Editor's Statement	vi
Preface to Paperback Edition	xiii
Preface	xv
Chapter 1 The Elementary Theory of Partitions.	1
1.1 Introduction	1
1.2 Infinite Product Generating Functions of One Variable	3
1.3 Graphical Representation of Partitions.	6
Examples	13
Notes	14
References	14
Chapter 2 Infinite Series Generating Functions	16
2.1 Introduction	17
2.2 Elementary Series-Product Identities	17
2.3 Applications to Partitions	23
Examples	28
Notes	30
References	31
Chapter 3 Restricted Partitions and Permutations	33
3.1 Introduction	33
3.2 The Generating Function for Restricted Partitions	33
3.3 Properties of Gaussian Polynomials.	35
3.4 Permutations and Gaussian Multinomial Coefficients	39
3.5 The Unimodal Property.	45
Examples	49
Notes	51
References	52
Chapter 4 Compositions and Simon Newcomb's Problem	54
4.1 Introduction	54

4.2	Composition of Numbers	54
4.3	Vector Compositions	57
4.4	Simon Newcomb's Problem	59
	Examples	63
	Notes	65
	References	65
Chapter 5	The Hardy–Ramanujan–Rademacher Expansion of $p(n)$	68
5.1	Introduction	68
5.2	The Formula for $p(n)$	71
	Examples	81
	Notes	85
	References	86
Chapter 6	The Asymptotics of Infinite Product Generating Functions	88
6.1	Introduction	88
6.2	Proof of Theorem 6.2	89
6.3	Applications of Theorem 6.2	97
	Examples	97
	Notes	100
	References	101
Chapter 7	Identities of the Rogers–Ramanujan Type	103
7.1	Introduction	103
7.2	The Generating Functions	106
7.3	The Rogers–Ramanujan Identities and Gordon's Generalization	109
7.4	The Göllnitz–Gordon Identities and Their Generalization	113
	Examples	116
	Notes	118
	References	118
Chapter 8	A General Theory of Partition Identities	121
8.1	Introduction	121
8.2	Foundations	121
8.3	Partition Ideals of Order 1	124
8.4	Linked Partition Ideals	128
	Examples	136
	Notes	137
	References	138

Contents	ix
Chapter 9 Sieve Methods Related to Partitions	139
9.1 Introduction	139
9.2 Inclusion–Exclusion	139
9.3 A Sieve for Successive Ranks	142
Examples.	156
Notes	158
References	158
Chapter 10 Congruence Properties of Partition Functions	159
10.1 Introduction	159
10.2 Rödseth’s Theorem for Binary Partitions	161
10.3 Ramanujan’s Conjecture for 5^n	167
Examples.	175
Notes	177
References	178
Chapter 11 Higher-Dimensional Partitions	179
11.1 Introduction	179
11.2 Plane Partitions	179
11.3 The Knuth–Schensted Correspondence	184
11.4 Higher-Dimensional Partitions	189
Examples.	198
Notes	199
References	200
Chapter 12 Vector or Multipartite Partitions	202
12.1 Introduction	202
12.2 Multipartite Generating Functions	202
12.3 Bell Polynomials and Formulas for Multipartite Partition Functions	204
12.4 Restricted Bipartite Partitions	207
Examples.	209
Notes	210
References	211

Chapter 13	Partitions in Combinatorics	212
13.1	Introduction	212
13.2	Partitions and Finite Vector Spaces	212
13.3	Partitions of Sets	214
13.4	The Combinatorics of Symmetric Functions	221
	Examples	225
	Notes	227
	References	228
Chapter 14	Computations for Partitions	230
14.1	Introduction	230
14.2	Elementary Algorithms	230
14.3	Algorithms from Generating Functions	233
14.4	Computations for Higher-Dimensional Partitions	234
14.5	Brief Tables of Partition Functions	237
14.6	Table of the Plane Partition Function	237
14.7	Table of Gaussian Polynomials	240
14.8	Guide to Tables	243
	Notes	243
	References	244
	Index for Definitions of Symbols	245
	Author Index	250
	Subject Index	252
