Contents

	<i>Series editor's preface</i>	<i>page</i> ix
	<i>Volume editors' preface</i>	xiii
	<i>Editors</i>	xxi
	<i>List of contributors</i>	xxv
I	Philosophical and methodological implications of complexity and evolution in economic systems	
1	Toward a generalized Coase theorem: a theory of the emergence of social and institutional structures under imperfect information <i>Bertin Martens</i>	3
2	Universal Darwinism and social research: the case of economics <i>John Nightingale</i>	21
3	Uncertainty, risk, and chaos <i>James Juniper</i>	37
4	The role of innovation in economics <i>Russell K. Standish</i>	61
II	Finance and the macroeconomy	
5	The nonlinear economics of debt deflation <i>Steve Keen</i>	83
6	The emergence of complex dynamics in a “naturally” nonlinear integrated Keynesian model of monetary growth <i>Carl Chiarella and Peter Flaschel</i>	111
7	Stochastic volatility in interest rates and complex dynamics in velocity <i>William A. Barnett and Haiyang Xu</i>	147
	vii

Table of Contents

[More information](#)

viii	Contents	
8	A genetic-programming-based approach to the generation of foreign-exchange trading models <i>Andrew Colin</i>	173
9	Hybrid option pricing with an optimal weighted implied standard deviation <i>Paul Lajbcygier, Andrew Flitman, and Marimuthu Palaniswami</i>	191
III	Market and sectoral dynamics	
10	Evolutionary patterns of multisectoral growth dynamics <i>Hermann Schnabl</i>	215
11	The detection of evolutionary change in nonlinear economic processes: a new statistical methodology <i>John Foster and Phillip Wild</i>	233
12	Ergodic chaos in a piecewise linear cobweb model <i>Akio Matsumoto</i>	253
13	The cobweb model and a modified genetic algorithm <i>Janice Gaffney, Krystyna Parrott, Charles Pearce, and Franz Salzborn</i>	267
14	The convergence of genetic learning algorithms, with particular reference to recent cobweb models <i>C. E. M. Pearce</i>	277
IV	Marketing and interdependent behavior	
15	A complex-systems simulation approach to evaluating plan-based and reactive trading strategies <i>Robert B. Johnston and John M. Betts</i>	291
16	Genetic algorithms and evolutionary games <i>Xin Yao and Paul Darwen</i>	313
17	Evolved perception and the validation of simulation models <i>Robert Marks</i>	335
18	The application of cellular-automata and agent models to network externalities in consumers' theory: a generalization-of-life game <i>Sobei H. Oda, Ken Miura, Kanji Ueda, and Yasunori Baba</i>	351
19	Engendering change <i>Joshua S. Gans</i>	373
