<i>List of Illustrations</i>	<i>page</i>	x
<i>Preface</i>		xiii
<i>Acknowledgements</i>		xviii
1 History and development of the 20-cm Schmidt–Cassegrain		1
2 First observation – the Moon		8
After the observation		13
How to find your way around the sky by various techniques		15
Star charts		16
The cognitive map; best star chart of all		25
Star hopping		25
Setting circles		28
About time		29
A word on maintenance and cleaning		31
3 Planets, double stars and other bright things		33
Mercury and Venus, the inner planets		35
Mars		37
Jupiter		40
Saturn		45
Uranus		49
Neptune		50
Pluto		51
Double stars		53
Optimizing the view		55
The eye as a detector		58
The atmosphere		62
The observing site		64

CONTENTS

4 Deep sky	68
Gas, dust and stars as nebulae	69
Nebular filters	74
Clusters of stars	76
Globular clusters	78
Supernova remnants	80
Find a galaxy	82
More galaxies	85
The Messier Marathon	88
The observer's log	89
Sketching images	91
5 A couple of interesting problems	95
Asteroids	95
Variable stars	102
Comets	104
The fastest star, Barnard's Star	110
The nearest star, Proxima Centauri	112
Solar observations	112
Eclipse chasing	120
Seeing very old/new Moons	125
Terrestrial observations	127
Artificial Earth satellites	130
How far can you see?	134
6 Some accessories for the telescope	137
Changing the effective focal length	138
Binocular eyepiece adapter	139
Making things handy	140
Finder telescopes	143
Flashlights	144
Drive correctors	145
Focus motors	147
Dew control	147
Electronic setting circles	150
7 Observing with friends	152
The astronomy club environment	152
Field observations	155
Regional, national and international networking	157

CONTENTS

8	Projects	159
	Planetary, Lunar and Solar patrols	160
	Variable stars	161
	Lunar occultations	164
	Mutual Jovian eclipses	167
9	Photography	169
	Deep-sky photography	178
	Advanced exercises	183
	Advanced mistakes	184
10	Photometers, computers, image intensifiers and television	187
	Photometers	187
	Spectroscopy	197
	Television	199
	Image intensifiers	204
	Computers	206
11	Afterword	209
	Appendix 1 Sources of further information	214
	Books	214
	Atlases and catalogues	215
	Periodicals	215
	Computer nets	217
	Organizations	217
	Manufacturers	220
	Appendix 2 How to align the polar axis with the Earth's axis of rotation	223
	Appendix 3 Collimation of an S-C telescope	232
	Appendix 4 Cleaning the corrector plate	237
	Appendix 5 Mount vibrations	239
	Appendix 6 Field operations packing checklist	242
	Appendix 7 Astronomical nomenclature	244
	Appendix 8 Catalogue of bright stars & interesting things	247
	Appendix 9 Catalogue of nearby stars	251
	Appendix 10 Messier Catalogue	253
	<i>Index</i>	258
