SUBJECT INDEX

It is intended that this index serve as a reader's guide through the book rather than give a detailed classification of the contents. The principal subjects are listed under key-word headings. The further subdivision under these key-words will aid in locating specific aspects of the subject.

- anelastic deformation, *see also* *Q*
 Chandler wobble period, 208
 complex modulus, 15
 dissipation mechanisms, 13–18
 frequency dependence, 15–17,
 19–20, 198
- astronomical observations, *see also* time
 accuracy, 75–7, 81–2, 88, 95
 ancient, 304–14
 errors due to catalogue, 82, 94, 187
 instrumentation, 64–6
 latitude, 63
 lunar orbit evolution, 299–301
 Moon, Sun and planets, 69–73
 telescope, 301–3
- atmospheric circulation, *see* winds *and*
 zonal angular momentum
- atmospheric excitation functions, *see*
also atmospheric pressure
 Chandler wobble, 238–243
 long-period fluctuations in l.o.d.,
 193–4, 275–8
 seasonal changes in l.o.d., 173–9,
 181–90
 seasonal changes in wobble, 150–9,
 179–81
- atmospheric pressure
 changes in inertia tensor, 152
 excitation of Chandler wobble, 238
 excitation functions, 150–9, 239, 276
 inverted barometer, 148–50
 long-period fluctuations, 279
 monsoon, 153
 ocean response 148–50
 seasonal fluctuations, 148
 water vapour pressure, 151
- atmospheric tides
 ocean response, 131–2
 pressure variations, 129
 radiational tide, 131
- celestial mechanics
 coordinate transformation, 113
 dynamics of lunar orbit, 290–9
 Lagrange equations, 133
 orbital elements, 113, 115
 tidal perturbations in satellite orbit,
 134
 tidal perturbations in lunar orbit, 292,
 294
- centre of mass, seasonal shift, 87, 147
 Chandler wobble, *see also* Eulerian
 precession
 atmospheric excitation, 238–43
 core effect on period, 197, 201–3
 discovery, 85–6, 195
 dissipation in core, 208–11
 dissipation in mantle, 206, 208
 dissipation in oceans (*see* pole tide)
 elastic mantle and period, 198–201
 energetics, 203–5
 Love number, 197, 219
 period, 196–8, 219
Q, 19, 195, 205–6, 217
 resonance with annual wobble, 45–6
 seismic excitation, 220–3 (*see also*
 seismic excitation)
 spectrum, 97–104
 variation in amplitude and phase,
 100, 219
- core, *see also* magnetic field *and* core–
 mantle coupling
 Brunt–Vaisala frequency, 22
 density, 22
 dynamics, 23
 long-period oscillations, 23
 seismic structure, 21–2
 viscosity, 24, 209–10
- core–mantle coupling,
 Chandler wobble, 201–2
 dissipative, 208

Cambridge University Press

SUBJECT INDEX

- core–mantle coupling—*cont.*
 electromagnetic and l.o.d., 59, 248–54
 electromagnetic and wobble, 263–6
 general formulation, 247
 inertial or pressure, 38, 201–2, 246
 observational evidence, 258–63
 passive, 246
 for seasonal oscillations, 180–1, 187, 192
 topographic, 246, 266–8
 viscous, 208–11, 247
- decade fluctuations in l.o.d., *see also*
 core–mantle coupling
 astronomical evidence, 173–80
 atmospheric excitation, 193, 275–7
 Brouwer's model, 78
 Brown's model, 78
 oceanic excitation, 276–8
 relation with climate, 4, 278–81
 seismic excitation, 281–3
 solar wind, 284
 spectral investigations, 79–80
- diurnal wobble, 33, 39, 196
- dynamics of rotation
 angular momentum, 30, 33, 291, 353
 Euler's equations, 30–1
 Liouville equation, 34
 non-rigid motion, 33–36
 perturbation equations, 35
 Poincaré representation, 33–4, 40
 rigid body rotation, 30–33
 separation of wobble and l.o.d., 37
- Earth, *see also* core, mantle, gravity field
 dimensions and shape, 27
 early evolution, 391–3
 free oscillation, 8, 18, 23
 Kelvin model, 10
 seismic model, 11
- elastic deformations, *see also* Love numbers
 boundary conditions, 8–9
 equations of motion, 6
 general solution, 7
 load Love numbers, 10
- energy dissipation in oceans, *see also*
 pole tide
 energy dissipation in oceans—*cont.*
 bottom friction, 218, 321–2, 220–1
 breaking of waves, 331
 energy equation, 320
 energy flux, 322–3, 330
 estimates of global dissipation, 327–29
 internal tides, 331–4
 Q , 331
 tidal dissipation in past, 389–90
 turbulent friction, 125, 129, 332
 virtual internal friction, 125
 work integral, 321, 324–6
- Eulerian precession, *see also* Chandler wobble
 deformable body, 42–4
 dynamic equations, 31
 frequency, 35
 kinematic equations, 32
- excitation functions, *see also under entries for specific mechanisms*
 angular momentum versus torque, 48, 166–7
 Cartesian and spherical coordinates, 48–9
 comparison with astronomical data, 47, 60
 definition, 35
 modification of by mantle elasticity, 43
 rotational deformations, 42
 schematic, 52–60
- gravity field
 density anomalies, 9
 departures from hydrostatic equilibrium, 27, 345–6
- dynamical oblateness, 26, 27
 moments of inertia, 25
 spherical harmonics expansion, 25
 Stokes potential coefficients, 25, 27
- groundwater
 balance, 160
 conservation of water mass, 161
 excitation functions, 162
 variability, 242, 278
- inertia tensor, 25–6, 30
 polar moment, 27

