<b>1</b>	<b>Introduction to the concepts used in the observation, measurement and interpretation of fracture surface topography</b>	<b>1</b>
1.1	Aspects of seeing	1
1.2	Some scaling issues	6
1.2.1	General	6
1.2.2	Fractal geometry	10
1.2.3	Microstructural dimensions and stress fields	12
1.3	What is a crack?	14
1.4	The origin of cracks	17
1.4.1	Introduction	17
1.4.2	Nucleation of cracks by deformation	18
1.4.3	Other aspects of crack nucleation	21
1.5	Mechanics and micro-mechanics of cracks	23
1.5.1	Introduction	23
1.5.2	Stress fields around an elliptical hole and a crack	25
1.5.3	Critical condition for crack propagation: Griffith and Irwin	28
1.5.4	Other topics	32
<b>2</b>	<b>Observing, describing and measuring fracture surface topography: some basics using Ketton stone as an example</b>	<b>35</b>
2.1	An approach to appreciating 3-D topography	35
2.2	A brief look at the past	37
2.3	What is Ketton stone?	42
2.4	Hooke's observations	44
2.5	Light microscopy	45
2.5.1	The naked eye	45
2.5.2	General	46
2.5.3	Resolution and depth of field	47
2.5.4	Geometrical considerations	50
2.5.5	Illumination	51
2.6	Optical sections and quantitative descriptions of topographical detail	52

2.7	Confocal scanning light microscopy	56
2.8	Scanning electron microscopy	58
2.8.1	General	58
2.8.2	Images produced by secondary and back-scattered electrons	59
2.8.3	Resolution, magnification and depth of field	62
2.8.4	Geometrical considerations	62
2.9	SEM and Ketton stone	64
2.10	Other experimental procedures for investigating fracture surfaces	68
<b>3</b>	<b>Tilting cracks</b>	<b>69</b>
3.1	Evolution of smoothly curving cracks with double curvature	69
3.2	Modes of loading	74
3.3	The geometrical constraint	76
3.3.1	Definitions of tilt and twist	76
3.3.2	Growth of cracks to form smooth surfaces	79
3.3.3	Experimental observation of crack expansion	80
3.4	Growth or evolution of a crack under mixed I/II conditions	81
3.5	Cracks round bends	87
<b>4</b>	<b>River line patterns</b>	<b>91</b>
4.1	Topographical features of river line patterns	91
4.2	Development of river line patterns on crystalline cleavage facets	94
4.2.1	Steps formed by cracks intersecting screw dislocations	94
4.2.2	Increasing step height in crystalline solids	102
4.3	River patterns in amorphous brittle solids: Sommer's experiment	103
4.3.1	Sommer's experiment	104
4.4	Measurement of surface topography using interference light microscopy	109
4.5	Examples of river lines in a variety of solids	113
4.6	Nucleation of river line steps	117
4.7	Separation at the steps	118
<b>5</b>	<b>Mirror, mist and hackle: surface roughness, crack velocity and dynamic stress intensity</b>	<b>121</b>
5.1	The meaning of 'mirror', 'mist' and 'hackle'	121
5.2	Surface topography from the measurement of roughness profiles	129
5.2.1	Takahashi and Arakawa's experiment	129
5.2.2	Roughness measurements	131
5.2.3	Roughness parameters	134
5.3	Some examples of changes in roughness with $K_d$ and $v$	136
5.4	Origins of roughness	139

