Preface	<i>page</i> xiii
<b>1 The Gamma and Beta Functions</b>	<b>1</b>
1.1 The Gamma and Beta Integrals and Functions	2
1.2 The Euler Reflection Formula	9
1.3 The Hurwitz and Riemann Zeta Functions	15
1.4 Stirling's Asymptotic Formula	18
1.5 Gauss's Multiplication Formula for $\Gamma(mx)$	22
1.6 Integral Representations for $\text{Log } \Gamma(x)$ and $\psi(x)$	26
1.7 Kummer's Fourier Expansion of $\text{Log } \Gamma(x)$	29
1.8 Integrals of Dirichlet and Volumes of Ellipsoids	32
1.9 The Bohr–Mollerup Theorem	34
1.10 Gauss and Jacobi Sums	36
1.11 A Probabilistic Evaluation of the Beta Function	43
1.12 The $p$ -adic Gamma Function	44
Exercises	46
<b>2 The Hypergeometric Functions</b>	<b>61</b>
2.1 The Hypergeometric Series	61
2.2 Euler's Integral Representation	65
2.3 The Hypergeometric Equation	73
2.4 The Barnes Integral for the Hypergeometric Function	85
2.5 Contiguous Relations	94
2.6 Dilogarithms	102
2.7 Binomial Sums	107
2.8 Dougall's Bilateral Sum	109
2.9 Fractional Integration by Parts and Hypergeometric Integrals	111
Exercises	114

<b>3</b>	<b>Hypergeometric Transformations and Identities</b>	<b>124</b>
3.1	Quadratic Transformations	125
3.2	The Arithmetic-Geometric Mean and Elliptic Integrals	132
3.3	Transformations of Balanced Series	140
3.4	Whipple's Transformation	143
3.5	Dougall's Formula and Hypergeometric Identities	147
3.6	Integral Analogs of Hypergeometric Sums	150
3.7	Contiguous Relations	154
3.8	The Wilson Polynomials	157
3.9	Quadratic Transformations – Riemann's View	160
3.10	Indefinite Hypergeometric Summation	163
3.11	The W–Z Method	166
3.12	Contiguous Relations and Summation Methods	174
	Exercises	176
<b>4</b>	<b>Bessel Functions and Confluent Hypergeometric Functions</b>	<b>187</b>
4.1	The Confluent Hypergeometric Equation	188
4.2	Barnes's Integral for ${}_1F_1$	192
4.3	Whittaker Functions	195
4.4	Examples of ${}_1F_1$ and Whittaker Functions	196
4.5	Bessel's Equation and Bessel Functions	199
4.6	Recurrence Relations	202
4.7	Integral Representations of Bessel Functions	203
4.8	Asymptotic Expansions	209
4.9	Fourier Transforms and Bessel Functions	210
4.10	Addition Theorems	213
4.11	Integrals of Bessel Functions	216
4.12	The Modified Bessel Functions	222
4.13	Nicholson's Integral	223
4.14	Zeros of Bessel Functions	225
4.15	Monotonicity Properties of Bessel Functions	229
4.16	Zero-Free Regions for ${}_1F_1$ Functions	231
	Exercises	234
<b>5</b>	<b>Orthogonal Polynomials</b>	<b>240</b>
5.1	Chebyshev Polynomials	240
5.2	Recurrence	244
5.3	Gauss Quadrature	248
5.4	Zeros of Orthogonal Polynomials	253
5.5	Continued Fractions	256

	Contents	ix
5.6	Kernel Polynomials	259
5.7	Parseval's Formula	263
5.8	The Moment-Generating Function	266
	Exercises	269
<b>6</b>	<b>Special Orthogonal Polynomials</b>	<b>277</b>
6.1	Hermite Polynomials	278
6.2	Laguerre Polynomials	282
6.3	Jacobi Polynomials and Gram Determinants	293
6.4	Generating Functions for Jacobi Polynomials	297
6.5	Completeness of Orthogonal Polynomials	306
6.6	Asymptotic Behavior of $P_n^{(\alpha, \beta)}(x)$ for Large $n$	310
6.7	Integral Representations of Jacobi Polynomials	313
6.8	Linearization of Products of Orthogonal Polynomials	316
6.9	Matching Polynomials	323
6.10	The Hypergeometric Orthogonal Polynomials	330
6.11	An Extension of the Ultraspherical Polynomials	334
	Exercises	339
<b>7</b>	<b>Topics in Orthogonal Polynomials</b>	<b>355</b>
7.1	Connection Coefficients	356
7.2	Rational Functions with Positive Power Series Coefficients	363
7.3	Positive Polynomial Sums from Quadrature and Vietoris's Inequality	371
7.4	Positive Polynomial Sums and the Bieberback Conjecture	381
7.5	A Theorem of Turán	384
7.6	Positive Summability of Ultraspherical Polynomials	388
7.7	The Irrationality of $\zeta(3)$	391
	Exercises	395
<b>8</b>	<b>The Selberg Integral and Its Applications</b>	<b>401</b>
8.1	Selberg's and Aomoto's Integrals	402
8.2	Aomoto's Proof of Selberg's Formula	402
8.3	Extensions of Aomoto's Integral Formula	407
8.4	Anderson's Proof of Selberg's Formula	411
8.5	A Problem of Stieltjes and the Discriminant of a Jacobi Polynomial	415
8.6	Siegel's Inequality	419
8.7	The Stieltjes Problem on the Unit Circle	425
8.8	Constant-Term Identities	426
8.9	Nearly Poised ${}_3F_2$ Identities	428
8.10	The Hasse-Davenport Relation	430

