## Contents

<b>Preface</b>	<b>ix</b>
<b>Guide to the Reader</b>	<b>xi</b>
<b>1 Introduction</b>	<b>1</b>
1.1 <i>Some examples from statistics</i>	2
1.2 <i>Problems and complements</i>	10
<b>2 Notation and Definitions</b>	<b>12</b>
2.1 <i>Stochastic order symbols</i>	12
2.2 <i>The empirical process</i>	13
2.3 <i>Entropy</i>	15
2.4 <i>Examples</i>	17
2.5 <i>Notes</i>	21
2.6 <i>Problems and complements</i>	22
<b>3 Uniform Laws of Large Numbers</b>	<b>25</b>
3.1 <i>Uniform laws of large numbers under finite entropy with bracketing</i>	25
3.2 <i>The chaining technique</i>	27
3.3 <i>A maximal inequality for weighted sums</i>	28

vi	<i>Contents</i>	
3.4	<i>Symmetrization</i>	31
3.5	<i>Hoeffding's inequality</i>	33
3.6	<i>Uniform laws of large numbers under random entropy conditions</i>	34
3.7	<i>Examples</i>	36
3.8	<i>Notes</i>	43
3.9	<i>Problems and complements</i>	43
<b>4</b>	<b>First Applications: Consistency</b>	<b>46</b>
4.1	<i>Consistency of maximum likelihood estimators</i>	46
4.2	<i>Examples</i>	51
4.3	<i>Consistency of least squares estimators</i>	54
4.4	<i>Examples</i>	58
4.5	<i>Notes</i>	59
4.6	<i>Problems and complements</i>	60
<b>5</b>	<b>Increments of Empirical Processes</b>	<b>63</b>
5.1	<i>Random entropy numbers and asymptotic equicontinuity</i>	64
5.2	<i>Random entropy numbers and classes depending on <math>n</math></i>	67
5.3	<i>Empirical entropy and empirical norms</i>	69
5.4	<i>A uniform inequality based on entropy with bracketing</i>	71
5.5	<i>Entropy with bracketing and asymptotic equicontinuity</i>	76
5.6	<i>Modulus of continuity</i>	78
5.7	<i>Entropy with bracketing and empirical norms</i>	82
5.8	<i>Notes</i>	83
5.9	<i>Problems and complements</i>	84
<b>6</b>	<b>Central Limit Theorems</b>	<b>87</b>
6.1	<i>Definitions</i>	87
6.2	<i>Sufficient conditions for <math>\mathcal{G}</math> to be <math>P</math>-Donsker</i>	89
6.3	<i>Useful theorems</i>	90
6.4	<i>Measurability</i>	90
6.5	<i>Notes</i>	92
6.6	<i>Problems and complements</i>	92

<i>Contents</i>		vii
<b>7</b>	<b>Rates of Convergence for Maximum Likelihood Estimators</b>	<b>94</b>
7.1	<i>The main idea</i>	95
7.2	<i>An exponential inequality for the maximum likelihood estimator</i>	97
7.3	<i>Convex classes of densities</i>	102
7.4	<i>Examples</i>	105
7.5	<i>Notes</i>	122
7.6	<i>Problems and complements</i>	122
<b>8</b>	<b>The Non-I.I.D. Case</b>	<b>125</b>
8.1	<i>Independent non-identically distributed random variables</i>	125
8.2	<i>Martingales</i>	134
8.3	<i>Application to maximum likelihood</i>	139
8.4	<i>Examples</i>	142
8.5	<i>Notes</i>	144
8.6	<i>Problems and complements</i>	144
<b>9</b>	<b>Rates of Convergence for Least Squares Estimators</b>	<b>147</b>
9.1	<i>Sub-Gaussian errors</i>	148
9.2	<i>Errors with exponential tails</i>	150
9.3	<i>Examples</i>	151
9.4	<i>Notes</i>	162
9.5	<i>Problems and complements</i>	162
<b>10</b>	<b>Penalties and Sieves</b>	<b>166</b>
10.1	<i>Penalized least squares</i>	166
10.2	<i>Penalized maximum likelihood</i>	175
10.3	<i>Least squares on sieves</i>	183
10.4	<i>Maximum likelihood on sieves</i>	189
10.5	<i>Notes</i>	194
10.6	<i>Problems and complements</i>	194

viii	<i>Contents</i>	
<b>11</b>	<b>Some Applications to Semiparametric Models</b>	<b>199</b>
11.1	<i>Partial linear models</i>	199
11.2	<i>Mixture models</i>	211
11.3	<i>A single-indexed model with binary explanatory variable</i>	233
11.4	<i>Notes</i>	242
11.5	<i>Problems and complements</i>	243
<b>12</b>	<b>M-Estimators</b>	<b>247</b>
12.1	<i>Introduction</i>	247
12.2	<i>Estimating a regression function using a general loss function</i>	250
12.3	<i>Classes of functions indexed by a finite-dimensional parameter</i>	253
12.4	<i>Notes</i>	262
12.5	<i>Problems and complements</i>	262
	<b>Appendix</b>	<b>265</b>
	<b>References</b>	<b>272</b>
	<b>Symbol Index</b>	<b>279</b>
	<b>Author Index</b>	<b>281</b>
	<b>Subject Index</b>	<b>283</b>
