<i>Preface</i>	<i>page ix</i>
<b>1 Dynamics of polynomial maps</b>	<b>1</b>
1.1 The set of escaping points for a polynomial	2
1.1.1 Typical examples of polynomials	2
1.1.2 Basic properties of the filled Julia set	7
1.2 Local behavior near a fixed point	12
1.2.1 Schröder equation for $\lambda$ with $ \lambda  < 1$	12
1.2.2 Schröder equation for $\lambda$ with $ \lambda  = 1$	16
1.3 Quadratic polynomials and the Mandelbrot set	20
1.4 Hausdorff dimension and capacity	27
1.4.1 Hausdorff measure	27
1.4.2 Hyperbolicity	29
1.4.3 Capacity	32
1.5 Polynomial-like mappings	35
<b>2 The Fatou set and the Julia set</b>	<b>41</b>
2.1 Holomorphic endomorphisms of planar domains	42
2.1.1 Hyperbolic domains	42
2.1.2 Normal families	45
2.1.3 The Julia set and the Fatou set	47
2.1.4 The classification theorem	49
2.2 Value distribution theory	54
2.2.1 The first main theorem and the characteristic function	54
2.2.2 The second main theorem and direct consequences	57
2.2.3 More on entire functions	62
2.3 Basic properties of the Julia set	64
2.3.1 Other characterizations of the Julia set	64
2.3.2 The first fundamental theorem	69

vi	<i>Contents</i>	
2.4	Singular values and Fatou components	73
2.4.1	Singular values and periodic components	73
2.4.2	The Teichmüller space of complex dynamics	77
2.4.3	The second fundamental theorem	80
<b>3</b>	<b>Dynamics of entire functions</b>	<b>85</b>
3.1	Basic dynamical properties of entire functions	85
3.1.1	Topological properties of the Fatou set and the Julia set	86
3.1.2	Special classes of entire functions	88
3.1.3	Escaping points	93
3.2	The exponential family	96
3.2.1	The Cantor bouquet	97
3.2.2	The size of the Julia set	100
3.2.3	The representation space	105
3.3	Topological completeness for decorated exponential families	106
3.4	Examples	112
3.4.1	Wandering domains	112
3.4.2	Logarithmic lifts and Baker domains	119
<b>4</b>	<b>Dynamics of rational functions</b>	<b>124</b>
4.1	Topics on the Newton method	124
4.1.1	The Newton method	124
4.1.2	Iterative algorithms and computability over the reals	127
4.2	Fundamental theorems of Fatou, Julia and Sullivan	132
4.3	Theorems of Shishikura	141
4.4	The Julia sets of hyperbolic rational functions	149
<b>5</b>	<b>Kleinian groups and Sullivan's dictionary</b>	<b>163</b>
5.1	The limit sets and the ordinary sets	163
5.2	Sullivan's dictionary	173
5.3	Stability	179
5.4	Conformal density and Hausdorff dimension	187
<b>6</b>	<b>Dynamics of holomorphic maps of several variables</b>	<b>198</b>
6.1	Preparation from complex analysis of several variables	198
6.2	Local theory at attracting or repelling fixed points	209
6.3	Holomorphic automorphisms of $\mathbb{C}^2$ and Fatou–Bieberbach domains	214
6.4	Behavior at a fixed point of saddle type	220
<b>7</b>	<b>Dynamics of generalized Hénon maps</b>	<b>225</b>
7.1	Polynomial automorphisms of $\mathbb{C}^2$ of degree 2	225

Cambridge University Press  
 978-0-521-66258-1 - Holomorphic Dynamics  
 S. Morosawa, Y. Nishimura, M. Taniguchi and T. Ueda  
 Table of Contents  
[More information](#)

<i>Contents</i>		vii
7.2	Sets of escaping points and non-escaping points	235
7.3	Structure of the set of escaping points	241
7.4	The set of non-escaping points and symbolic dynamics	251
<b>8</b>	<b>Pluripotential theory of polynomial automorphisms</b>	<b>263</b>
8.1	Positive currents	264
8.2	Lelong's theorem	270
8.3	Fundamental properties of polynomial automorphisms	276
8.4	Pluricomplex Green functions	288
8.5	Stable and unstable convergence theorems	295
8.6	Currents for analytic subsets	304
<b>9</b>	<b>Dynamics of polynomial automorphisms</b>	<b>310</b>
9.1	The stable and unstable sets	310
9.2	Applications of the convergence theorems	318
9.3	Hyperbolic polynomial automorphisms	321
	<i>Bibliography</i>	329
	<i>Index</i>	335
