

## Contents

*Foreword to the first edition* ix  
*Preface* xi  
*Acknowledgments* xiv

### Part I Getting to know the sky

- 1 Beginning with the Big Dipper 3
- 2 Magnitude, color, and distance 10
- 3 A word on binoculars and telescopes 13
- 4 Learning to see 20

### Part II Getting to know the variables

- 5 Meeting the family 25
- 6 Getting started with Cepheids 30
- 7 Algol, the demon of autumn 35
- 8 How to estimate a variable 39
- 9 Names and records 44
- 10 How your observations help us understand a variable star 49
- 11 Observing hints 52
- 12 Observing with CCDs 59
- 13 Stately and wonderful 68
- 14 Stars of challenge 77
- 15 Bright, easy, and interesting 83
- 16 Betelgeuse: easy and hard 88
- 17 Not too regular 93
- 18 Nova? What nova? 97
- 19 Supernovae 104

viii Contents

20	Clyde Tombaugh's star and the family of cataclysmic variables	112
21	A nova in reverse?	126
22	RU Lupi?	131
23	Orion, the star factory	135
24	Other variable things	144
25	The Sun	149
<b>Part III Suggested variables for observation throughout the year</b>		
26	Introduction	157
27	January, February, March	159
28	April, May, June	176
29	July, August, September	194
30	October, November, December	213
31	Southern sky notes	229
<b>Part IV A miscellany</b>		
32	Stars and people	237
33	"Hands-on Astrophysics" and the next generation	244
34	Going further	249
35	Glossary and abbreviations	252
