

Contents

<i>Preface</i>	xiii
1 Statistical thermodynamic foundations	1
1.1 Postulates and basic ensembles	1
1.2 The generalized ensemble	18
1.3 The laws of thermodynamics	26
1.4 Fluctuations	34
1.5 Simple models for energy transition	37
1.6 Simple models for binding	41
2 Global binding processes	47
2.1 The reference system	47
2.2 Cooperative binding	57
2.3 Properties of the binding curve	68
2.4 Properties of the binding capacity	76
2.5 Linkage effects: The reference cycle	88
2.6 Linkage effects: General treatment involving two ligands	99
3 Local binding processes	108
3.1 The reference cycle and site-specific cooperativity	108
3.2 Contracted partition functions	123
3.3 Thermodynamic basis of site-specific effects	139
3.4 Properties of the binding curve in the local description	146
3.5 Properties of the binding capacity in the local description	152
4 Specific cases and applications	158
4.1 The case $N = 2$	158
4.2 The case $N = 3$	169

xii	<i>Contents</i>	
4.3	The case $N = 4$	182
4.4	Site-specific properties of hemoglobin	190
4.5	Site-specific binding curves from global properties of structurally perturbed systems	214
4.6	Pairwise coupling	230
5	Site-specific effects in Ising networks	245
5.1	Transition modes	246
5.2	A combinatorial model for molecular recognition	258
5.3	Site-specific effects in Ising networks	265
5.4	The probe theorem	279
	<i>References</i>	285
	<i>Index</i>	292
