978-0-521-64608-6 - Antisocial Behavior by Young People

Michael Rutter, Henri Giller and Ann Hagell

Index

[More information](#)

## Index

- abuse, 187–8; child, 260; *see also* alcohol abuse; drug abuse
- accentuation effects, 300–2
- across-twin–across-trait correlation, 137, 174
- actors vs. acts, 315–16
- actus rea*, 25
- acute life events, 298–9
- additives, food, 158–9
- adolescence: changed roles in, 91; meaning of, 91; perpetual, 91
- adolescence-limited antisocial behavior, 98–104, 377
- adolescent crime, 30–45; age in, 30–1; age trends in, 36; child victimization in, 38–40; criminal offenses in, 31–2; criminal statistics on, 32–7; gender in, 35–6 (*see also* gender differences); male convictions for, 30–1; patterns of involvement in, 31; as proportion of total crime, 34; self-reported offending in, 40–5; types of offenses in, 34–5; victim surveys in, 38
- Adolescent Health Behavior Survey, 44
- adoptive studies, 130–4, 184; on environmental mediation, 175–7; limitations of, 177; National Child Development Study, 184–5; problems with, 175; Swedish, 107, 132–3
- adult life experiences, 169–70
- adult-onset antisocial behavior, 104–5
- African-Americans: heterogeneity among, 237; imprisonment rates in, 245; living conditions of, 248; police stops of, 241–2; victimization of, 238–9; violent crimes by, 243–4, 249
- Afro-Caribbeans, 247; victimization of, 238; violent crimes by, 243–4, 249
- age: in adolescent crime, 30–1; as ambiguous variable, 284; in antisocial behavior, 291; criminal incapacity and, 27; criminal responsibility and, 25–30; developmental changes with, 28–9; vs. cohort, 284
- age of offending: gender in, 262; peak, 70, 75–8; peak, gender in, 259
- age of onset, of antisocial behavior, 98–105; adult, 104–5; family risk factors in, 100–1; life-course–persistent vs. adolescence-limited, 98–104, 377, 379; very early, 377
- age trends: in adolescent crime, 36; in chronic offending, 286–8; gender differences and, 258–9; in peer group influences, 197–8
- aggregate level of crime, 315
- aggressiveness, 147–8; androgens in, 160–1; autonomic reactivity in, 161; cognitive processing bias in, 151–2; drug abuse in, 118; gender in, 268–9; media violence in, 216; peer relationships in, 148–9; reactive vs. proactive, 147–8; reduction of, 333; relational, 148; serotonin in, 162; *see also* violence
- alcohol abuse, 152–5, 250; adult, 296; crime and, 110, 118; crime trends and, 84, 85; in disinhibition, 313; early-onset antisocial behavior and, 101; gender in, 275; increased, 91–2; in violence, 154; in Virginia Twin study, 154
- “alternatives to custody” schemes, 356–7, 384
- American Mobilization for Youth, 347
- androgens, 160–1, 269–70
- anorexia, 85
- anti-crime groups, 345–6
- antisocial behavior: beginnings of, 2; differentiators of (*see* differentiators); gender in, 262–6
- antisocial personality disorder, 1–2, 95, 123–4; gender in, 264–5

- anxiety, 296–7  
 architectural design, 347–8  
 area differences, 220–30; Chicago study of, 225; community cohesiveness in, 226–7; community crime careers in, 228–30; community structure in, 228–9; in distribution of offenders, 223–30; in distribution of offenses, 221–3; drinking in, 221–2; ecological fallacy in, 227; evaluation of, 320; family-mediated vs. direct influence of, 227–8; guardianship in, 229; high-crime areas in, 220–1, 225–6; hypothesis testing in, 230; individual–community interactive effect in, 226; physical features in, 227; public entertainment in, 221–2; repeat victimization in, 222–3; selection vs. influence in, 224; velocity in, 229  
 arrest, decision to, 52  
 Asian-Americans, 243  
 Asperger's syndrome, 111  
 associations, validity of, 18  
 attachment, 334  
 attendance, 232–3  
 attention deficits, 124, 143, 149–51; antisocial behavior and, 96–8; gender in, 263–4; IQ and, 142; *see also* hyperactivity  
 attrition, 285  
 authority conflict pathway, 291–3  
 autism, 111  
 autonomic reactivity, 161–2  
 autonomic response, to distress and suffering, 109–10  
  