*Contents*

ix

5.4.1	Nucleation and growth of micro-cracks ahead of the growing crack	140
5.4.2	Plastic deformation ahead of the growing crack	142
5.4.3	Progressive and increasing micro-branching leading to macro-branching and bifurcation	144
5.5	Correlation of AFM images and topographical detail	147
5.6	Direct observation of progressive roughening	150
<b>6</b>	<b>Cleavage of crystalline solids</b>	<b>157</b>
6.1	Crystallographic cleavage	157
6.2	Some crystallographic aspects	160
6.3	Cleavage of mica	163
6.4	Fracture of zinc	166
6.5	River lines on calcite	171
6.6	Interpretation of interference patterns on fracture surfaces	175
6.6.1	Interference at blisters and wedges	176
6.6.2	Interference at fracture surfaces of polymers that have crazed	178
6.6.3	Transient fracture surface features	180
6.7	Block fracture of gallium arsenide	180
6.7.1	Three-point bend tests	180
6.7.2	Determining the orientation of cleavage facets	181
6.7.3	Rough surfaces	182
6.8	Cleavage of b.c.c. metals, including steel, and the stress intensity effect	183
6.8.1	Cleavage along twin–matrix interfaces	184
6.8.2	Progressive roughening	186
6.9	Quantitative stereo-microscopy and the determination of the orientation of planar facets	187
6.10	Cleavage fracture of polycrystalline materials	191
<b>7</b>	<b>Fracture at interfaces</b>	<b>195</b>
7.1	Cracks at interfaces	195
7.2	Interface and inter-phase fracture	198
7.3	Replica techniques in fractography	204
7.4	Chemical and physical analysis of fracture surfaces: interfaces and inter-phases	207
7.5	Interfacial failure in crystalline solids: inter-granular fracture	211
7.6	Interfacial failure in composites: mother-of-pearl	213
7.7	Interface fracture and microstructural detail	214
<b>8</b>	<b>Aspects of ductile fracture</b>	<b>219</b>
8.1	The meaning of ‘ductile’ fracture	219
8.2	Necking and drawing of metals and polymers	223
8.2.1	Pure metals	223

8.2.2	Plane stress and plane strain	225
8.2.3	Cold drawing of polymers	228
8.3	Cup-and-cone fractures	230
8.4	Nucleation of holes	235
8.4.1	Microstructural heterogeneities	235
8.4.2	Fibrillation in polymers	241
8.4.3	Crazing and fracture	242
8.4.4	Shear bands in amorphous metals (metallic glasses)	243
8.5	Ductile fracture at the tip of a growing crack	244
8.5.1	Macroscopic observations	244
8.5.2	Separation processes at the crack tip	247
8.6	A geological equivalent	250
8.7	Topographical characterisation of conjugate fracture surfaces	253
<b>9</b>	<b>Crack dynamic effects</b>	<b>259</b>
9.1	Introduction: the speed of sound and the speed of cracks	259
9.2	Wallner lines and stress wave fractography	263
9.2.1	Wallner lines	263
9.2.2	Stress wave fractography	267
9.2.3	Other methods of measuring the speed of cracks	270
9.2.4	Other Wallner-line effects	272
9.3	Discontinuous crack growth: stop-go	273
9.4	Crack front striations generated by a crack growing under cyclic loading	279
9.4.1	Mechanical fatigue	279
9.4.2	Shrinkage-driven cracking	283
9.5	Transient topographical detail and environmental effects	287
9.5.1	Transient fracture surfaces	287
9.5.2	Effect of environment on the mechanisms of crack nucleation and growth	289
9.5.3	Chemical changes	291
<b>10</b>	<b>Applications of fractography</b>	<b>293</b>
10.1	Importance of fractography	293
10.2	Microstructural analysis	296
10.2.1	Materials that are relatively brittle at ambient temperatures	297
10.2.2	Microstructure of soft materials	301
10.3	Development of new materials and improvement of existing materials	309
10.3.1	The role of inclusions (and microstructure) in the brittleness of steels	309
10.3.2	The toughness of composite materials	312
10.4	Diagnostic tool in failure analysis	327
10.4.1	General considerations	327

<i>Contents</i>	xi
10.4.2 Some examples	332
10.4.3 Case study of the failure of a storage tank	335
<b>Appendix</b>	
Interpretation of Fig. 1.1: the fracture surface of a general purpose grade polystyrene	339
