

## Contents

<i>Preface</i>	xiii
<b>1 Angular momentum and transition dipole moment</b>	<b>1</b>
1.1 Anisotropy of angular momenta: ideas and methods	1
1.2 The angular momentum of a molecule	8
1 Hund's case (a) coupling	9
2 Hund's case (b) coupling	10
3 Hund's case (c) coupling	11
1.3 Transition dipole moment: basic concepts	13
1.4 Absorption of light of different polarization	15
<b>2 Excited state angular momenta distribution</b>	<b>22</b>
2.1 Absorption and emission probability	22
2.2 Probability density of angular momenta distribution	26
2.3 Expansion of probability density over multipoles. Coherence	29
2.4 Intensity and polarization of fluorescence	35
2.5 Alignment and orientation studies (experimental)	43
<b>3 Ground state angular momenta polarization</b>	<b>49</b>
3.1 Angular momenta polarization via depopulation	49
1 Balance equations: classical description	53
2 Balance equations: quantum mechanical treatment	57
3.2 Ground state effects in fluorescence	63
1 Classical approach	64
2 Quantum mechanical description	68
3.3 Examples of experimental studies	69
1 Excitation and relaxation parameters	69
2 Detection of ground state momenta polarization	77
3.4 Fluorescent population of vibronic levels	83
3.5 Laser-interrogated dichroic spectroscopy	89
3.6 Transient process	92
1 Dynamic method	92

x	<i>Contents</i>	
	2 Relaxation kinetics of polarization moments	93
	3 Fly-through relaxation: ground state	95
	4 Fly-through relaxation: excited state.	100
<b>4</b>	<b>Effect of external magnetic field on angular momenta distribution</b>	<b>104</b>
4.1	Basic concepts	104
4.2	The Hanle effect in molecules: excited state	109
	1 Calculation of observed signals	109
	2 Experimental studies	116
4.3	Hanle effect: ground state	120
	1 Depopulation effect	120
	2 Fluorescence pumping	130
4.4	Quantum beats	133
	1 Excited state: weak excitation	133
	2 Depopulation quantum beats	140
	3 Beats in laser-interrogated dichroism	144
	4 Beat resonance	146
4.5	The molecular $g$ -factor	149
	1 'Pure' Hund's cases	151
	2 Landé factors for the $^1\Sigma$ states	153
<b>5</b>	<b>General equations of motion for arbitrary <math>J</math> values</b>	<b>160</b>
5.1	Equation of motion for the density matrix	160
5.2	Electric field effect on fluorescence of molecules	163
5.3	Equations of motion for polarization moments	168
5.4	Transition from alignment to orientation. Weak excitation	175
	1 General consideration	176
	2 An example: quadratic Stark effect	180
	3 An example: quadratic Zeeman effect	181
5.5	Examples of handling the equations of motion of polarization moments	186
	1 Linear approximation: excited state Hanle effect	187
	2 Ground state Hanle effect	189
	3 Dynamic Stark effect	190
5.6	Asymptotic equations for angular momenta	195
5.7	Equations of motion of probability density and of classical polarization moments	199
5.8	General restrictions for the relaxation rates of polarization moments	202
<b>6</b>	<b>Other methods of alignment and orientation of molecules</b>	<b>209</b>
6.1	Photodissociation and photoionization	209
	1 The photodissociation process	209
	2 Photoionization	219
6.2	Collisional processes	221
	1 Bulk collisions	222

<i>Contents</i>		xi
2	Alignment in the beam	224
3	Collisions in crossed beams	227
4	Collisions with a surface	229
6.3	Orientation in static inhomogeneous fields	231
6.4	Orientation by homogeneous electric field	234
	<b>Appendix A: Vector calculus in cyclic coordinates</b>	<b>242</b>
	<b>Appendix B: Spherical functions <math>Y_{KQ}(\theta, \varphi)</math> and some of their properties</b>	<b>246</b>
	<b>Appendix C: The Clebsch–Gordan coefficients. <math>6j</math>- and <math>9j</math>-symbols</b>	<b>248</b>
	<b>Appendix D: Various methods of introducing polarization moments</b>	<b>253</b>
D.1	Polarization moments in quantum physics	254
D.2	Real components of the density matrix	260
D.3	Expansion of probability density	262
