Accounting for Tastes

Australian Everyday Cultures

Accounting for Tastes is the most systematic and substantial study of Australian cultural tastes, preferences and activities ever published. Taking its inspiration from Pierre Bourdieu's work, this book examines the relationships between the patterns of participation in the different fields of cultural practice in Australia, and analyses trends of consumption and choice that Australians make in their everyday lives. The book contains detailed examinations of people's cultural choices through a large-scale survey and interviews. It also examines the influence of American culture on Australian choices, and the way work cultures and cultures of friendship affect how Australians choose to spend their leisure time. *Accounting for Tastes* makes a substantial contribution to empirical and policy-oriented social inquiry into questions of cultural practices and preferences.

Tony Bennett is Professor of Sociology at the Open University. His publications include *Outside Literature* (1990) and *Culture: A Reformer's Science* (1998).

Michael Emmison is a senior lecturer in the Department of Anthropology and Sociology at the University of Queensland and is the co-author of *Class Analysis and Contemporary Australia* (1991).

John Frow is the Darnell Professor of English at the University of Queensland, whose most recent book *Time and Commodity Culture* was published in 1997.

Acknowledgements

We are grateful, first, to the Australian Research Council (ARC) for the award of a Large Grant which enabled us to conduct the research on which the findings we report here are based. We are similarly grateful to the University of Queensland for the award of an ARC Small Grant which allowed us to conduct a pilot project which proved invaluable in refining our methodology.

Although three names appear on the cover of this book, others have, at various times, been members of the research team and contributed to the development of the project. We thank David Chant, Georgina Murray, and Judyth Sachs for their inputs in this respect, and David Chant for his advice at a later stage when the project was nearing completion. We also thank Mark Western for his willingness to share his statistical expertise with us and Terry Shaw, the Senior Research Officer of the Statistical Consultancy Unit in the Brisbane office of the Australian Bureau of Statistics, for his assistance in drawing the sample for the survey.

Although the responsibility for designing the *Australian Everyday Cultures* survey on which our findings rest and for the schedule of questions that were explored with a selection of our respondents at a later date was ours, many other people have helped in putting these two components of the inquiry into effect. We thank Barbara Johnstone for her initiative, efficiency and unfailing good humour in organising the focus discussion groups whose conversations helped us immeasurably in designing our pilot survey. We owe

Andrea Lanyon a similar debt for her thoroughness and patience in introducing two of us to the unforgiving literalism of the SAS program which, eventually, we learned to live with and even to enjoy.

Before we got to that stage, however, our data needed to be coded and entered. We thank Sean Smith, Andrew Peake, Susan Luckman and James Lette whose expert knowledge of contemporary Australian popular culture made a significant contribution to this process.

At a later stage, when all the numbers were in, we relied substantially on Eduardo de la Fuente to organise a team of interviewers to conduct home-based interviews with a selection of our respondents. We thank Eduardo for this work as well as for the clarity of the report he prepared to guide us through the interview transcripts. We are also grateful to the interviewers for the skill, tact and engagement with which they approached their task. Thanks, then, to Annelise Mellor, Gil Woodley, Linda Campbell and to Barbara Johnstone again. And a big thanks to Glenda Donovan for her prompt and expert translation of the interview tapes into printed transcripts, and to Bev Jeppesen and Monique Hudson for their help in preparing the final typescript.

We also benefited from the critical but helpful comments of the friends and colleagues who looked through the early drafts of different parts of this book. Our special thanks here to Christine Alavi, Patrick Buckridge, Jim McKay, and Graeme Turner for their insightful criticisms.

The final and greatest debt we need to acknowledge, however, is that which we owe the 2756 respondents who completed our survey, especially those who agreed to a follow-up interview. We thank them for their interest in the project, for the time they spared to share with us – whether anonymously or in person – the details of their cultural interests and activities. We have no way of knowing what any of them would make of this book. But we would like to think that, however little or however much they might agree with our arguments, they would recognise that we have sought to make good and productive use of the information they placed in our hands.

We would like to thank Penguin Books Australia for permission to reproduce the cover of Albert Facey's *A Fortunate Life* on the front cover of this book.
