

## CONTENTS

<b>Preface</b>		xi
<b>Chapter I</b>	<b>NORMED LINEAR SPACE STRUCTURE AND EXAMPLES</b>	1
§1.	<b>Basic properties of normed linear spaces</b>	1
	Structure, examples, quotient spaces, continuous linear mappings, isomorphisms, Schauder bases.	
	Exercises	19
§2.	<b>Classes of example spaces</b>	24
	Finite dimensional normed linear spaces, inner product spaces, the $\mathfrak{L}_p$ -spaces ( $1 \leq p \leq \infty$ ).	
	Exercises	45
§3.	<b>Orthonormal sets in inner product spaces</b>	50
	Orthonormal bases in Hilbert space.	
	Exercises	64
<b>Chapter II</b>	<b>SPACES OF CONTINUOUS LINEAR MAPPINGS</b>	67
§4.	<b>Norming mappings and forming duals and operator algebras</b>	67
	Basic structure, dual spaces, real and complex spaces, operator algebras, unital Banach algebras.	
	Exercises	86
§5.	<b>The shape of the dual</b>	92
	Finite dimensional spaces, Hilbert spaces, application: contravariant and covariant vectors, sequence spaces, $(\mathbb{C}[a,b], \ \cdot\ _\infty)$ .	
	Exercises	110
<b>Chapter III</b>	<b>THE EXISTENCE OF CONTINUOUS LINEAR FUNCTIONALS</b>	113
§6.	<b>The Hahn–Banach Theorem</b>	113
	Proof and corollaries, the dual for subspaces.	
	Exercises	120
§7.	<b>The natural embedding and reflexivity</b>	122
	Examples of reflexive spaces, techniques to prove nonreflexivity, completion of a normed linear space.	
	Exercises	130

Cambridge University Press

978-0-521-65375-6 - Introduction to the Analysis of Normed Linear Spaces

J. R. Giles

## Contents

§8.	<b>Subreflexivity</b>	132
	The Bishop–Phelps Theorem.	
	Exercises	138
<b>Chapter IV</b>	<b>THE FUNDAMENTAL MAPPING THEOREMS FOR BANACH SPACES</b>	139
§9.	<b>Baire category theory for metric spaces</b>	139
	Baire spaces, examples using category techniques, residual subsets of a Baire space.	
	Exercises	153
§10.	<b>The Open Mapping and Closed Graph Theorems</b>	153
	Criteria for topological isomorphisms and equivalent norms.	
	Exercises	158
§11.	<b>The Uniform Boundedness Theorem</b>	163
	The Banach–Steinhaus Theorem, weak boundedness, the du Bois Reymond Theorem.	
	Exercises	169
<b>Chapter V</b>	<b>TYPES OF CONTINUOUS LINEAR MAPPINGS</b>	171
§12.	<b>Conjugate mappings</b>	171
	Structure, topological isomorphisms, applications to establish reflexivity properties.	
	Exercises	179
§13.	<b>Adjoint operators on Hilbert space</b>	181
	Basic properties, self-adjoint operators, numerical range, positive operators, normal and unitary operators.	
	Exercises	193
§14.	<b>Projection operators</b>	196
	Projections on Banach spaces, orthogonal projections on Hilbert spaces.	
	Exercises	204
§15.	<b>Compact operators</b>	206
	The algebra of compact operators on a Banach space, approximation by finite rank operators in Hilbert space and in Banach space.	
	Exercises	214

Cambridge University Press

## Contents

<b>Chapter VI</b>	<b>SPECTRAL THEORY</b>	217
§16.	<b>The spectrum</b>	217
	The spectrum in a unital normed algebra, the Spectral Mapping Theorem for polynomials.	
	Exercises	221
§17.	<b>The spectrum of a continuous linear operator</b>	222
	The spectrum in finite dimensional spaces, the spectrum in normed linear spaces, the spectrum of a conjugate operator.	
	Exercises	227
§18.	<b>The spectrum of a compact operator</b>	230
	The invariant subspace property of compact operators.	
	Exercises	235
§19.	<b>The Spectral Theorem for compact normal operators on Hilbert space</b>	237
	The Spectral Theorem, application in the solution of Fredholm integral equations.	
	Exercises	241
§20.	<b>The Spectral Theorem for compact operators on Hilbert space</b>	243
	Functional calculus, square roots of positive operators, partial isometries, the Polar Decomposition Theorem.	
	Exercises	250
<b>Appendix</b>		252
	<b>A.1 Zorn's Lemma</b>	252
	<b>A.2 Numerical equivalence</b>	254
	<b>A.3 Hamel basis</b>	256
<b>Historical notes</b>		258
<b>List of symbols</b>		269
<b>List of spaces</b>		271
<b>Index</b>		272
