Contents

Introduction *page* 1

1	**Infrared Emission Mechanisms**	5
1.1	Some photometric definitions	5
1.2	Blackbodies	7
1.3	Atomic spectra	10
1.4	Molecules	16
1.5	Synchrotron radiation	23
1.6	Further reading	24
2	**The Infrared Sky**	25
2.1	Introduction	25
2.2	Atmospheric transmission	28
2.3	Terrestrial background radiation	33
2.4	Extraterrestrial background sources	35
2.5	South Pole sites	37
2.6	The sky as revealed by infrared surveys	38
2.7	Balloon and airplane observatories	40
2.8	Satellite observatories	40
2.9	Infrared databases	43
2.10	Further reading	43
3	**Photometry**	44
3.1	Infrared photometry	44
3.2	Infrared photometric bands	48
3.3	Standard star observations	53
3.4	Colors of normal stars	57
3.5	Absolute calibration	61
3.6	IRAS photometry	64
3.7	Bolometric magnitudes	65
3.8	Stellar effective temperatures	66

I. S. Glass
Table of Contents
More information

3.9	*JHKL* photometry of galaxies	68
3.10	Suggestions for further reading	72
4	**Spectroscopy**	73
4.1	Introduction	73
4.2	Stellar spectra	74
4.3	Opacity sources in the infrared	74
4.4	Model atmospheres	77
4.5	Infrared spectral atlases	80
4.6	Interstellar medium	81
4.7	Photodissociation regions	83
4.8	HII regions	86
4.9	Shocks	98
4.10	Solid-state features	99
4.11	Further reading	103
5	**Dust**	105
5.1	Introduction	105
5.2	Absorption and scattering by dust	106
5.3	Practical aspects of interstellar absorption	108
5.4	Determination of the infrared extinction law	109
5.5	Polarization by dust	112
5.6	Models of dust grains	113
5.7	Equilibrium temperatures of grains	116
5.8	Life-cycle of the interstellar medium	118
5.9	Star formation	123
5.10	Dust and HII regions	125
5.11	Dust emission from the Milky Way galaxy	125
5.12	Emission from dust in external galaxies	126
5.13	Further reading	131
6	**Infrared Astronomical Technology**	132
6.1	Introduction	132
6.2	Infrared telescopes in space	133
6.3	Construction components	134
6.4	Individual detectors	141
6.5	Detector arrays	145
6.6	Efficiency of a system	153
6.7	Seeing in the infrared	155
6.8	Some representative instruments	158
6.9	Observing and data reduction	164
6.10	Further reading	168
