	25
Restoration systems	26
Summary	26
<b>3 Changes in the physical environment</b>	27
Introduction	27
Microclimate	28
Types of microclimatic change	28
Cloud forest	29
Some direct effects of microclimatic change	30
Soil, water and nutrients	31
Soil damage and loss	31
Water flow and sediment yield	33
Nutrients	34
Some direct effects of soil damage and loss of water quality	36
The special case of periodically inundated forests	37
Mangrove forest	37
Várzea	38
Some wider implications of environmental change	39
Climatic shifts	39
Susceptibility to burning	41
Summary	41
<b>4 Forest regeneration and gap dynamics</b>	43
Introduction	43
Damage levels	44
Changes in forest structure	45
Changes in forest composition	48
Community level changes	48
Changes in species composition	49
Tree regeneration and gap dynamics	51
Gap dynamics	51
Gap size	51
Gap frequency	53

<i>Contents</i>	xi
Timing of gap formation	53
Tree phenology	53
Management to promote timber tree regeneration	55
Summary	57
<b>5 Responses of individual animal species</b>	58
Introduction	58
Limitations of the data	59
Folivores	59
Invertebrates	59
Smaller vertebrates	61
Large terrestrial browsers	63
Exudate specialists	63
Pygmy marmosets	65
Frugivores and seed predators	66
Uakaris and bearded sakis	67
Other frugivorous primates	68
Squirrels	70
Frugivorous bats	70
Hornbills	72
Other frugivorous birds	74
Nectarivores	76
Social organization in hummingbirds	77
Frugivore-folivores	79
Primates	79
Giant flying squirrels	85
Ungulates	85
Rodents	86
Insectivores	87
Understorey birds	87
Canopy birds	92
Commensal insectivores	92
Bats	94
Insectivore-frugivores	94
Primates	95
Transient understorey birds	97
Predators	97
Civets	99
Decomposers	101
Summary	102

<b>6 Responses of species assemblages</b>	103
Introduction	103
Changes within species assemblages	104
Litter invertebrates	104
Birds	106
Mammals	107
Attributes of species assemblages	112
Describing changes within assemblages	112
Species richness and diversity indices	113
Indices of similarity	118
Indicator species	120
Indicators of logging impacts	120
Flagship species as indicator species	122
Summary	122
<b>7 Using ecological data in forest management planning</b>	124
Introduction	124
The problem of spatial heterogeneity	125
Structural variation	125
Variation in species composition	125
Inter-site comparisons: information content	127
Species assemblages	128
Guilds	129
Individual species abundances	131
Applying local data to a wider forest estate	131
Making management recommendations	132
Management to retain biodiversity	133
Management for sustainability	133
Summary	136
<b>8 Intervention to maintain biodiversity</b>	137
The role of interventions	137
Habitat preservation	138
Refuges	139
Corridors	145
Corridors as habitat	145
Corridors as dispersal routes	147
An example of the importance of habitat preservation	148
Conservation of specific resources	149

<i>Contents</i>	xiii
Keystone food trees	149
Standing and fallen deadwood	153
Tree cavities	154
Cavities as limiting factors	155
Primary hole nesters	156
Creating or retaining cavities	156
Enrichment planting	157
Re-logging schedules	158
Compensatory plantations	159
Plantations as a means of reducing deforestation	160
Plantations as substitute timber sources	160
Plantations as buffer zones	161
Reducing edge effects	161
Provision of additional habitat	162
Summary	163
<b>9 Field procedures</b>	165
Damage limitation	165
Guidelines for conserving biological diversity	166
Pre-felling procedures	167
Silvicultural enumeration	168
Topographic survey	168
Harvesting inventory	169
Climber cutting	171
Harvesting procedures	172
Roading	172
Felling	172
Extraction	175
Post-felling procedures	176
Clean-up procedures	176
Water run-off control	176
Post-felling stand inventory	177
Post-felling biodiversity inventory	177
Rules and regulations	178
Examples of current 'best practice' management systems	179
Summary	181
<b>10 The future</b>	182
Integrated management of tropical forests	182

xiv

*Contents*

Management priorities	182
Management for biodiversity	183
Species extinctions	185
A conservation ethos	187
Summary	188
<i>References</i>	190
<i>Subject index</i>	210