 Bangladeshi, 246–7  
 BASIC parent skills training, 329–30  
 befriending schemes, 356  
 behavior: biology and, 14–15, 378–9 (*see also* biological mediators); of child on parents, 134, 168, 171–2; externalizing, 120, 145–7; hormones and, 15; risky, 31–2  
 behavioral changes: aggregate level, 315; within-individual, 178, 315, 317 (*see also* prevention and intervention)  
 behavioral effects: child on parent, 134, 168, 171–2; parent on child, 172–3; self-generated, 173–4  
  
 behavioral management programs, 333  
 belief, 334  
 bias: in cognitive processing, 151–2; in criminal statistics, 36; in reporting, 12  
 bifurcation, 385  
 biological mediators, 155–65, 379; androgens, 160–1; autonomic reactivity, 161–2; behavior and, 14–15, 378–9; gender in, 268–70; nutrients, 157–9; overview of, 165; physique, 159–60; problems with studies of, 155, 156–7; serotonin metabolism, 162–5; stressful experiences and, 155; studies of, 15; toxins, 157–9  
 biological psychiatry, 128  
 birth injury, 137  
 birth weight, low, 137–9  
 blame: age and, 25; in criminal justice, 25  
 bonds, strengthening, 334  
 boot-camp programs, 360–1  
 Botvin's Life Skills Training, 332  
 bourgeois family, 86–7  
 brain, social construction of, 128  
 brain dysfunction/damage, minimal, 138, 143  
 breathalyser, 350  
 British Crime Survey (BCS), 4, 38; of area in crime, 220–1  
 British Priority Estates Project, 346–7  
 broken homes, 183–7; *see also* divorce  
 bulimia nervosa, 85  
 bullying, reduction of, 333–4  
 burglary, 34; decrease in, 73; gender in, 35  
  
 Cambridge Study, 30–1, 44  
 car patrols, 50–1  
 careers, criminal: *see* criminal careers  
 case studies, of interventions, 324–5  
 causal chains, 17–18, 310–13; confounding variables in, 19; drug dependence in, 17–18; indirect, 301–2, 378  
 causality, 15–23, 128, 378–9; associations with, 20–1; comparisons of, international, 16; concepts of, 15–17; direction of, 19–20; factors in, 16; genetics in, 20; longitudinal data on, 280–1; models of, 309–15; multiphase, 209; positivistic approaches to, 22–3; processes of, 5; strength of effects in, 21–2; testing of, 18–21; two-way

- interplay in, 378; types of, 15–16, 378; *see also* specific risk factors
- cautioning: in crime trend statistics, 71; decisions on, 54; for delinquency, 354; for first offenses, 355; gender in, 260–1; net-widening effects of, 354; repeated, 355–6; in United Kingdom, 81–2, 354
- cerebral palsy, 137–8
- chain effects: *see* causal chains
- change: possibilities for, 308–9; schools in, 331–4; within-individual, over time, 178
- charge–caution decision, 54
- charge, decisions to, 53–5
- Chicago Area Project, 346–7
- child abuse, 260
- child effects, on parents, 134, 168, 171–4; *see also* person effects, on environment
- child-focused approaches, 367
- child psychiatry, 5
- child self-reports, 12
- child victimization: early, 187–8; statistics on, 38–40
- childhood–adulthood transition, 91
- children, international regulations on, 29–30
- The Children, Young Persons and Their Families Act of 1989, 358
- choice model, 340; rational, 340–1
- Christchurch longitudinal study, 100, 141; adoptees in, 184–5; family separations vs. conflict in, 186; resilience in, 206–7
- chronic offenders: *see* persistent young offenders; repeat offenders
- chronicity, 60–1
- citizen reports, 50–1
- civil protest, 113
- classification: of antisocial behavior, 376; of crime, 65; risk, 370
- clear-up rate, 50
- cocaine abuse, 153, 250; *see also* drug abuse
- coercion model, 366; *see also* parent management training
- coercion theory, 191, 192–3
- coercive parenting, 188–92
- coercive strategies, 53
- cognitive-behavioral methods, 365–6
- cognitive functioning: biased, 151–2; planning and foresight, 142; verbal skills deficits, 142; *see also* social information processing
- cognitive performance, 141; *see also* intelligence
- cohort, vs. age, 284
- Colorado adoption study, 134
- commitment, 334
- community “alternatives to custody” schemes, 356–7, 384
- community base, 370
- community cohesiveness, 226–7
- community crime career, 228–30
- community focus, 80
- community interventions, 320
- community service, 358
- community surveillance, 345–8
- comorbidity, 5–6, 156–7, 280; of psychological disorders, 119–20
- comparative studies, 6; designs of, 319
- compensation, 358
- conduct disorders, 1–2, 123; adult behavior with, 172; depression and, 296–7; gender in, 263, 265, 267; genetics in, 130–1; psychosocial treatments for, 366; trends in, 71
- confessions, 53
- conflict, family, 186; *see also* family factors
- confounding variables, causal chain, 19
- contagion effect, 183
- continuity, 300–1; cumulative, 298–302
- contraceptive use, 250
- control: lack of, 145–6; social, 30
- controlled trials, randomized, 316–18; *see also* research
- “cop culture,” 50
- copycat crimes, 218
- correlations, 21–2
- cost-benefit tradeoff: analyses of, 323–4; offender perception of, 314–15
- covert pathway, 291–3
- crime: classification of, 65; “normal,” 112–13; overt vs. covert, 121; statistically normative, 112; victimless, 32
- crime disorders, 89–92
- crime displacement, 344–5
- crime gene, 119
- Crime in the United States*, 33
- crime prevention: *see* prevention
- crime rates, 315; gender in, 256–66; in late 1980s and 1990s, 66–8; participation vs. frequency in, 281; postwar trends in, 69; rise in, 7; rise in, international, 65–9, 380–1; from victim surveys, 67–8

