Econometric Modelling

Macroeconomic modelling has been one of the most important and influential areas of economic research. This book brings together contributions from the leading researchers working in the area. The papers combine a description of the latest techniques used in modelling the economy with an account of the way that models can be used for purposes of policy analysis. The book will be of interest to students and professional economists who want a better understanding of the questions that macroeconomic models can address and the techniques used to address them.

SEAN HOLLY is Deputy Director of the Department of Applied Economics at the University of Cambridge. He worked on policy design at Imperial College and on modelling at the London Business School before taking a Chair in Sheffield and then moving to Cambridge.

MARTIN WEALE is the Director of the National Institute of Economic and Social Research. He began his career on the Cambridge Growth Project directed by Sir Richard Stone and then worked with James Meade on economic policy design.

MARTIN WEALE

SECRETARY
FRANCIS TERRY

2 DEAN TRENCH STREET, SMITH SQUARE, LONDON, SW1P 3HE

The National Institute of Economic and Social Research is an independent, non-profit-making body, founded in 1938. It has as its aim the promotion of realistic research, particularly in the field of economics. It conducts research by its own research staff and in cooperation with universities and other academic bodies.