- inertia tensor—*cont.*
 rotational deformation, 41
 temporal variations, 29
 tidal deformation, 107
- international time and latitude services
 Bureau International de l'Heure (BIH), 68, 80–2, 88
 comparison of BIH and ILS, 88–90
 International Latitude Service, (ILS), 36, 86–7
 International Polar Motion Service (IPMS), 86, 90
- Legendre polynomials
 addition theorem, 113
 definition, 25
 normalisation, 26
 products, 121
- length-of-day (l.o.d.) *see also* tidal accelerations
 accuracy, 75–7, 81
 amplitude spectrum, 3, 77, 84
 decade fluctuations, 73
 definition, 63
 high-frequency and irregular changes, 84–5
 historical records, 2, 299–314
 new observation techniques, 105
 paleontological evidence, 388–9
 seasonal fluctuations, 82, 166–70, 173–9
 secular acceleration, 289, 337–9
 tidal variations, 138–42
- Love numbers
 Chandler, 208, 219
 complex, 21
 definition, 10
 fluid, 28–9
 for elastic Earth, 12–13
 frequency dependence, 18, 20
 load, 10, 50
 mantle structure, 12
 Maxwell body, 21
 observations, 111, 192
 satellite observations, 135–6
 secular, 29
 tidal effective, 293
- lunar orbit evolution
 dynamics of evolution, 290–9
- lunar orbit evolution—*cont.*
 eccentricity, 336, 353
 energetics, 297
 evolution due to ocean tides, 293–4
 future evolution, 287, 353
 geological constraints, 391–4
 inclination, 336, 354–7, 398–400
 past evolution, 286, 352–7, 389–90
 time-scale problem, 398
- magnetic field
 archeomagnetic, 254
 at core–mantle boundary, 249, 251, 258
 Eurasian anomaly, 256, 263
 long-period fluctuations, 255
 paleomagnetism, 346
 reversals, 342
 secular variation impulses, 255
 solar cycle, 255–6
 South African anomaly, 254
 toroidal field, 249–59
- mantle
 anelasticity, 16–17
 electrical conductivity, 254–8
 seismic velocities, 12
 Q , 18–19, 340–1
 viscosity, 345, 351
- meteorological excitation
 atmospheric pressure, 150–9
 centre of mass, 87, 147
 comparison with l.o.d., 8, 181–90
 comparison with wobble, 179–81
 groundwater, 162
 high frequency, 190–2
 low frequency, 193–4
 seasonal, variability of, 97, 185
- Moon, *see also* lunar orbit
 evolution, 392
 formation, 394–8
 origin, 394–98
 Q , 296
 tides, 295–6
- new observation techniques
 long-baseline interferometry, 106
 lunar laser ranging, 105
 satellite tracking, 104–5