- crime rates, juvenile postwar, 69–72; conduct disorders in, 71; Epidemiological Catchment Area study of, 71; of peak age of offending in, 70; self-report studies on, 71; in United Kingdom, 70; in United States, 70
- crime statistics, 32–7; adolescent vs. total crime, 34; age trends in, 36; bias in, 36; data in, 32–3; gender in, 35–6; insurance reporting in, 46, 48; Interpol, 65; on juveniles, 34, 40; official, 4; problems with, 36–7; processing variations in, offender and offense, 36–7; on time trends, 64–5 (*see also* time trends); types of offenses in, 34–5; U.K., 32–3; underreporting in, 38; U.S., 33
- crime surveys: national, 4; victim, 4, 38, 67–8
- crime trends: *see* time trends
- criminal careers, 281–2, 382; adolescence-limited vs. adult, 288–9; adult-onset, 289; changes with age in, 286–8; delinquent pathways in, 290–4; frequent vs. occasional chronic offenders in, 286; gender in, 259; recidivism in, 285–6; subgroup differences in, 289; violent, 289–90; *see also* persistent young offenders
- criminal damage, 73
- criminal justice policy: *see* policy
- criminal offenses: *see* offending
- criminal responsibility: age and, 25–30; juvenile, 26–7
- criminogenic needs, 370–1
- criminology, 5
- Crown Prosecution Service (CPS), 55–6
- cumulative continuity, 298–302
- custodial care, 384; abuse history of children in, 361; beneficial effects in, 364–5; beneficial turning points in, 364; for delinquency, 361–5; effect of, 362–4; fall in, 361; in local authority community homes, 362–4; types of, 364; in youth offender institutions, 362–4
- custody, 351; community alternatives to, 356–7, 384; declining use of, 81–2; incapacitation effects of, 351–4; selective approach to, 352–3; use of, 56
- Danish register study, 107
- data, 3–4; developments in, 4–6, 382; high-quality epidemiological, 13–14; non-epidemiological, 13–14; sources for, 11–12, 382; *see also* research
- death penalty sentencing, race in, 246
- decision making, crime, 340–1
- decisions to charge, 53–5
- delinquency, 57–8; concepts and measures of, 31; drug use and, 118 (*see also* drug abuse); factors in, 96; genetics in, 131; heterogeneity of, 95–6; IQ on, 140–3; pervasiveness and persistence of, 95; progression of, 290–4; socialized vs. unsocialized, 120–1; varieties of, 5
- delinquency, responses to, 354–68; community “alternatives to custody,” 356–7; custodial care, 361–5, 384; diversionary policies, 354–6, 384; psychological treatment, 365–8; punishment, 359–60; restorative justice, 357–9, 384; “short sharp shock” approaches, 360–1, 384
- delinquents: official vs. non-official, 58; violent vs. nonviolent, 106 (*see also* violence)
- delusional thoughts, 111
- demographics, crime, 86; high-crime areas, 346
- deployment practices, police, 50–1
- depression, 296–7; antisocial behavior and, 120; conduct problems and, 296–7; crime trends and, 84–5; teenage, 29
- deterrence: *see* prevention and intervention
- developmental changes, 28–9
- diagnoses, psychiatric, 123–4
- differentiators, key valid, 96–105; age of onset, 98–105; hyperactivity, 96–8
- differentiators, probably valid, 105–11; psychopathy, 109–10; serious mental disorder, 110–11; violence, 105–9
- dimensional vs. categorical terms, 21–2
- Director of Public Prosecutions (DPP), 55
- discretion, police, 49
- disinhibition, of antisocial behavior, 313
- displacement, crime, 344–5
- disruptive behavior, 145–7; early treatment of, 329–31; genetics of, 120
- distribution of offenses, 221–3
- diversionary approaches, 78, 81; for delinquency, 354–6, 384