x	Contents	
	8.11 A Finite-Field Analog of Selberg's Integral	434
	Exercises	439
<b>9</b>	<b>Spherical Harmonics</b>	<b>445</b>
	9.1 Harmonic Polynomials	445
	9.2 The Laplace Equation in Three Dimensions	447
	9.3 Dimension of the Space of Harmonic Polynomials of Degree $k$	449
	9.4 Orthogonality of Harmonic Polynomials	451
	9.5 Action of an Orthogonal Matrix	452
	9.6 The Addition Theorem	454
	9.7 The Funk–Hecke Formula	458
	9.8 The Addition Theorem for Ultraspherical Polynomials	459
	9.9 The Poisson Kernel and Dirichlet Problem	463
	9.10 Fourier Transforms	464
	9.11 Finite-Dimensional Representations of Compact Groups	466
	9.12 The Group $SU(2)$	469
	9.13 Representations of $SU(2)$	471
	9.14 Jacobi Polynomials as Matrix Entries	473
	9.15 An Addition Theorem	474
	9.16 Relation of $SU(2)$ to the Rotation Group $SO(3)$ Exercises	476 478
<b>10</b>	<b>Introduction to <math>q</math>-Series</b>	<b>481</b>
	10.1 The $q$ -Integral	485
	10.2 The $q$ -Binomial Theorem	487
	10.3 The $q$ -Gamma Function	493
	10.4 The Triple Product Identity	496
	10.5 Ramanujan's Summation Formula	501
	10.6 Representations of Numbers as Sums of Squares	506
	10.7 Elliptic and Theta Functions	508
	10.8 $q$ -Beta Integrals	513
	10.9 Basic Hypergeometric Series	520
	10.10 Basic Hypergeometric Identities	523
	10.11 $q$ -Ultraspherical Polynomials	527
	10.12 Mellin Transforms Exercises	532 542
<b>11</b>	<b>Partitions</b>	<b>553</b>
	11.1 Background on Partitions	553
	11.2 Partition Analysis	555
	11.3 A Library for the Partition Analysis Algorithm	557

	Contents	xi
11.4	Generating Functions	559
11.5	Some Results on Partitions	563
11.6	Graphical Methods	565
11.7	Congruence Properties of Partitions	569
	Exercises	573
<b>12</b>	<b>Bailey Chains</b>	<b>577</b>
12.1	Rogers's Second Proof of the Rogers–Ramanujan Identities	577
12.2	Bailey's Lemma	582
12.3	Watson's Transformation Formula	586
12.4	Other Applications	589
	Exercises	590
<b>A</b>	<b>Infinite Products</b>	<b>595</b>
A.1	Infinite Products	595
	Exercises	597
<b>B</b>	<b>Summability and Fractional Integration</b>	<b>599</b>
B.1	Abel and Ceşaro Means	599
B.2	The Ceşaro Means ( $C, \alpha$ )	602
B.3	Fractional Integrals	604
B.4	Historical Remarks	605
	Exercises	607
<b>C</b>	<b>Asymptotic Expansions</b>	<b>611</b>
C.1	Asymptotic Expansion	611
C.2	Properties of Asymptotic Expansions	612
C.3	Watson's Lemma	614
C.4	The Ratio of Two Gamma Functions	615
	Exercises	616
<b>D</b>	<b>Euler–Maclaurin Summation Formula</b>	<b>617</b>
D.1	Introduction	617
D.2	The Euler–Maclaurin Formula	619
D.3	Applications	621
D.4	The Poisson Summation Formula	623
	Exercises	627
<b>E</b>	<b>Lagrange Inversion Formula</b>	<b>629</b>
E.1	Reversion of Series	629
E.2	A Basic Lemma	630
E.3	Lambert's Identity	631
E.4	Whipple's Transformation	632
	Exercises	634

<b>F Series Solutions of Differential Equations</b>	<b>637</b>
F.1 Ordinary Points	637
F.2 Singular Points	638
F.3 Regular Singular Points	639
Bibliography	641
Index	655
Subject Index	659
Symbol Index	661