SUBJECT INDEX

- nutation, *see also* Eulerian precession
 and diurnal wobble
 constraint on core viscosity, 24
 fluid core effects, 1, 37–9
 motion of rotation axis in space, 32–3
 observational evidence, 1
- ocean–continent functions, 51–2, 121,
 142, 164, 268
- ocean current
 Bering Sea, 330
 Circum-Antarctic, 165
 excitation function, 166
 geostrophic, 164–5
 tidal, 321–2, 332
- ocean tide, *see also* pole tide
 due to rotation change, 144
 effect on rotation, 127–8, 140–2, 145,
 185
 equilibrium, 121–4, 138
 frictional forces, 125
 interaction with solid tide, 111
 Laplace equations, 319
 models, 124–129
 near resonance, 129, 293, 334
 Q, 331
 satellite observations, 139
 spherical harmonic expansion, 119–
 21
- paleontological observations of l.o.d.
 bivalve acceleration, 378–81
 bivalve growth rhythms, 371–3
 coral accelerations, 370–1
 coral growth rhythms, 363–6
 paleoaccelerations, 388–9
 paleontological clocks, 358–62
 stromatolites, 381–5
 Precambrian stromatolites, 385–6
- plate tectonics
 effect on polar motion, 92–4
 hypothesis, 347
 relative motion, 347–50
 separation from polar wander, 342
- polar motion, *see also* Chandler wobble,
 meteorological excitation *and*
 polar wander
 amplitude spectrum, 2, 90–2, 97–9
 comparison of results, 89–90
- polar motion—*cont.*
 deconvolution, 61
 early search, 85–6
 errors in data, 95–6
 impulse response functions, 60
 Kimura term, 87, 147
 low-frequency variations, 90–1, 94,
 245, 273–5
 observations, 86–9
 paleomagnetic evidence, 346–7
 secular, 2, 91, 94, 274–5, 282, 285
 seasonal variations 3, 95–7
 tectonic displacements of stations,
 92–4
 tidal variations, 138–142
- polar wander
 adjustment of equatorial bulge, 344–
 5
 Gold's beetles, 343–4, 351
 mantle viscosity, 345, 351
 paleomagnetism, 346–51
 Pleistocene deglaciation, 285
 separation from continental drift,
 342, 350–1
- pole tide
 atmospheric, 239
 dissipation, 216–8
 global representation, 142–144
 oceanic, 212–4
 seasonal, 108, 142
 Chandler wobble period, 215
 post-glacial rebound, 20, 285, 289
- precession, *see also* Eulerian precession
 constant, 27
- Q*, *see also* anelastic deformation
 definition, 14
 frequency dependence, 18–20, 206,
 208, 219
 linear damped system, 44
 mantle, 340–1
 Moon, 351
 Maxwell and Kelvin-Voigt solids,
 21
 structure of Earth, 18–19
- reference systems
 inertial, 32
 motion of stations, 92–4

- reference systems—*cont.*
 relation between inertial and terrestrial, 32
 terrestrial, 36–7
- rotational deformation
 adjustment of equatorial bulge, 344–4
 excitation functions, 42
 inertia tensor, 41
 potential of centrifugal force, 40
 radial deformation, 40
- sea level, *see also* ocean tide and pole tide
 decade fluctuations, 274–5
 deduced from ice budget, 272–3, 278
 excitation function, 58, 163–4, 269–74
 exchange with groundwater, 161–2
 exchange with ice sheets, 268
 long-term variations, 270–2
 response to air pressure, 148–50
 steric changes, 163–4
 water temperature, 278
- seismic excitation
 aseismic contribution, 236–8, 242–3
 comparison with astronomical data, 233–4, 243
 cumulative, 223, 233–4
 earthquake parameters, 230, 235
 excitation function, 57
 l.o.d., 281–3
 moment-magnitude relation, 230–2, 235–8
 silent earthquakes, 237
 static displacement field, 229
 Tsunami earthquakes, 237–8
 solar torque, 246, 284
- tidal accelerations, *see also* tidal phase lag and energy dissipation in oceans
 astronomical evidence, 69–71, 301–3
 constancy of lunar acceleration, 338–340
 Earth's secular acceleration, 3, 69, 289–91, 314–8, 336–8
- tidal accelerations—*cont.*
 historical evidence, 304–14
 lunar acceleration in longitude, 3, 17, 292, 300, 344–6
 non-tidal acceleration, 289
 paleontological evidence, 370–1, 378–81, 388–9
 satellite results, 335
- tidal phase lag
 age of tide, 129
 correction for atmospheric tide, 132
 equivalent lags, 294–5
 gravity and tilt tide, 119
 satellite motion, 118, 137–8
- tide, *see also* Love numbers, ocean tide and pole tide
 changes in rotation, 4, 67, 84, 107–8, 138–40, 145, 182
 deflections of vertical, 81, 108
 generating potential, 112, 116–18
 lag in response, 118–19
 loading of crust, 109
 observations, 111–12
 potential, 118–19
 relative importance of solid and ocean, 107
- time
 atomic time, 68
 clocks, 66, 67
 ephemeris time, 68
 universal time, 62–3, 66, 73
- wind, *see also* zonal angular momentum
 angular momentum versus torque, 166–7
 seasonal fluctuations in zonal wind, 172–3
 torques and l.o.d., 169–70
 torques and wobble, 170
- zonal angular momentum
 annual, 173–4
 biennial, 175–8, 187–90
 semi-annual, 174
 variability of biennial, 179, 189–90