- divorce: increase in, 7; repeated separations in, 85–186; *see also* broken homes *doli incapax*, 27
- dose–response relationship, 318
- double blind trials, 317–18
- drug abuse, 8, 110, 117–18, 152–5, 250; adult, 296; in causal chains, 17–18; childhood aggression and, 118; crime trends and, 84, 85; in disinhibition, 313; gender in, 275; in violence, 154; in Virginia Twin study, 154; *see also* drug use
- drug arrests, race in, 245
- drug offenses: gender in, 35; self-reported, 43
- drug trafficking, 153–4; by African-Americans, 244; by gangs, 198–9
- drug use, 7; delinquency and, 118; increased, 91–2
- drunk driving, 350
- DSM-IV, 123–4
- Dunedin longitudinal study, 44, 101, 106–7, 143, 145–7, 164; repeated separations in, 185–6; teenage mothers in, 181
- eating disorders, 85
- ecological fallacy, 227
- economic context, youth, 86–9
- economic stress, 199–201, 203
- education: preschool, 327–8; rates for staying on in, 88
- effect size, 321
- effects, strength of, 21–2
- effort, to commit crime, 341–2
- emotion provoking, 311
- emotional detachment, 109–10
- emotional disorders: adult, 296–7; antisocial behavior and, 119–20; crime and, 119–20
- emotions: development and, 28; in teenagers, 29
- environmental effects, 175–9; in adoptee families, 177; broad measures of, 180; evidence of, 175–6; extrafamilial environments in, 179; multivariate analyses of, 176; nonshared effects in, 176–8; selection vs. causation in, 179; shared effects in, 176, 178; single vs. multiple risk factors in, 180–1; treatment studies on, 179; in twin studies, 177–8; within-individual change over time in, 178
- environmental risk, treatment studies on, 179
- Epidemiological Catchment Area study, 71; ethnicity in, 244
- ethnic variations, 7–8, 235–49; in Africans and West Indians, 236, 249; in Afro-Caribbeans, 247; in apprehension, 58; in Asian-Americans, 243; in biological risk factors, 248–9; concepts and methods in, 235–7; in criminal processing, 242–6; in death-penalty sentencing, 246; in drug arrests, 245; within ethnic groups, 248; explanations of, 246–9; in home neighborhoods, 247; in immigrant status, 237; in imprisonment rates, 239–40; in intelligence–crime association, 145; in intermarriage, 236; in police stops, 241–2; in psychosocial disturbance/psychopathology, 247; in religion, 236–7; in self-reported offending, 240–1; in South Asians, 246–7; suspect in, 52; in U.K. crime, 239–43; in U.S. crime, 243–5; victim in, 52; in victimization, 237–9
- eugenics, 136–7
- evaluation, 315–27, 383; actors or their acts in, 315–16; of community interventions, 320; cost-benefit analyses in, 323–4; of individual response differences, 321–3; of interventions, 324–5; meta-analyses in, 320–1; quasi-experiments in, 319; randomized controlled trials in, 316–18; of societal risk relief, 326–7; of targeting high-risk groups, 325
- evidence, from children, 53
- experiences, influential, 298–306
- externalizing behavior, 145–7; genetics of, 120
- family breakdown, 87
- family factors, 91, 129, 181–93; abuse and neglect, 187–8; broken homes, 183–7; coercion and hostility, 188–92; conflict, 186; criminal parents, 129–30; large family size, 182–3; parenting, ineffective, 192–3; supervision, ineffective, 192–3, 210; teenage parents, 181–2; twin and adoptee data on, 130, 132–3; *see also* environmental effects; genetic factors

