

Contents

<i>Preface</i>	<i>xiii</i>
<i>Acknowledgements</i>	<i>xix</i>
I A Prologue: Mostly Historical	1
1. From the Linear to the Bilinear	1
2. A Bilinear Theory	6
3. More of the Bilinear	8
4. From Bilinear to Multilinear and Fraction-linear	10
Exercises	15
Hints for Exercises in Chapter I	18
II Three Classical Inequalities	19
1. Mise en Scène: Rademacher Functions	19
2. The Khintchin L^1 - L^2 Inequality	21
3. The Littlewood and Orlicz Mixed-norm Inequalities	23
4. The Three Inequalities are Equivalent	25
5. An Application: Littlewood's $4/3$ -inequality	26
6. General Systems and Best Constants	28
Exercises	31
Hints for Exercises in Chapter II	36
III A Fourth Inequality	38
1. Mise en Scène: Does the Khintchin L^1 - L^2 Inequality Imply the Grothendieck Inequality?	38
2. An Elementary Proof	40
3. A Second Elementary Proof	43
4. $\Lambda(2)$ -uniformizability	46
5. A Representation of an Inner Product in a Hilbert Space	51
6. Comments (Mainly Historical) and Loose Ends	53

Cambridge University Press

0521650844 - Analysis in Integer and Fractional Dimensions

Contents

Exercises	57
Hints for Exercises in Chapter III	58
IV Elementary Properties of the Fréchet Variation – an Introduction to Tensor Products	60
1. Mise en Scène: The Space $F_k(\mathbb{N}, \dots, \mathbb{N})$	60
2. Examples	61
3. Finitely Supported Functions are Norm-dense in $F_k(\mathbb{N}, \dots, \mathbb{N})$	63
4. Two Consequences	67
5. The Space $V_k(\mathbb{N}, \dots, \mathbb{N})$	72
6. A Brief Introduction to General Topological Tensor Products	80
7. A Brief Introduction to Projective Tensor Algebras	82
8. A Historical Backdrop	86
Exercises	88
Hints for Exercises in Chapter IV	92
V The Grothendieck Factorization Theorem	95
1. Mise en Scène: Factorization in One Dimension	95
2. An Extension to Two Dimensions	96
3. An Application	98
4. The g -norm	100
5. The g -norm in the Multilinear Case	103
Exercises	105
Hints for Exercises in Chapter V	106
VI An Introduction to Multidimensional Measure Theory	107
1. Mise en Scène: Fréchet Measures	107
2. Examples	108
3. The Fréchet Variation	111
4. An Extension Theorem	116
5. Integrals with Respect to F_n -measures	118
6. The Projective Tensor Algebra $V_n(\mathbb{C}_1, \dots, \mathbb{C}_n)$	121
7. A Multilinear Riesz Representation Theorem	122
8. A Historical Backdrop	126
Exercises	129
Hints for Exercises in Chapter VI	133

VII	An Introduction to Harmonic Analysis	135
	1. Mise en Scène: Mainly a Historical Perspective	135
	2. The Setup	138
	3. Elementary Representation Theory	142
	4. Some History	146
	5. Analysis of Walsh Systems: a First Step	147
	6. W_k is a Rosenthal Set	151
	7. Restriction Algebras	157
	8. Harmonic Analysis and Tensor Analysis	159
	9. Bonami's Inequalities: A Measurement of Complexity	167
	10. The Littlewood $2n/(n+1)$ -Inequalities: Another Measurement of Complexity	175
	11. p -Sidon Sets	181
	12. Transcriptions	190
	Exercises	196
	Hints for Exercises in Chapter VII	202
VIII	Multilinear Extensions of the Grothendieck Inequality (via $\Lambda(2)$-uniformizability)	206
	1. Mise en Scène: A Basic Issue	206
	2. Projective Boundedness	208
	3. Uniformizable $\Lambda(2)$ -sets	209
	4. A Projectively Bounded Trilinear Functional	214
	5. A Characterization	221
	6. Projectively Unbounded Trilinear Functionals	225
	7. The General Case	227
	8. $\varphi \equiv 1$	230
	9. Proof of Theorem 19	236
	Exercises	242
	Hints for Exercises in Chapter VIII	245
IX	Product Fréchet Measures	248
	1. Mise en Scène: A Basic Question	248
	2. A Preview	249
	3. Projective Boundedness	253
	4. Every $\mu \in F_2$ is Projectively Bounded	257
	5. There Exist Projectively Unbounded F_3 -measures	258
	6. Projective Boundedness in Topological Settings	260
	7. Projective Boundedness in Topological-group Settings	264

