978-0-521-66030-3 - Ergodic Theory and Topological Dynamics of Group Actions on Homogeneous Spaces

M. Bachir Bekka and Matthias Mayer

Table of Contents

[More information](#)

Contents

Preface	vii
I. Ergodic Systems	1
§1 Examples and Basic Results	1
§2 Ergodic Theory and Unitary Representations	13
§3 Invariant Measures and Unique Ergodicity	30
II. The Geodesic Flow of Riemannian Locally Symmetric Spaces	36
§1 Some Hyperbolic Geometry	38
§2 Lattices and Fundamental Domains	42
§3 The Geodesic Flow of Compact Riemann Surfaces	57
§4 The Geodesic Flow on Riemannian Locally Symmetric Spaces	62
III. The Vanishing Theorem of Howe and Moore	80
§1 Howe–Moore’s Theorem	81
§2 Moore’s Ergodicity Theorems	89
§3 Counting Lattice Points in the Hyperbolic Plane	93
§4 Mixing of All Orders	98
IV. The Horocycle Flow	110
§1 The Horocycle Flow of a Riemann Surface	111
§2 Proof of Hedlund’s Theorem – Cocompact Case	116
§3 Classification of Invariant Measures	120
§4 Equidistribution of Horocycle Orbits	128
V. Siegel Sets, Mahler’s Criterion and Margulis’ Lemma	139
§1 Siegel Sets in $SL(n, \mathbb{R})$	139
§2 $SL(n, \mathbb{Z})$ is a lattice in $SL(n, \mathbb{R})$	144
§3 Mahler’s Criterion	146
§4 Reduction of Positive Definite Quadratic Forms	148
§5 Margulis’ Lemma	150
VI. An Application to Number Theory: Oppenheim’s Conjecture	161
§1 Oppenheim’s Conjecture	162
§2 Proof of the Theorem – Preliminaries	163
§3 Existence of Minimal Closed Subsets	172
§4 Orbits of One-Parameter Groups of Unipotent Linear Transformations	177
§5 Proof of the Theorem – Conclusion	179
§6 Ratner’s Results on the Conjectures of Raghunathan, Dani and Margulis	184
Bibliography	189
Index	198