- Family Group Conference (FGC), 358–9  
 family patterns, 86–7; changes in, 6–7  
 family stress, 199–201; coefficients for, 200, 201; gender in, 273–4  
 Fast Track Program, 334–5  
 fenfluramine challenge, 163, 164  
 fetal alcohol syndrome, 157–8  
 Finnish longitudinal study, 101, 104–5  
 firearms, 249–50  
 first offenders, 354; cautioning for, 355  
 food additives, 158–9  
 food sensitivities, 158–9  
 foot patrols, 51  
 foresight deficits, 142  
 foster care, 186–7, 361–2; abuse history of children in, 362; *see also* custodial care  
 Fourth United Nations Survey on Crime Trends, 67
- gambling, 219  
 gangs, 198–9; girl, 74–5; *see also* peer groups  
 gas detoxification, 17  
 gender differences, 8–9, 35–6, 254–77, 381–2; in age of offending, 258–9, 262; in age of offending, peak, 259; in aggression, 268–9; in antisocial disorders, 262–6; in antisocial personality disorder, 264–5; in biological mediators, 268–70; in conduct disorder, 263, 265; in crime trends, 74; in criminal career duration, 259; explanations for, 255–6, 266–76; in family stress response, 273–4; feminist orientation and, 275–6; in gun ownership, 275; in hyperactivity, 267–8; in individual risk factors, 267–71; in institutional care, effects of, 272–3; in judicial processing, 260–1; in oppositional/defiant disorder, 262–3; parental psychopathology and, 272; in patterns of offending, 256–60; in psychiatric disease, 254–5; in psychological vulnerability, 272–3; psychosocial, 254–5; in psychosocial risks, 271–4; in rates of crime, 256–66; in recidivism, 259; same vs. different origins in, 266–7; self-report findings on, 261–2; in serotonin metabolism, 270–1; in social context, 274–6; in social groups, 274; in substance abuse, 275; in supervision, 271–2; in violence, 261  
 gender–type relationship, 74–5  
 gene, crime, 119  
 gene–environment correlation: active and evocative, 133–4, 174–5; passive, 133, 174  
 gene–environment interaction, 132–3  
 genetic factors, 20, 129–37; accumulation and enhancement of, 135; in antisocial behavior persistence, 131; in conduct disorders, 130–1; in delinquency, 131; in development, 135; in hyperactivity, 130, 379; interactions of, 379; limitations in, 135; monoamine oxidase metabolism defect in, 132; in multifactorial traits, 136; multivariate analyses of, 175; nature–nurture in, 130, 132–5; in psychosocial risk factors, 174–5; in risk dimensions, 136; routes of mediation of, 135–7; “susceptibility” genes in, 135–6; as third-variable effects, 180; twin and adoptee data on, 130–1, 132–3; in violent crime, 131–2  
 genetics, of race, 236  
 gestation, short, 137–9  
 Gini coefficient, 88  
 girl gangs, 74–5  
 Good Behavior Game, 333  
 gratification, difficulty delaying, 147  
 guardianship, 229  
 guilt, 28; development and, 28–9; elements of, 25  
 guns, 249–50; availability of, 16; crimes involving, 34–5; gender in ownership of, 275
- hallucinogen abuse, 153  
 halo effects, 283–4  
 handguns, 249–50; *see also* guns  
 Head Start, 327  
 “heavy end” IT (HEIT), 357  
 height, 16–17, 89, 378  
 heroin abuse, 153, 154, 250  
 heterogeneity, of antisocial behavior, 128, 310, 376–7; uncertainties in, 377  
 high-crime areas, 346  
 high-risk groups, targeting, 325  
 High/Scope Perry Preschool Study, 327–8  
 Hispanic populations, 8

- historical trends, 64–92; *see also* time trends
- home–school relationships, 233
- homicide, juvenile, 115–17; characteristics in, 116; delinquent behavior and, 116–17; psychopathology in, 116
- homicides: guns in, 16, 249–50; by women, 260