	8. Examples	269
	Exercises	272
	Hints for Exercises in Chapter IX	276
X	Brownian Motion and the Wiener Process	279
	1. Mise en Scène: A Historical Backdrop and Heuristics	279
	2. A Mathematical Model for Brownian Motion	285
	3. The Wiener Integral	288
	4. Sub-Gaussian Systems	295
	5. Random Series	300
	6. Variations of the Wiener F_2 -measure	307
	7. A Multiple Wiener Integral	311
	8. The Beginning of Adaptive Stochastic Integration	316
	9. Sub- α -systems	320
	10. Measurements of Stochastic Complexity	322
	11. The n th Wiener Chaos Process and its Associated F -measure	325
	12. Mise en Scène (§1 continued): Further Approximations of Brownian Motion	329
	13. Random Walks and Decision Making Machines	331
	14. α -Chaos: A Definition, a Limit Theorem, and Some Examples	335
	Exercises	339
	Hints for Exercises in Chapter X	344
XI	Integrators	348
	1. Mise en Scène: A General View	348
	2. Integrators and Integrals	350
	3. Examples	357
	4. More Examples: α -chaos, $\Lambda(q)$ -processes, p -stable Motions	363
	5. Two Questions – a Preview	379
	6. An Application of the Grothendieck Factorization Theorem	385
	7. Integrators Indexed by n -dimensional Sets	388
	8. Examples: Random Constructions	396
	9. Independent Products of Integrators	397
	10. Products of a Wiener Process	402
	11. Random Integrands in One Parameter	409

<i>Contents</i>		xi
Exercises		419
Hints for Exercises in Chapter XI		424
XII A ‘3/2-dimensional’ Cartesian Product		427
1. Mise en Scène: Two Basic Questions		427
2. A Littlewood Inequality in ‘Dimension’ $3/2$		428
3. A Khintchin Inequality in ‘Dimension’ $3/2$		434
4. Tensor Products in ‘Dimension’ $3/2$		440
5. Fréchet Measures in ‘Dimension’ $3/2$		447
6. Product F -measures and Projective Boundedness in ‘Dimension’ $3/2$		451
Exercises		453
Hints for Exercises in Chapter XII		455
XIII Fractional Cartesian Products and Combinatorial Dimension		456
1. Mise en Scène: Fractional Products		456
2. A Littlewood Inequality in Fractional ‘Dimension’		458
3. A Khintchin Inequality in Fractional ‘Dimension’		470
4. Combinatorial Dimension		475
5. Fractional Cartesian Products are q -products		478
6. Random Constructions		483
7. A Relation between the dim-scale and the σ -scale		488
8. A Relation between the dim-scale and the δ -scale		495
Exercises		500
Hints for Exercises in Chapter XIII		501
XIV The Last Chapter: Leads and Loose Ends		502
1. Mise en Scène: The Last Chapter		502
2. Fréchet Measures in Fractional Dimensions		503
3. Combinatorial Dimension in Topological and Measurable Settings		516
4. Harmonic Analysis		518
5. Random Walks		521
6. α -chaos		525
7. Integrators in Fractional Dimensions		528
Exercises		531
Hints for Exercises in Chapter XIV		533
<i>References</i>		534
<i>Index</i>		547
